1 Introduction

1.1 California Environmental Quality Act Compliance

The California Environmental Quality Act (CEQA) allows a lead agency to avoid repeating analyses that were already provided in a certified Environmental Impact Report (EIR) for a development project that is consistent with the General Plan. California Public Resources Code Section 21083.3 and its parallel CEQA Guidelines provision, Section 15183, provide for streamlined environmental review for projects consistent with the General Plan for which an EIR was certified. The environmental analysis in this Initial Study (IS) relies on sections 15168 and 15183 of the CEQA Guidelines, which govern program EIRs and projects consistent with a general plan or community plan. Under Section 15183 of the CEQA Guidelines, where a project is consistent with the use and density established for a property under an existing general plan or zoning ordinance for which a city has already certified an EIR, no additional environmental review is required "except as might be necessary to examine whether there are project-specific significant effects which are peculiar to the project or its site."

If these requirements are met, the examination of environmental effects is limited to those that the lead agency determines, in an Initial Study or other analysis (State CEQA Guidelines Section 15183[b]):

1. are peculiar to the project or the parcel on which the project would be located;

2. were not analyzed as significant effects in a prior EIR on the zoning action, general plan, or community plan, with which the project is consistent;

3. are potentially significant off-site impacts and cumulative impacts which were not discussed in the prior EIR prepared for the general plan, community plan, or zoning action; or

4. are previously identified significant effects which, as a result of substantial new information which was not known at the time the EIR was certified, are determined to have a more severe adverse impact than discussed in the prior EIR.

This Modified IS or checklist has been prepared to identify and assess the anticipated environmental impacts of the Daniel Center Project (proposed project). This document relies, in part, on the City of Manteca's (City) General Plan and its associated EIR (SCH #2002042088). This Initial Study (IS) has been prepared to determine if project-specific impacts would occur that were not adequately covered in the previously certified EIR. The Manteca City Council adopted the General Plan and certified the associated EIR in 2003 (City of Manteca 2003a, 2003b). The City Council adopted updates to its Circulation, Air Quality, Housing, and Safety Elements from 2010 to 2016 (City of Manteca 2010, 2011, 2015, 2016). The General Plan EIR is a "Program" EIR prepared pursuant to State CEQA Guidelines Section 15168 that reviewed environmental impacts associated with future development and buildout within the City's planning area that would be accommodated by the General Plan. A Program EIR can be used for subsequent projects implemented within the scope of the program/plan. Typically, site-specific or new significant impacts that were not addressed in the Program EIR would be evaluated in an Initial Study, leading to preparation of a Negative Declaration, Mitigated Negative Declaration, or EIR. Mitigation measures adopted for the General Plan also would be a part of future development projects, as relevant, and supplemented, as may be necessary, with any site-specific mitigation measures identified in the project-specific environmental review process.

The City of Manteca is currently undertaking a General Plan Update, which proposes to maintain the General Commercial land use designation for the project site. The General Plan Update is not yet adopted; therefore, this IS analyzes consistency with the adopted 2003 General Plan and General Plan EIR.

The proposed project's land uses and development assumptions are consistent with the City's General Plan. Therefore, the lead agency (City of Manteca) is not required to examine environmental impacts that have already been adequately evaluated in the previously certified General Plan EIR if the project would not lead to new or substantially greater environmental impacts, or to a significant impact that is peculiar to the project or to the project site.

As documented herein, since the certification of the City's General Plan EIR in 2003, there have been no significant changes in the physical environment that could result in a new or substantially increased impacts related to the proposed project.

This IS serves to evaluate whether the environmental impacts of the proposed project are adequately addressed in the General Plan EIR. This IS indicates whether the proposed project would result in a significant impact that: (1) is peculiar to the project or the project site; (2) was not identified as a significant effect in the General Plan EIR; or (3) are previously identified significant effects which as a result of substantial new information that was not known at the time that the General Plan EIR was certified, are determined to have a more severe adverse impact than discussed in the General Plan EIR. Such impacts, if any, will be evaluated in an EIR (CEQA Guidelines Section 15183).

2 Project Description

2.1 Project Location

The Daniels Center Project or project site includes a 1.75 acres site at 2125 Daniels Street in the western portion of the City of Manteca, in the northwest quadrant of the Airport Way and Daniels Center intersection (Assessor's Parcel Number 241-310-86). The project site is vacant and undeveloped but has previously been disturbed by agricultural development. According to the California Department of Conservation, the project site is designated as Farmland of Local Importance (DOC 2020). Street trees are present along Daniels Street but no trees are present within the site. Streetlights are also present along Daniels Street and Airport Way outside of the site. There is a utility pole at the southeastern corner of the project site connecting to power lines outside of the site. Figure 1 shows the location of the project site. The project parcel site is designated General Commercial and is also zoned General Commercial (CG). The land uses and general infrastructure assumptions of the project site are consistent with the City's General Plan and have been evaluated in the General Plan EIR (City of Manteca 2019).

The project site is bounded by Airport Way to the east and Daniels Street to the south, and undeveloped properties to the west and north, as shown on Figure 1. A shopping center containing a Costco store, a Kohl's store, and other retail shops is along the southern side of Daniels Street opposite the project site. Several restaurants and a gas station occupy the property at the southeastern corner of the Daniels Street and Airport Way intersection, southeast of the project site. Vacant property exists along the eastern side of Airport Way opposite the project site, with a residential neighborhood along the east side of Fishback Road. One undeveloped parcel of land is north of the project site, with rural residences on the next adjacent two parcels north of the project site. A baseball fields complex occurs approximately 1,000 feet from the western boundary of the project site.

2.2 Project Characteristics

The proposed project would consist of a 3,400-square-foot convenience store, a 2,300-square-foot quick-service restaurant, a gas station with 10 dispensers that accommodates 20 covered fuel pumps, and a drive-through car wash. The project would also include bioretention basins along the western, eastern, and southern areas of the project site. Figure 2 illustrates the Site Plan for the proposed project.

Access, Circulation, and Parking

Access to the project site would be provided by two new right-in/right-out access driveways: one on Airport Way and one on Daniels Street. Pedestrian access to the project site is via existing sidewalks on Airport Way and Daniels Street. A total of 37 (39 parking spaces, per the Site Plan dated 6-14-21)parking spaces would be provided, including 3 designated clean air vehicle parking and electric vehicle charging spaces, as required by the California Green Building Standards Code (California Code of Regulations [(CCR]) Title 24 Part 11). The project would also provide six racks for bicycle parking.

Infrastructure

The project would include connections to the City's storm drain, water and wastewater utilities, described as follows.

- Storm Drainage: The proposed project would connect to use the City's storm drainage system. Existing storm drain infrastructure is located on Daniels Street. The project would install onsite storm drainpipes to collect and convey stormwater into the City's system.
- Water: Existing City water lines are located on Daniels Street. The project would install on-site water lines to connect to the City's system to provide domestic water to serve the project.
- Wastewater: Existing wastewater infrastructure is located on Daniels Street. The project would install on-site wastewater lines to connect to the City's system.

Landscaping

Project landscaping would include new trees, shrubs and ground cover with a new irrigations system that meets the current water usage requirements.

Energy Conservation

The project is proposing energy conservation components which include electric vehicle charging stations, LED lighting (interior and exterior), and exterior fuel canopy lights will adjust to 30% brightness when cars are not present. In addition, the project is required to meet all requirements stated in the California Green Building Standards Code (CCR Title 24 Part 6 and Part 11).

2.3 Project Construction and Phasing

If the project is approved, construction is anticipated to commence in March 2023 and last 12 months. It is anticipated that the project grading would be balanced onsite. All construction equipment and construction worker vehicles would be staged (parked) on site during construction and meet all the requirements of CCR Title 24 Part 11.

2.4 Project Approvals

Project approvals required from the City for this project include the following:

- Adoption of updated Mitigation Monitoring and Reporting Program (MMRP), confirming applicable mitigation from the General Plan EIR

2.5 California Environmental Quality Act Compliance

This IS provides the evidence required that the General Plan environmental determinations are applicable to a portion of this project.

The following is an overview of the steps followed for the environmental review of the proposed project.

- Review the proposed project against the impact analysis and mitigation measures contained in the City's General Plan EIR.
- Identify any previously adopted mitigation measures from the General Plan EIR that apply to the proposed project.

- The primary source reviewed for the preparation of this IS is the City's General Plan EIR and associated technical studies, available at the City's website at https://www.manteca.gov/departments/development-services/planning/planning-division-documents/-folder-205

THIS PAGE INTENTIONALLY LEFT BLANK.

3 Evaluation of Environmental Impacts

In reviewing the site-specific information provided for this project, the City has analyzed the potential environmental impacts created by this project and determined that development of the project site with a gas station has been previously evaluated in the General Plan EIR. Therefore, on the basis of the following initial evaluation, we find that the proposed project is part of the program analyzed in the General Plan EIR and consistent with the General Plan EIR. Based on the findings of this Initial Study, project-specific impacts and cumulative impacts would be less than significant or mitigated to a less-than-significant level through compliance with General Plan policies or mitigation measures provided in the General Plan EIR. No new mitigation is required. Therefore, no further environmental review is required under either CEQA Guideline Section 15183.

☐ Aesthetics	☐ Agriculture and Forestry Resources	☐ Air Quality
☐ Biological Resources	☐ Cultural Resources	☐ Energy
☐ Geology and Soils	☐ Greenhouse Gas Emissions	☐ Hazards and Hazardous Materials
☐ Hydrology and Water Quality	☐ Land Use and Planning	☐ Mineral Resources
☐ Noise	☐ Population and Housing	☐ Public Services
☐ Recreation	☐ Transportation	☐ Tribal Cultural Resources
☐ Utilities and Service Systems	☐ Wildfire	☐ Mandatory Findings of Significance

Determination (To be completed by the Lead Agency)

On the basis of this initial evaluation:

☐ I find that the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.

☐ I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.

☐ I find that the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.

☐ I find that the proposed project MAY have a "potentially significant impact" or "potentially significant unless mitigated" impact on the environment, but at least one effect (1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and (2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.

☒ I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier ENVIRONMENTAL IMPACT REPORT or NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier ENVIRONMENTAL IMPACT REPORT or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.

Date

Evaluation of Environmental Impacts

The following contains a modified environmental checklist based on the environmental checklist included in Appendix G of the CEQA Guidelines. This modified checklist (i.e., IS) is used to describe the impacts of the proposed project. A discussion follows each environmental issue identified in the checklist.

For this checklist, the following designations are used in order to determine consistency with the General Plan EIR:

Prior EIR Determination:

Significant Impact Peculiar to the Project or Project Site: An impact that could be significant due to something peculiar to the project or the project site that was not previously identified in the General Plan EIR. If any potentially significant impacts are identified, an EIR must be prepared that analyzes those impacts.

Significant Impact Due to New Information: Any impact that would be considered significant based on new information that was not known at the time the EIR was prepared. If any significant impacts are identified, an EIR must be prepared that analyzes those impacts.

Impact Adequately Addressed in General Plan EIR: Impacts previously evaluated in the City's General Plan EIR that would not change from what was evaluated previously. This designation applies where the project would not result in a new significant impact, a substantially increased significant impact, or a peculiar impact that was not analyzed in the General Plan EIR.

3.1 Aesthetics

	Prior EIR Determination	Significant Impact Peculiar to the Project or the Project Site	Significant Impact due to New Information	Impact Adequately Addressed in General Plan EIR
I. AESTHETICS – Except as provided in Public Resources Code Section 21099, would the project:				
a) Have a substantial adverse effect on a scenic vista?	Significant and Unavoidable	☐	☐	☒
b) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?	N/A	☐	☐	☒
c) In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?	Significant and Unavoidable	☐	☐	☒

	Prior EIR Determination	Significant Impact Peculiar to the Project or the Project Site	Significant Impact due to New Information	Impact Adequately Addressed in General Plan EIR
d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?	Less than Significant with Mitigation	☐	☐	☒

a) Would the project have a substantial adverse effect on a scenic vista?

The General Plan EIR determined that buildout of the General Plan would have a potentially significant impact on scenic vistas because new development would occur near the edge of the City boundaries, primarily in agricultural areas. It was anticipated that this new development would also be visible from locations within the community, from highway overpasses, and nearby unincorporated areas. The General Plan EIR sets forth Mitigation Measure (MM) AV-1.1 to reduce the severity of the impact by requiring new development to maximize the potential for open space and visual experiences. However, the General Plan EIR concluded that the residual significance would be significant and unavoidable (City of Manteca 2003a).

The proposed project would occur in an area developed with general commercial uses. A shopping center with large retail stores is located along the southern side of Daniels Street opposite the project site, and several restaurants and a gas station occur at the southeastern corner of the Daniels Street and Airport Way intersection, southeast of the project site. The proposed project is not located in the more rural areas near the City limits, would be consistent with the current visual character of the area, and would not disturb views of agricultural lands or other scenic vistas. Therefore, MM AV-1.1 is not applicable and the proposed project would not result in new or more severe impacts than what was previously disclosed in the General Plan EIR. No additional analysis is required.

b) Would the project substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?

The General Plan EIR did not directly address State Scenic Highways. However, there are no Officially Designated or Eligible State Scenic Highways within the General Plan planning area (Caltrans 2019). Therefore, there is no possibility of substantial damage to the viewshed of a State Scenic Highway and no impact would occur. The proposed project would not result in new or more severe impacts than what was previously disclosed in the General Plan EIR. No additional analysis is required.

c) In non-urbanized areas, would the project substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?

The General Plan EIR concluded that buildout of the General Plan would have a potentially significant impact on visual character. The General Plan EIR includes MM AV-2.1 to reduce the severity of the impact by promoting the provision of public and private open space within urbanized parts of the City to provide visual contrast within the built environment and to provide for the recreational needs of residents. However,

the General Plan EIR concluded that the residual significance would be significant and unavoidable (City of Manteca 2003a).

As previously discussed, the proposed project would be consistent with the current visual character of the area. The project site is located within an urbanized area, which includes incorporated cities of at least 100,000 persons or with a population of less than 100,000 persons if the population of that city and not more than two contiguous incorporated cities combined equals at least 100,000 persons. As of 2021, the City of Manteca has a population of approximately 85,000, but the City is contiguous with the City of Stockton, which has a population of approximately 322,000 (U.S. Census Bureau 2021). The project site is consistent with the underlying zoning and land use designation of General Commercial (City of Manteca 2019), which provides for wholesale, warehousing (wholesale and warehousing are not allowed in GC), and heavy commercial uses; highway-oriented commercial retail; public and quasi-public uses; and similar compatible uses. There would be no project components taller than the height limit of 45 feet in the General Commercial Zone (Section 17.26.020 of the City's Municipal Code). The convenience store would be the tallest building of the project site, with columns reaching 29 feet in height. There are also no minimum open space requirements for the General Commercial Zone; therefore, MM AV-2.1 is not applicable to the proposed project. The proposed project would not result in new or more severe impacts than what was previously disclosed in the General Plan EIR. No additional analysis is required.

d) Would the project create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?

The General Plan EIR concluded that buildout of the General Plan would have a potentially significant impact in terms of introducing new sources of substantial light or glare. The General Plan EIR set provides MM AV 3.1 to reduce the severity of the impact by requiring the use of downward-facing lighting to reduce the potential for trespass onto adjacent properties. The General Plan EIR concluded that the residual significance would be less than significant after implementation of mitigation (City of Manteca 2003a)

The area surrounding the project site is urbanized and there are existing sources of light and glare created by streetlights, car headlights, and interior and exterior lighting from buildings. The proposed project would create additional sources of light and glare from car headlights accessing the project site, as well as interior and exterior lighting from the fuel pumps and proposed buildings. However, the proposed project would be required to implement MM AV-3.1 and provide minimal but appropriate levels of lighting, as well as full cut-offs or shielding to limit light trespass. Therefore, the proposed project would not result in new or more severe impacts than what was previously disclosed in the General Plan EIR. No additional analysis is required.

General Plan EIR Mitigation Measures Applicable to the Proposed Project

Mitigation Measure AV-3.1

The Community Design Element of the General Plan provides the following policies to mitigate the degradation of the existing night sky amenity in the City (City of Manteca 2003b):

CD-P-44 Provide minimal levels of street, parking, building, site, and public area lighting to meet safety standards and provide direction.

CD-P-45 Provide directional shielding for all exterior lighting to minimize the annoyance of direct or indirect glare.

CD-P-46 Provide automatic shutoff or motion sensors for lighting features in newly developed areas.

3.2 Agriculture and Forestry Resources

	Prior EIR Determination	Significant Impact Peculiar to the Project or the Project Site	Significant Impact due to New Information	Impact Adequately Addressed in General Plan EIR
II. AGRICULTURE AND FORESTRY RESOURCES – In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Dept. Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state's inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment project; and forest carbon measurement methodology provided in Forest Protocols adopted by the California Air Resources Board. Would the project:				
a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?	Significant and Unavoidable	☐	☐	☒
b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?	Significant and Unavoidable	☐	☐	☒
c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code Section 12220(g)), timberland (as defined by Public Resources Code Section 4526), or timberland zoned Timberland Production (as defined by Government Code Section 51104(g))?	N/A	☐	☐	☒
d) Result in the loss of forest land or conversion of forest land to non-forest use?	N/A	☐	☐	☒
e) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?	Less than Significant with Mitigation	☐	☐	☒

a) Would the project convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?

The General Plan EIR found that buildout of the General Plan would have a potentially significant impact on conversion of Important Farmland. The General Plan EIR set forth MM AG-1.1 and MM AG-1.2 to reduce the severity of the impact by protecting Important Farmland within the City and by directing development to the major growth areas, as defined by the Primary Urban Service Boundary, in a manner that avoids loss of Prime Farmland where feasible. However, the General Plan EIR concluded that the residual significance would be remain significant and unavoidable (City of Manteca 2003a).

According to the California Department of Conservation, the project site is designated as Farmland of Local Importance (DOC 2020). This designation applies to land considered important to the local agricultural economy as determined by each county's board of supervisors and a local advisory committee. A review of historic maps indicate farming operations at the project site as recently as 1993 (Historic Aerials 2022). However, the site is currently vacant and no longer supports farming. The project area is surrounded by other urban development and is zoned and designated General Commercial (City of Manteca 2019). The project site was not anticipated by the General Plan to be used for agricultural purposes (City of Manteca 2003b) and Farmland of Local Importance is not considered "Important Farmland" by the Department of Conservation. Therefore, the proposed project would not result in new or more severe impacts than what was previously disclosed in the General Plan EIR. No additional analysis is required.

b) Would the project conflict with existing zoning for agricultural use, or a Williamson Act contract?

The General Plan EIR found that buildout of the General Plan would have a potentially significant impact on cancellation of Williamson Act contracts and potential conflicts with agricultural zoning. The General Plan EIR set forth MM AG-2.1 to reduce the severity of the impact by protecting designated agricultural lands without placing an undue burden on agricultural landowners and by discouraging the cancellation of Williamson Act contracts outside the Primary Urban Service Boundary line. The General Plan EIR concluded that the residual significance would be significant and unavoidable (City of Manteca 2003a).

The proposed project is not zoned for agricultural use and there is no have a Williamson Act contract. Therefore, the proposed project would not result in new or more severe impacts than what was previously disclosed in the General Plan EIR. No additional analysis is required.

c-d) Would the project conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code Section 12220(g)), timberland (as defined by Public Resources Code Section 4526), or timberland zoned Timberland Production (as defined by Government Code Section 51104(g))?

Would the project result in the loss of forest land or conversion of forest land to non-forest use?

The General Plan EIR did not address conflicts with forest zoning or conversion of forest land. However, there are no forest lands on the project site or within the General Plan planning area. Furthermore, the City does not have a Forest Zoning District (City of Manteca 2019). Therefore, there is no possibility of conflicts with land zoned for forest land or timberland. The proposed project would not result in new or more severe impacts than what was previously disclosed in the General Plan EIR. No additional analysis is required.

e) Would the project involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?

The General Plan EIR concluded that buildout of the General Plan would have a potentially significant impact on pressures to convert farmland. Since there are no forest lands within the City the conversion of forest lands was not addressed. The General Plan EIR set forth MM AG-3.1 to reduce the severity of the impact by maintaining agricultural use with the City. The General Plan EIR concluded that with mitigation the residual significance would be less than significant after implementation of mitigation (City of Manteca 2003a).

As previously discussed, the project site is designated as Farmland of Local Importance (DOC 2020), but is currently vacant and no longer supports farming. The project site is surrounded by urban development, is zoned and designated for General Commercial (City of Manteca 2019), and was not anticipated by the General Plan to be used for agricultural purposes (City of Manteca 2003b). Therefore, the proposed project would not result in new or more severe impacts than what was previously disclosed in the General Plan EIR. No additional analysis is required.

General Plan EIR Mitigation Measures Applicable to the Proposed Project

None applicable.

3.3 Air Quality

	Prior EIR Determination	Significant Impact Peculiar to the Project or the Project Site	Significant Impact due to New Information	Impact Adequately Addressed in General Plan EIR
III. AIR QUALITY – Where available, the significance criteria established by the applicable air quality management district or air pollution control district may be relied upon to make the following determinations. Would the project:				
a) Conflict with or obstruct implementation of the applicable air quality plan?	Less than Significant with Mitigation	☐	☐	☒
b) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?	Significant and Unavoidable	☐	☐	☒
c) Expose sensitive receptors to substantial pollutant concentrations?	Less than Significant with Mitigation	☐	☐	☒
d) Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?	Less than Significant with Mitigation	☐	☐	☒

a) Would the project conflict with or obstruct implementation of the applicable air quality plan?

The General Plan EIR found that buildout of the General Plan would have a potentially significant impact regarding conflicts with the applicable air quality plan. Adherence to MM AQ-1.1 would require coordination with the San Joaquin Valley Air Pollution Control District (SJVAPCD) and submittal of development proposals to the SJVAPCD for review and comment prior to making any land use decisions to reduce the severity of the impact. The General Plan EIR concluded that with mitigation the residual significance would be less than significant (City of Manteca 2003a).

This analysis following criteria are proposed for determining project consistency with current air quality plans:

1. Will the project conform to the growth assumptions in the air quality plans?

2. Will the project comply with applicable control measures in the air quality plans?

The use of the criteria listed above is a standard approach for CEQA analysis of projects in the SJVAPCD jurisdiction, as well as within other air districts, for the following reasons:

- Air quality plan emissions inventories and attainment modeling are based on growth assumptions for the area within the air district's jurisdiction.

- Air quality plans rely on a set of air district–initiated control measures and implementation of federal and state measures to reduce emissions within their jurisdictions, with the goal of attaining the air quality standards.

The proposed project is consistent with the land uses envisioned in the General Plan, and no General Plan amendment would be required for the project to be implemented. Based on the General Plan land use designation of the project site, emissions related to development of the project would have been included in growth forecasts for the current air quality plans as Commercial development. As such, it follows that the proposed project would not result in growth and associated emissions unforeseen in any local or regional plans. The air quality plans contain a number of control measures, which are enforceable requirements through the adoption of rules and regulations (SJVAPCD 2022). For example, Rule 4601 and Rule 4641 aim to reduce volatile organic compound emissions associated with architectural coating activities. The project would comply with all applicable SJVAPCD rules and regulations in adherence with MM AQ-1.1. Because the proposed project is in conformance with the growth assumptions in the General Plan and would comply with all applicable SJVAPCD control measures, the project would not conflict with or obstruct implementation of the applicable air quality plan. The proposed project would not result in new or more severe impacts than what was previously disclosed in the General Plan EIR. No additional analysis is required.

b) Would the project result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?

The General Plan EIR found that buildout of the General Plan would have a potentially significant impact on criteria pollutant emissions. The General Plan EIR set forth MM AQ-2.1, which includes goals, policies, and implementation measures to reduce the net contribution of pollutants within the air basin to address the

ozone and particulate matter (PM_{10}) nonattainment status present when the EIR was prepared. This includes requirements for new construction to minimize fugitive dust and construction vehicle emissions. However, the General Plan EIR concluded that the residual significance after mitigation would be significant and unavoidable (City of Manteca 2003a).

As previously discussed, emissions related to development of the proposed project would have been included in growth forecasts for the current air quality plans as Commercial development. The project would also be required to comply with applicable General Plan policies in MM AQ-2.1, which includes General Plan Policy AQ-P-7 that requires that new construction be managed to minimize fugitive dust and construction vehicle emissions, and Policy AQ-I-4 that requires that construction plans include and provide a dust management plan to control fugitive dust (City of Manteca 2003b). For these reasons, the proposed project would not result in new or more severe impacts than those disclosed in the General Plan EIR. No additional analysis is required.

c) Would the project expose sensitive receptors to substantial pollutant concentrations?

The General Plan EIR found that buildout of the General Plan would have a potentially significant impact on exposure of sensitive receptors to substantial pollutant concentrations. To mitigate potential impacts, the General Plan EIR proposed MM AQ-4.1, to ensure air pollution point sources are appropriately separated from residential areas and sensitive receptors and requiring developers of sensitive air pollution point receptors provide documentation that the project design includes appropriate buffering to separate the use from sources of air pollution. The General Plan EIR concluded that the residual significance would be less than significant after implementation of mitigation (City of Manteca 2003a).

Toxic air contaminants (TACs) are generated by a variety of sources including gas stations which can lead to adverse health effects. Due to proximity of the following sensitive receptors within 1.2 miles of the project site: Manteca Adventist School, Sierra High School, Kaiser Permanente Manteca Medical Center, Mercy Adult Care, Fruitful Humble Abode, and AM-PM Daycare and Preschool, and single-family residences, an operational Health Risk Assessment was prepared to estimate health risk impacts on nearby sensitive receptors from exposure to toxic air contaminant emissions from the proposed project (provided as Appendix A). The analysis in the Health Risk Assessment used air dispersion modeling methodology to evaluate potential public health risks associated with the project. Results of the modeling analysis were compared with the most recent significance thresholds established by the SJVAPCD in accordance with the SJVAPCD's Guidance for Air Dispersion Modeling (SJVAPCD 2006) and Update to District's Risk Management Policy to Address OEHHA's Revised Risk Assessment Guidance Document (SJVAPCD 2015a). The results of the Health Risk Assessment showed that people in proximity to the project would not be exposed to toxic air contaminants at levels above significance thresholds established by SJVAPCD (see Appendix A). As such, the proposed project would not result in significant impacts to proximate sensitive receptors and no mitigation measures are required. Therefore, the proposed project would not result in new or more severe impacts than what was previously disclosed in the General Plan EIR. No additional analysis is required.

d) Would the project result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?

The General Plan EIR found that buildout of the General Plan would have a potentially significant impact in terms of objectionable odors. To mitigate potential impacts, the General Plan EIR set forth Mitigation

Measure AQ-5.1, which seeks to minimize public exposure to pollutants that create a public nuisance, such as unpleasant odors, and provide buffers between land uses that typically generate hazardous or obnoxious fumes and residential or other sensitive land uses. The General Plan EIR concluded that the residual significance would be less than significant after implementation of mitigation (City of Manteca 2003a).

The SJVAPCD has determined the common land use types that are known to produce odors and have providing screening the distances from sensitive receptors that would warrant a more detailed analysis, including a review of SJVAPCD odor complaint records (SJVAPCD 2015b). The SJVAPCD does not consider gas stations to be a significant source of odor requiring further analysis. Although gas stations may produce odors from fuel and vehicle exhaust, the proposed project would not result in odors that would adversely affect a substantial amount of people. Therefore, the proposed project would not result in new or more severe impacts than what was previously disclosed in the General Plan EIR and MM AQ-5.1 would not be applicable. No additional analysis is required.

General Plan EIR Mitigation Measures Applicable to the Proposed Project

Mitigation Measure AQ-1.1

The General Plan includes the following goal, policy (P), and implementation measures (I) to comply with SJVAPCD's air quality plans, including air toxic plans (City of Manteca 2003b):

Goal AQ-1 Improve Manteca's air quality by: Minimizing public exposure to toxic or hazardous air pollutants.

AQ-P-1 Cooperate with other agencies to develop a consistent and coordinated approach to reduction of air pollution and management of hazardous air pollutants.

AQ-I-2 In accordance with CEQA, submit development proposals to the SJVAPCD for review and comment prior to decision.

Mitigation Measure AQ-2.1

The General Plan includes the following goal, policy (P), and implementation measures (I) to help meet air quality standards and reduce the net contribution to the current ozone and particulate matter (PM_{10}) nonattainment status (City of Manteca 2003b):

Goal AQ-1 Improve Manteca's air quality by: Achieving and maintaining ambient air quality standards established by the U.S. Environmental Protection Agency, the California Air Resources Board, and the San Joaquin Valley Air Pollution Control District.

Goal AQ-3 Increase opportunities for alternatives to internal combustion automobiles including, but not limited to, public transportation, bicycles, walking and alternative fuel vehicles including hybrid gas-electric, electric and compressed natural gas.

AQ-P-7 New construction will be managed to minimize fugitive dust and construction vehicle emissions.

AQ-I-4 Construction activity plans shall include and/or provide for a dust management plan to prevent fugitive dust from leaving the property boundaries and causing a public nuisance or a violation of an ambient air standard. Project development applicants shall be responsible for ensuring that all adequate dust control measures are implemented in a timely manner during all phases of project development and construction.

3.4 Biological Resources

	Prior EIR Determination	Significant Impact Peculiar to the Project or the Project Site	Significant Impact due to New Information	Impact Adequately Addressed in General Plan EIR
IV. BIOLOGICAL RESOURCES – Would the project:				
a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?	Less than Significant with Mitigation	☐	☐	☒
b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?	Less than Significant with Mitigation	☐	☐	☒
c) Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?	Less than Significant with Mitigation	☐	☐	☒
d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	Less than Significant with Mitigation	☐	☐	☒
e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?	N/A	☐	☐	☒
f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?	Less than Significant with Mitigation	☐	☐	☒

a) Would the project have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?

The General Plan EIR found that buildout of the General Plan would have a potentially significant impact on special-status plants, including Delta button-celery (*Eryngium racemosum*) and Wright's trichocoronis (*Trichocoronis wrightii* var. *wrightii*), and special-status wildlife species, including Swainsons hawk (*Buteo swainsoni*), California tiger salamander (*Ambystoma californiense*), tricolored blackbird (*Agelaius tricolor*), and burrowing owl (*Athene cunicularia*). The General Plan EIR set forth MM B-1.1 to reduce the severity of potential impacts to special-status species by requiring compliance with the requirements of the San Joaquin County Multi-Species Habitat Conservation and Open Space Plan (SJMSCP), including associated conducting site surveys and complying with local, state, and federal permitting, where needed. The General Plan EIR concluded that impacts to special-status species would be reduced to less than significant after implementation of the policies and implementation measures compliance with the (City of Manteca 2003a)SJMSCP.

According to the California Natural Diversity Database, special-status plant and animal species known to occur in the Lathrop quadrangle include California tiger salamander, Swainsons hawk, tricolored blackbird, valley elderberry longhorn beetle (*Desmocerus californicus dimorphus*), riparian brush rabbit (*Sylvilagus bachmani riparius*), and Delta button-celery (CDFW 2022). Due to the disturbed nature of the project site, it is unlikely that the project site provides suitable habitat for these special-status species. Nonetheless, implementation of General Plan EIR MM B-1.1 would reduce impacts to special-status species to less than significant levels by requiring the proposed project to comply with the requirements of the SJMSCP or applicable local, state, and federal laws and regulation provisions through consultations with the applicable permitting agencies and local planning agencies in the event special-status species are present on the site. To satisfy SJMSCP requirements, the project would require a pre-construction survey prior to any ground disturbance. If any species or suitable habitat for species covered by the SJMSCP are found, the project would be required to implement applicable Incidental Take Minimization Measures and pay the appropriate fees or purchase mitigation bank credits. Implementation of MM B-1.1 would ensure that the project would not result in impacts more substantial or severe than those identified in the General Plan EIR. Therefore, the proposed project would not result in new or more severe impacts than what was previously disclosed in the General Plan EIR. No additional analysis is required.

b) Would the project have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?

The General Plan EIR found that buildout of the General Plan would have a potentially significant impact on sensitive natural communities through the loss of seasonal wetland and riparian vegetation communities within the plan area. The General Plan EIR set forth MM B-2.1 to reduce the severity of the impact by protecting sensitive native vegetation and wildlife communities and habitat in the City. The General Plan EIR concluded that the residual significance would be less than significant after implementation of mitigation (City of Manteca 2003a).

The vegetation present on the project site generally consists of non-native grasses and ruderal plants. The project site appears to be regularly disturbed by mowing and disking, and has been subject to disturbance from previous farm uses. The site does not support any riparian habitat or other sensitive natural communities and would not be required to comply with MM B-2.1. Therefore, the proposed project would not result in new or more severe impacts than what was previously disclosed in the General Plan EIR. No additional analysis is required.

c) Would the project have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?

The General Plan EIR found that buildout of the General Plan would have a potentially significant impact on federally protected wetlands. The General Plan EIR set forth MM B-3.1 to reduce the severity of the impact by requiring project proponents to acquire a Section 404 permit and to comply with all requirements for protecting federally protected wetlands. The General Plan EIR concluded that the residual significance would be less than significant after implementation of mitigation (City of Manteca 2003a).

The U.S. Fish and Wildlife Service National Wetlands Inventory map shows a stream crossing the southern boundary of the project site (USFWS 2022); however, this unit was mapped using imagery from 1985 and represents a South San Joaquin Irrigation District drain that previously was an open water drainage system. This drainage system has since been converted to an underground conveyance system. There are no other wetlands mapped on the project site. Therefore, the project site does not contain protected wetlands or other jurisdictional areas, and there is no need for permitting associated with the federal or state Clean Water Acts and compliance with MM B-3.1 is not required. The proposed project would not result in new or more severe impacts than what was previously disclosed in the General Plan EIR. No additional analysis is required.

d) Would the project interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?

The General Plan EIR found that buildout of the General Plan would have a potentially significant impact on fish and wildlife movement. The General Plan EIR set forth MM B-4.1 (identical to MM B-1.1) to reduce the severity of the impact by requiring compliance with the SJMSCP or satisfying other applicable federal and state regulations. The General Plan EIR concluded that the residual significance would be less than significant after implementation of mitigation (City of Manteca 2003a).

Due to the disturbed nature of the project site and its location in a developed area of the City, it is unlikely that the site serves as a migratory wildlife corridor or native wildlife nursery site. Significant human-made barriers, including roads and commercial development, present within the vicinity of the project site further inhibits the movement of wildlife through the project site. The project site does not contain any natural features, such as waterways, that may serve as potential wildlife movement corridors. The project would include new bioretention ponds, but these would not facilitate the movement of wildlife. Therefore, compliance with MM B-4.1 is not required and the proposed project would not result in new or more severe impacts than what was previously disclosed in the General Plan EIR. No additional analysis is required.

e) Would the project conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?

The General Plan EIR did not address conflicts with local policies or ordinances (e.g., a tree ordinance). The project site does not contain any trees, and therefore, the proposed project would not result in any conflicts with a tree preservation policy. As discussed previously, the General Plan EIR includes policies for compliance with the SJMSCP reduce significant impacts to biological resources. The proposed project would comply with the SJMCP in accordance with MM B-1.1. Therefore, the proposed project would not result in new or more severe impacts than what was previously disclosed in the General Plan EIR. No additional analysis is required.

f) Would the project conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?

The General Plan EIR found that buildout of the General Plan would have a potentially significant impact as a result of conflicts with the SJMSCP. The General Plan EIR set forth MM B-1.1 to reduce the severity of the impact. The General Plan EIR concluded that the residual significance would be less than significant after implementation of mitigation (City of Manteca 2003a).

Development of the proposed project would be required to the comply with the requirements of the SJMSCP, per Policy RC-I-34 in MM B-1.1 Therefore, the proposed project would not result in new or more severe impacts than what was previously disclosed in the General Plan EIR. No additional analysis is required.

General Plan EIR Mitigation Measures Applicable to the Proposed Project

Mitigation Measure B-1.1

The Resource Conservation Element of the General Plan provides the following policies and implementation measures to avoid impacts to special-status species (City of Manteca 2003b):

RC-P-32 Protect special status species and other species that are sensitive to human activities.

RC-I-32 Continue to support and comply with the requirements of the San Joaquin County Multi-Species Habitat Conservation and Open Space Plan (SJMSCP) when reviewing proposed public and private land use changes.

RC-I-34 Project proponents who opt not to participate in the SJMSCP shall satisfy applicable U.S. Endangered Species Act (ESA), California Endangered Species Act (CESA), National Environmental Policy Act (NEPA), California Environmental Quality Act (CEQA), and other applicable local, state, and federal laws and regulation provisions through consultations with the Permitting Agencies and local planning agencies.

3.5 Cultural Resources

		Prior EIR Determination	Significant Impact Peculiar to the Project or the Project Site	Significant Impact due to New Information	Impact Adequately Addressed in General Plan EIR
V.	**CULTURAL RESOURCES** – Would the project:				
a)	Cause a substantial adverse change in the significance of a historical resource pursuant to Section 15064.5?	Less than Significant with Mitigation	☐	☐	☒
b)	Cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5?	Less than Significant with Mitigation	☐	☐	☒
c)	Disturb any human remains, including those interred outside of formal cemeteries?	Less than Significant with Mitigation	☐	☐	☒

a–b) Would the project cause a substantial adverse change in the significance of a historical resource pursuant to Section 15064.5?

Would the project cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5?

The General Plan EIR found that buildout of the General Plan would have a potentially significant impacts on historical and archaeological resources. The General Plan EIR proposed MM C-1.1, which contains goals, policies, and implementation measures from the General Plan to reduce the severity of impacts to cultural resources. The General Plan EIR concluded that the residual significance would be less than significant after implementation of mitigation (City of Manteca 2003a).

The project site does not contain any buildings or structures. The proposed project would have no impact associated with the removal of historically significant properties and/or the integrity of such resources because the project site does not contain any historical resources, nor is it located near an identified historical resource; therefore, the potential to discover any historic-era resources is low. Due to the disturbed nature of the site, it is also unlikely that project construction would unearth any subsurface archaeological resources. Still, the proposed project has the potential to damage or destroy unknown subsurface archeological resources. The General Plan EIR concluded that compliance with MM C-1.1 would reduce potential impacts to archaeological resources to a less-than-significant level by providing for early detection and preventing or minimizing harm to any archaeological deposits. Therefore, compliance with MM C-1.1 would ensure the proposed project's impacts would be less than significant and would not result in new or substantially more severe impacts than identified in the General Plan EIR. The criteria for requiring further CEQA review are not met.

c) Would the project disturb any human remains, including those interred outside of formal cemeteries?

The General Plan EIR found that buildout of the General Plan would have a potentially significant impact on human remains. The General Plan EIR set forth MM C-2.1 to reduce the severity of this impact. The General Plan EIR concluded that the residual significance would be less than significant after implementation of mitigation (City of Manteca 2003a).

The proposed project would comply with MM C-2.1, which is consistent with federal and state regulations regarding the discovery of human remains, specifically California Health Safety Code Section 7050.5 and Public Resources Code Section 5097.98. Therefore, the proposed project's impacts would be less than significant and would not result in new or substantially more severe impacts than identified in the General Plan EIR. The criteria for requiring further CEQA review are not met.

General Plan EIR Mitigation Measures Applicable to the Proposed Project

Mitigation Measure C-1.1

The Resource Conservation Element of the City of Manteca General Plan provides the following Goals, policies (P), and implementation (I) measures to protect archaeological and historical resources (City of Manteca 2003b):

Goal RC-11 Preserve and enhance Manteca's archaeological and historic resources for their aesthetic, educational and cultural values.

Goal RC-12 Protect Manteca's Native American heritage.

RC-P-35 The City shall not knowingly approve any public or private project that may adversely affect an archaeological site without consulting the California Archaeological Inventory at Stanislaus State University, conducting a site evaluation as may be indicated, and attempting to mitigate any adverse impacts according to the recommendation of a qualified archaeologist. City implementation of this policy shall be guided by the California Environmental Quality Act (CEQA) and the National Historic Preservation Act (NHPA).

RC-P-36 The City shall refer development proposals that may adversely impact archaeological sites to the California Archaeological Inventory, Stanislaus State University.

RC-I-38 Require a records search for any proposed development project, to determine whether the site contains known archaeological, historic, or cultural resources and/or to determine the potential for discovery of additional cultural resources. This requirement may be waived if determined by the City that the proposed project area is already sufficiently surveyed.

RC-I-39 Require that sponsors of proposed development projects on sites where probable cause for discovery of archaeological resources (as indicated by records search and where resources have been discovered in the vicinity of the project) retain a consulting archaeologist to survey the project site. If unique resources, as defined by California State law, are found, a qualified archaeologist or historian shall be called to evaluate the find and to recommend proper action. Require a monitoring plan for the project to ensure that mitigation measures are implemented.

Mitigation Measure C-2.1

The Resource Conservation Element of the City of Manteca General Plan provides the following implementation (I) measure to reduce disturbance to discovered human remains (City of Manteca 2003b):

RC-I-48 If human remains are discovered, California Health and Safety Code Section 7050.5 states that no further disturbance shall occur until the county Coroner has made the necessary findings as to origin and disposition pursuant to Public Resources Code Section 5097.98. If the Coroner determines that no investigation of the cause of death is required and if the remains are of Native American origin, the Coroner will notify the Native American Heritage Commission, which in turn will inform a most likely descendant. The descendant will then recommend to the landowner appropriate disposition of the remains and any grave goods.

3.6 Energy

	Prior EIR Determination	Significant Impact Peculiar to the Project or the Project Site	Significant Impact due to New Information	Impact Adequately Addressed in General Plan EIR
VI. Energy – Would the project:				
a) Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?	Significant and Unavoidable	☐	☐	☒
b) Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?	N/A	☐	☐	☒

a–b) Would the project result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?

Would the project conflict with or obstruct a state or local plan for renewable energy or energy efficiency?

The General Plan EIR found that buildout of the General Plan would have a potentially significant impact on energy consumption. The General Plan EIR section "Other CEQA Considerations" states that "The General Plan 2023 would require expanded energy sources and infrastructure for expanded urban development." The General Plan EIR set forth MM PFS-7.1, which encourages the City to implement energy conservation measures, including innovative uses of solar energy and heat recovery, and MM RC I-8, which enforces Title 24 Energy Efficiency Standards. However, the General Plan EIR found that the residual level of significance would still be significant and unavoidable. The General Plan EIR did not directly address conflicts with renewable energy plans (City of Manteca 2003a).

In accordance with MM PFS-7.1 and MM PFS-7.2, the proposed project would include energy conservation measures and would be designed and constructed in accordance with the latest adopted edition of the

California Code of Regulations (CCR) included in Title 24 Energy Efficiency Standards. Part 6 of Title 24 of the California Code of Regulations CCR establishes energy efficiency standards for residential and non-residential buildings constructed in California to reduce energy demand and consumption. Part 6 is updated periodically (every 3 years) to incorporate and consider new energy efficiency technologies and methodologies. Title 24 also includes Part 11, California's Green Building Standards (CALGreen). CALGreen institutes mandatory minimum environmental performance standards for all ground-up, new construction of commercial and state-owned buildings. The proposed project would meet all applicable Title 24 and CALGreen standards to reduce energy demand and increase energy efficiency. Conservation measures implemented into project design would include LED lighting, energy efficient equipment, electric vehicle charging, and provide for future solar panels. The project would be required to comply with MM PFS-7.1 and MM PFS-7.2 to ensure compliance with the CCR. For these reasons, the proposed project would not result in new or more severe energy impacts than those disclosed in the General Plan EIR. The criteria for requiring further CEQA review are not met.

General Plan EIR Mitigation Measures Applicable to the Proposed Project

Mitigation Measure PFS-7.1

PF-I-15 The City will support energy conservation measures and innovative uses of solar energy, heat recovery, and cogeneration in all structural and industrial processes (City of Manteca 2003a).

Mitigation Measure PFS-7.2

RC-I-8 The City shall enforce Title 24 energy requirements (Building Code), which define construction standards that promote energy conservation (City of Manteca 2003a).

3.7 Geology and Soils

	Prior EIR Determination	Significant Impact Peculiar to the Project or the Project Site	Significant Impact due to New Information	Impact Adequately Addressed in General Plan EIR
VII. GEOLOGY AND SOILS – Would the project:				
a) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:				
i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.	Less than Significant	☐	☐	☒

	Prior EIR Determination	Significant Impact Peculiar to the Project or the Project Site	Significant Impact due to New Information	Impact Adequately Addressed in General Plan EIR
ii) Strong seismic ground shaking?	Less than Significant with Mitigation	☐	☐	☒
iii) Seismic-related ground failure, including liquefaction?	Less than Significant with Mitigation	☐	☐	☒
iv) Landslides?	Less than Significant with Mitigation	☐	☐	☒
b) Result in substantial soil erosion or the loss of topsoil?	Less than Significant with Mitigation	☐	☐	☒
c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?	Less than Significant with Mitigation	☐	☐	☒
d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?	Less than Significant with Mitigation	☐	☐	☒
e) Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of waste water?	No Impact	☐	☐	☒
f) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	Less than Significant with Mitigation	☐	☐	☒

a) ***Would the project directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:***

i) ***Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.***

The General Plan EIR found that buildout of the General Plan would have no impact regarding fault rupture hazards because the City is not located within an Alquist-Priolo fault rupture hazard zone and there are no known active surface fault ruptures located in the City (City of Manteca 2003a). The proposed project would therefore not be located in an area subject to earthquake fault ruptures. The proposed project would not

result in new or substantially more severe impacts than identified in the General Plan EIR. The criteria for requiring further CEQA review are not met.

ii) Strong seismic ground shaking?

iii) Seismic-related ground failure, including liquefaction?

iv) Landslides?

The General Plan EIR found that buildout of the General Plan would have a potentially significant impact associated with ground shaking, seismic-related ground failure, and landslides. The General Plan EIR set forth MM GSS-2.1 to reduce the severity of impacts by requiring new development to mitigate the potential impacts of seismic-induced settlement, comply with the current Building Code, and comply with California Health and Safety Code Section 19100 et seq. (Earthquake Protection Law). The General Plan EIR concluded that the residual significance would be less than significant after implementation of mitigation (City of Manteca 2003a).

In accordance with MM GSS-2.1, the proposed project would comply with all state seismic and building standards and building code requirements for building material and reinforcement. This would also ensure that project buildings are designed to resist stresses produced by earthquakes, in compliance with the Earthquake Protection Law. The project site would not be susceptible to landslides because the site is relatively flat, with a range of approximately 18 to 26 feet above mean sea level, and is also surrounded by flat land. Therefore, the proposed project would not result in new or substantially more severe impacts than identified in the General Plan EIR. The criteria for requiring further CEQA review are not met.

b) Would the project result in substantial soil erosion or the loss of topsoil?

The General Plan EIR found that buildout of the General Plan would have a potentially significant impact associated with soil erosion. The General Plan EIR set forth MM GSS-3.1 to reduce the severity of the impact by requiring all new development to comply with the most recent building code and requiring proposed development to develop site-specific land management and development practices, including appropriate mitigation measures for avoiding or reducing erosion. The General Plan EIR concluded that the residual significance would be less than significant after implementation of mitigation (City of Manteca 2003a).

According to the Natural Resources Conservation Service Web Soil Survey, project site soils consist of Bisgani loamy coarse sand and Tinnin loamy coarse sand (NRCS 2022). Sandy soils are more susceptible to erosion because they have a loose soil structure. However, the proposed project would comply with building code requirements for erosion control and site-specific development standards for specific soil types, as proposed in MM GSS-3.1, which the General Plan EIR determined would reduce soil erosion impacts to less than significant. Therefore, the proposed project would not result in new or substantially more severe impacts than identified in the General Plan EIR. The criteria for requiring further CEQA review are not met.

c) Would the project be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?

The General Plan EIR found that buildout of the General Plan would have a potentially significant impact associated with unstable soils or geologic units and could be subject to erosion or liquefaction. The City is not susceptible to landslides or subsidence. The General Plan EIR set forth MM GSS-2.1 and MM GSS-3.1 to reduce the severity of the impact by requiring new development to mitigate the potential impacts of seismic-induced settlement, comply with the current building code, comply with the Earthquake Protection Law, and requiring proposed development to develop site-specific land management and development practices, including appropriate mitigation measures for avoiding or reducing erosion. The General Plan EIR concluded that the residual significance would be less than significant after implementation of mitigation (City of Manteca 2003a).

As previously discussed, the proposed project would comply with MM GSS-2.1 and MM GSS-3.1. Therefore, the proposed project would not result in new or substantially more severe impacts than identified in the General Plan EIR. The criteria for requiring further CEQA review are not met.

d) Would the project be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?

The General Plan EIR found that buildout of the General Plan would have a potentially significant impact associated with expansive soils. The General Plan EIR set forth MM GSS-4.1 to reduce the severity of the impact by requiring proposed new developments located in areas of suspected significant geological hazards prepare geological reports and/or geological engineering reports, mitigate the potential impacts of geologic hazards through Building Plan review, and comply with the most current building code. The General Plan EIR concluded that the residual significance would be less than significant after implementation of mitigation (City of Manteca 2003a).

Project site soils consist of Bisgani loamy coarse sand and Tinnin loamy coarse sand, which both have linear extensibility ratings of 1.5% (NRCS 2022). Based on linear extensibility ratings, soils can be classified into shrink/swell classes, which represent the soil's tendency for shrinking and swelling from moisture. If the shrink/swell class is rated moderate to very high, shrinking and swelling of the soil can damage buildings and other structures. Soils with a linear extensibility below 3% are in the low shrink/swell class and therefore represent less risk to buildings and structures (NRCS 2021). Because the project site soils are not considered expansive soils, the proposed project would not create substantial direct or indirect risks to life or property resulting from shrinking and swelling of soils and compliance with MM GSS-4.1 is not required. Therefore, the proposed project would not result in new or substantially more severe impacts than identified in the General Plan EIR. The criteria for requiring further CEQA review are not met.

e) Would the project have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of waste water?

The General Plan EIR found that buildout of the General Plan would have no potential to increase the use of septic or alternative wastewater disposal systems because the General Plan requires new development to be served by the City's sanitary sewer system. The General Plan EIR concluded that the residual significance was no impact (City of Manteca 2003a).

The proposed project would not include septic tanks or alternative wastewater disposal systems and would tie into the City's sanitary sewer system. Therefore, the proposed project would not result in new or substantially more severe impacts than identified in the General Plan EIR. The criteria for requiring further CEQA review are not met.

f) Would the project directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?

The General Plan EIR found that buildout of the General Plan would have a potentially significant impact on paleontological resources. The General Plan EIR set forth MM C-1.1 to reduce the severity of the impact by requiring a records search for any proposed development project. The General Plan EIR concluded that the residual significance would be less than significant after implementation of any mitigation identified as a result of the records search. As previously discussed above under 3.5, Cultural Resources, the proposed project would comply with MM C-1.1. Therefore, the proposed project would not result in new or substantially more severe impacts than identified in the General Plan EIR. The criteria for requiring further CEQA review are not met.

General Plan EIR Mitigation Measures Applicable to the Proposed Project

Mitigation Measure GSS-2.1

The General Plan Safety Element provides the following goals, policies (P), and implementation measures (I) to lessen the possible exposure of people and structures to ground shaking or ground failure, including liquefaction (City of Manteca 2016a):

SG-I-1 All new development shall comply with the current Uniform Building Code (UBC) requirements for Seismic Zone 3, which stipulates building structural material and reinforcement.

SG-I-2 All new development shall comply with California Health and Safety Code Section 19100 et seq. (Earthquake Protection Law), which requires that buildings be designed to resist stresses produced by natural forces caused earthquakes and wind.

Mitigation Measure GSS-3.1

The Conservation and Open Space Resource Conservation Element of the General Plan provides the following implementation measures to mitigate the potential of substantial soil erosion of loss of topsoil (City of Manteca 2003b):

RC-I-16 All new development shall comply with the Uniform Building Code (UBC) requirements for specific site development and construction standards for specific soil types.

RC-I-17 All new development shall comply with the Uniform Building Code (UBC), Chapter 70, regulating grading activities including drainage and erosion control.

RC-I-18 Require site-specific land management and development practices for proposed development projects, including appropriate mitigation measures for avoiding or reducing erosion.

3.8 Greenhouse Gas Emissions

	Prior EIR Determination	Significant Impact Peculiar to the Project or the Project Site	Significant Impact due to New Information	Impact Adequately Addressed in General Plan EIR
VIII. GREENHOUSE GAS EMISSIONS – Would the project:				
a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	N/A	☐	☐	☒
b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?	N/A	☐	☐	☒

a-b) Would the project generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?

Would the project generate conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?

The General Plan EIR did not address the impact of greenhouse gas emissions because the CEQA Guidelines did not require the topic to be addressed until amendments to the guidelines were effective in 2010; however, emission sources have been analyzed in the City's Climate Action Plan (CAP) (City of Manteca 2013). The CAP identifies policies within the City of Manteca General Plan that would decrease the City's emissions of greenhouse gases. The CAP also lists Implementation Strategies that add more details and specific actions to the General Plan policies, and clarify how the reductions would occur. The intent of the CAP is to achieve compliance with the state's greenhouse gas reduction mandates by focusing on feasible actions the City can take to minimize the adverse impacts of growth and development on climate change. The CAP demonstrates that the General Plan policies and CAP strategies would reduce emissions to meet reduction targets. Table 1 lists the City's applicable CAP strategies for lowering greenhouse gas emissions identified and whether the project would be consistent with the strategy.

Table 1: Consistency with City of Manteca Climate Action Plan

Climate Action Plan Strategy*	Project Consistency
CD-1: The City shall encourage projects consistent with the development densities allowed by the General Plan and that are contiguous to existing development meet compact development criteria.	Consistent. The General Plan designates the project site for General Commercial use, which allows for a maximum floor area ratio (FAR) of 0.6 and maximum site coverage of 40%. The proposed project would construct 5,700 square feet of building space on a 76,230-square-foot site, which is a FAR of 0.07. The project would have a site coverage of 20%, which is less than the maximum allowed.
POD-1: During the review of subdivision maps and site plans, the City shall ensure that project designs	Consistent. The proposed project would connect to sidewalks adjacent to the project site.

Climate Action Plan Strategy*	Project Consistency
provide internal and external pedestrian connections where appropriate.	
ENB-1: The City shall require developers to exceed Title 24 Energy Efficiency Standards by at least 10 percent. The City recognizes that it may not be feasible for all buildings and structures to exceed Title 24 by this amount because of the form or function of the building. Projects that cannot meet the reduction level may provide solar panels or other non-building-related energy efficiency measures such as exterior lighting or water savings.	Consistent. The proposed project would comply with Title 24 and California Green Building Standards Code (CALGreen), and would include energy conservation measures including LED lights, electric vehicle charging stations, and provide for future solar panels.
WC-1: The City shall continue to implement water conservation measures to comply with the Model Water Efficient Landscape requirements that implement the Water Conservation in Landscaping Act of 2006 (AB 1881, Laird).	Consistent. The proposed project would include low-water-demand landscaping that would reduce water consumption compared to standard turf lawns. Additionally, the proposed project would include bioretention areas to retain stormwater on site and State of California requirements.
Consistent. The proposed project would include recycling bins consistent with the City of Manteca and State of California requirements.	

* Source: City of Manteca 2013

As shown in Table 1, the proposed project would be consistent with applicable CAP strategies for reducing greenhouse gas emissions. The project would not conflict with the CAP or generate greenhouse gas emissions that would have a significant impact on the environment. Therefore, the proposed project would not result in new or more severe impacts related to greenhouse gas emissions. The criteria for requiring further CEQA review are not met.

General Plan EIR Mitigation Measures Applicable to the Proposed Project

None required.

3.9 Hazards and Hazardous Materials

	Prior EIR Determination	Significant Impact Peculiar to the Project or the Project Site	Significant Impact due to New Information	Impact Adequately Addressed in General Plan EIR
IX. HAZARDS AND HAZARDOUS MATERIALS – Would the project:				
a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	Less than Significant with Mitigation	☐	☐	☒

	Prior EIR Determination	Significant Impact Peculiar to the Project or the Project Site	Significant Impact due to New Information	Impact Adequately Addressed in General Plan EIR
b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	Less than Significant with Mitigation	☐	☐	☒
c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?	Less than Significant with Mitigation	☐	☐	☒
d) Be located on a site that is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	No Impact	☐	☐	☒
e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?	N/A	☐	☐	☒
f) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	Less than Significant with Mitigation	☐	☐	☒
g) Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?	No Impact	☐	☐	☒

a–b) Would the project create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?

Would the project create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?

The General Plan EIR found that buildout of the General Plan would have a potentially significant impact associated with the routine transport, use, or disposal of hazardous materials resulting from light industrial development and some commercial development, which may lead to more transportation of hazardous

materials to and from Interstate 5. The General Plan EIR also found that buildout of the General Plan would have a potentially significant impact through reasonably foreseeable upset and accident conditions due to this additional development. The General Plan EIR set forth MM HM-1.1 and MM HM 2-1 to reduce the severity of impacts by requiring businesses that manufacture, store, use, and/or transport significant quantities of hazardous materials to identify annually such materials and their quantities, and by requiring the submittal of lists of hazardous materials used in existing and proposed industrial and commercial businesses within the City to the Manteca Fire Department. The General Plan EIR concluded that the residual significance would be less than significant after implementation of mitigation (City of Manteca 2003a).

The proposed project would require the regular transport of hazardous materials, including gasoline and diesel fuel. As a result, the proposed project could result in potentially adverse impacts to people and the environment as a result of hazardous materials being accidentally released into the environment (e.g., operators or motorists could spill gasoline while refueling). However, the proposed project would be required to operate in compliance with all with applicable federal, state, and local requirements that regulate gas stations, which would lessen the potential for these impacts. This would include Section 2540.7 of the California Occupational Safety and Health Administration Regulations (Gasoline Dispensing and Service Stations) and Chapter 38 of the California Fire Code (Liquefied Petroleum Gases). Additionally, MM HM-1.1 would require that the storage, use, and transportation of hazardous materials be annually disclosed to the City, and MM HM-2.1 would require the City to cooperate fully with the Union Pacific Railroad, California Highway Patrol, and other public agencies in the event of a hazardous material emergency. With consideration of the above factors, the project would not result in any peculiar effects and would not result in new or more severe impacts than what was disclosed in the General Plan EIR. The criteria for requiring further CEQA review are not met.

c) Would the project emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?

The General Plan EIR found that buildout of the General Plan would have a potentially significant impact in terms of exposing schools to hazardous materials or emissions because there were City plans for additional schools to be built. The General Plan EIR set forth MM HM-3.1 to reduce the severity of the impact by considering the potential of new development for the production, use, storage, and transport of hazardous materials, and by providing for reasonable controls on such hazardous materials. The General Plan EIR concluded that the residual significance would be less than significant after implementation of mitigation (City of Manteca 2003a).

The closest school to the project site is Sierra High School, which is approximately 0.44 miles northeast of the site. The proposed project would not be within 0.25 miles of a school, but would comply with MM HM-3.1 regarding the handling of hazardous materials. Therefore, the project would not result in new or more severe impacts than what was disclosed in the General Plan EIR. The criteria for requiring further CEQA review are not met.

d) Would the project be located on a site that is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?

The General Plan EIR found that buildout of the General Plan would have no impact on Cortese List hazardous materials sites because none are located within the plan area (City of Manteca 2003a). Accordingly, the proposed project would not be located on a Cortese List site, and no impact would occur. The project would not result in new or more severe impacts than what was disclosed in the General Plan EIR. The criteria for requiring further CEQA review are not met.

e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?

The General Plan EIR did not address exposure of persons to aviation hazards due to being within proximity to an airport. There are no airports within the City, and the nearest airport (Stockton Municipal Airport) is located approximately 7 miles north of the project site. Therefore, the likelihood of exposure to aviation hazards is very low (City of Manteca 2003a). The project would not result in new or more severe impacts than what was disclosed in the General Plan EIR. The criteria for requiring further CEQA review are not met.

f) Would the project impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?

The General Plan EIR found that buildout of the General Plan would have a potentially significant impact associated with emergency response and evacuation. The General Plan EIR sets forth MM HM-5.1 to reduce the severity of impacts by requiring periodic emergency response exercises conducted by the City to test the effectiveness of City emergency response procedures, and by City review of county and state emergency response procedures that must be coordinated with City procedures. The General Plan EIR concluded that the residual significance would be less than significant after implementation of mitigation (City of Manteca 2003a).

Access to the project site would be provided by two right-in/right-out access driveways: one on Airport Way and one on Daniels Street. Project plans would be submitted to the City's Fire Department for review and approval to ensure that emergency access is sufficient at the site. The proposed project would comply with California Fire Code requirements for emergency access which would ensure that the project would not result in new or more severe impacts than what was disclosed in the General Plan EIR. No mitigation measures are required and the criteria for requiring further CEQA review are not met.

g) Would the project expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?

The General Plan EIR addressed wildland fires in Section 1.5, Effects Found not to be Significant. The undeveloped portions of the plan area mostly contain agricultural land, which is considered to have low susceptibility to wildland fires because the land is actively managed (City of Manteca 2003a).

The project site consists of flat, vacant land that previously supported agricultural uses. The project is directly adjacent to other vacant parcels, but is in an area being increasingly developed with urban uses. A

large retail shopping center is across Daniels Street to the south, a large sports stadium is 0.2 miles west, and suburban residential uses are 0.1 miles northeast. The project site is within a Local Responsibility Area not designated as a Very High Fire Hazard Safety Zone by the California Department of Forestry and Fire Protection; the closest Very High Fire Hazard Safety Zones are more than 30 miles away near Galt in the Sacramento Valley (CAL FIRE 2007). Therefore, it is unlikely that the proposed project would expose people or structures to a significant risk of loss, injury or death involving wildland fires. The project would not result in new or more severe impacts than what was disclosed in the General Plan EIR. The criteria for requiring further CEQA review are not met.

General Plan EIR Mitigation Measures Applicable to the Proposed Project

Mitigation Measure HM-1.1

The Safety Element of the City of Manteca General Plan provides the following goal, policy (P), and implementation measures (I) to mitigate the exposure of residents to hazardous materials (City of Manteca 2016a):

Goal S-5 Protect the health, safety, natural resources, and property through regulation of use, storage, transport, and disposal of hazardous materials.

S-P-15 The City shall maintain an awareness of hazardous materials throughout the Manteca region.

S-I-9 Require businesses that manufacture, store, use, or transport significant quantities of hazardous materials to identify annually such materials and their quantities.

S-I-10 Require the submittal of lists of hazardous materials used in existing and proposed industrial and commercial businesses within the City of Manteca. The list shall be maintained through the Manteca Fire Department and updated through periodic review.

Mitigation Measure HM-2.1

The Safety Element of the City of Manteca General Plan provides the following policies (P) and implementation measures (I) to reduce the risk of accidental release of hazardous materials (City of Manteca 2016a):

S-P-17 Within its authority, the City shall regulate the production, use, storage, and transport of hazardous materials to protect the health of Manteca residents.

S-I-12 Cooperate fully with Union Pacific Railroad and other public agencies, such as the CHP, in the event of a hazardous material emergency.

Mitigation Measure HM-3.1

The Safety Element of the City of Manteca General Plan provides the following policy (P) to mitigate the possible exposure of schools to hazardous materials (City of Manteca 2016a):

S-P-16 City approvals of all new development shall consider the potential for the production, use, storage, and transport of hazardous materials and provide for reasonable controls on such hazardous materials.

3.10 Hydrology and Water Quality

	Prior EIR Determination	Significant Impact Peculiar to the Project or the Project Site	Significant Impact due to New Information	Impact Adequately Addressed in General Plan EIR
X. HYDROLOGY AND WATER QUALITY – Would the project:				
a) Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?	Less than Significant with Mitigation	☐	☐	☒
b) Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?	Less than Significant	☐	☐	☒
c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:				
i) result in substantial erosion or siltation on- or off-site;	Less than Significant with Mitigation	☐	☐	☒
ii) substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite;	Less than Significant with Mitigation	☐	☐	☒
iii) create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or	Less than Significant with Mitigation	☐	☐	☒
iv) impede or redirect flood flows?	Less than Significant with Mitigation	☐	☐	☒
d) In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?	Less than Significant	☐	☐	☒
e) Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?	N/A	☐	☐	☒

a) Would the project violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?

The General Plan EIR found that buildout of the General Plan would have a potentially significant impact associated with water quality standards. The General Plan EIR sets forth MM HWQ-1.1 to reduce the severity of the impact by ensuring compliance with Regional Water Quality Control Board regulations and standards to maintain and improve groundwater and surface water quality in the City. The General Plan EIR concluded that the residual significance would be less than significant after implementation of mitigation (City of Manteca 2003a).

The proposed project would convert vacant a 1.75-acre undeveloped parcel to a developed state, including the creation of impervious surfaces across approximately 74% of the site. However, the proposed project's storm drainage system would consist of bioretention areas at the southern, eastern, and northwestern areas of the site boundary, as well as inlets and underground piping that would capture runoff and release it into the City's storm drainage system. Furthermore, the proposed project would be required to prepare and implement a Stormwater Pollution Prevention Plan (SWPPP) in accordance with applicable federal and state requirements. The SWPPP would identify best management practices (BMPs) that are intended to prevent erosion during construction activity to avoid contributing sediment into local waterways. These construction and operational features would ensure the proposed project would not violate water quality standards. Per MM HWQ- 1.1, the proposed project would be required to comply with the Regional Water Quality Control Board's regulations and standards. As such, the project would not result in new or more severe impacts than what was disclosed in the General Plan EIR. The criteria for requiring further CEQA review are not met.

b) Would the project substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?

The General Plan EIR found that buildout of the General Plan would have a less-than-significant impact on groundwater. At the time the General Plan EIR was published, the City was expected to receive surface water supplies from the South San Joaquin Irrigation District by 2005. The availability of surface water would allow the City to diversify its water supply sources and reduce reliance on groundwater. The City uses surface water but continues to pump groundwater to meet its projected demand. The General Plan EIR concluded that the significance would be less than significant (City of Manteca 2003a).

The City's 2015 Urban Water Management Plan projects that the City can meet all water demands using a mix of groundwater and surface water through 2035 given planned growth (City of Manteca 2016b). As previously discussed, the proposed project is consistent with the General Plan land use designation and therefore was considered in the City's planning projections. Therefore, development of the proposed project would not be considered to interfere substantially with groundwater recharge. The project would also include bioretention areas and would be required to prepare a SWPPP that would include BMPs for capturing stormwater. Therefore, the project would not result in new or more severe impacts than what was disclosed in the General Plan EIR. The criteria for requiring further CEQA review are not met.

c) Would the project substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:

i) Result in substantial erosion or siltation on- or off-site?

The General Plan EIR found that buildout of the General Plan would have a potentially significant impact associated with wind erosion. The General Plan EIR sets forth MM GSS-3.1 to reduce the severity of the impact by requiring all new development to comply with the most current building code and requiring proposed development to develop site-specific land management and development practices, including appropriate mitigation measures for avoiding or reducing erosion. The General Plan EIR concluded that the residual significance would be less than significant after implementation of mitigation (City of Manteca 2003a).

The proposed project would be subject to National Pollutant Discharge Elimination System requirements, which include the provision that areas of 1 acre or more of disturbance must prepare and implement a SWPPP for the prevention of runoff during construction. The proposed project would be required to implement erosion and sedimentation control measures, such as a SWPPP, during construction and operation. In accordance with MM GSS-3.1, erosion control measures would be implemented to prevent sedimentation in downstream waterways. With consideration of these requirements, the project would not result in new or more severe impacts than what was disclosed in the General Plan EIR. The criteria for requiring further CEQA review are not met.

ii) Substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite?

The General Plan EIR found that buildout of the General Plan would have a potentially significant impact associated with increasing the rate of runoff in a manner that could result in flooding. The General Plan EIR sets forth MM HWQ-3.1 to reduce the severity of the impact by discouraging large, continuous paved areas, and encouraging the use of pervious paving materials, such as brick or stepping stones with sand joints. The General Plan EIR concluded that the residual significance would be less than significant after implementation of mitigation (City of Manteca 2003a).

The proposed project would introduce new impervious surfaces to the site, but would implement bioretention areas to capture increased surface runoff. Outer areas of the project site would be landscaped, which would allow rainwater percolation and prevent runoff waters from flooding off-site areas. The project would be required to prepare a SWPPP that would include BMPs for capturing stormwater. The project would also comply with MM HWQ-3.1 by including bioretention areas for stormwater capture and infiltration. With consideration of these requirements, the project would not result in new or more severe impacts than what was disclosed in the General Plan EIR. The criteria for requiring further CEQA review are not met.

iii) Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?

The General Plan EIR found that buildout of the General Plan would have a potentially significant impact associated with additional sources of polluted runoff. The General Plan EIR sets forth MM HWQ-4.1 to reduce the severity of the impact by using cost-effective urban runoff controls, including BMPs, to limit

urban pollutants from entering water courses. The General Plan EIR concluded that the residual significance would be less than significant after implementation of mitigation (City of Manteca 2003a).

As previously discussed, the proposed project would be required to prepare and implement a SWPPP in accordance with applicable federal and state requirements. In accordance with MM HWQ-4.1, the SWPPP would identify BMPs that are intended to prevent runoff during construction. The project would also contain constructed bioretention areas that would capture runoff from increased impervious surfaces and release it into the City's stormwater system at a rate similar to existing conditions. With consideration of these requirements, the project would not result in new or more severe impacts than what was disclosed in the General Plan EIR. The criteria for requiring further CEQA review are not met.

iv) Impede or redirect flood flows?

The General Plan EIR found that buildout of the General Plan would have a potentially significant impact associated with flooding. The General Plan EIR set forth MM HWQ-3.1 to reduce the severity of the impact by discouraging large, continuous paved areas; encouraging the use of pervious paving materials, such as brick or stepping stones with sand joints; and, where feasible, maintaining natural stream courses and adjacent habitat. The General Plan EIR concluded that the residual significance would be less than significant after implementation of mitigation (City of Manteca 2003a).

The proposed project is designated as FEMA Flood Zone X, which represents areas with reduced flood risk due to levees (FEMA 2009). Although the project would increase the amount of impervious surface area on the site, it would include bioretention basins that would mitigate for the increase in on-site stormwater runoff generated by the proposed project. Stormwater associated with development of the project would be detained in these bioretention basins and would be released into the City's stormwater system. The project would also implement BMPs for capturing and reusing stormwater. Therefore, although the project would increase the amount of impervious surface area on the site, the proposed project would not result in new or substantially more severe impacts than identified in the General Plan EIR. The criteria for requiring further CEQA review are not met.

d) In flood hazard, tsunami, or seiche zones, would the project risk release of pollutants due to project inundation?

The General Plan EIR found that buildout of the General Plan would have a less-than-significant impact associated with inundation. It is highly unlikely that inundation from a seiche or tsunami would affect the plan area because the nearest body of water is the San Joaquin River, which is protected by a levee system. Therefore, the General Plan EIR concluded that this impact would be less than significant (City of Manteca 2003a). Accordingly, the project site is not within an area with high risk of inundation. The proposed project is designated as FEMA Flood Zone X, which represents areas with reduced flood risk due to levees (FEMA 2009). As such, the project would not result in new or more severe impacts than what was disclosed in the General Plan EIR. The criteria for requiring further CEQA review are not met.

e) Would the project conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?

The General Plan EIR did not analyze General Plan consistency with water quality control plan or sustainable groundwater management plan. The Central Valley Regional Water Quality Control Board published a Water

Quality Control Plan in 2018. The City of Manteca adopted an Urban Water Management Plan in 2016 (City of Manteca 2016b). The San Joaquin County and Delta Water Quality Coalition published a Comprehensive Groundwater Management Plan in 2017.

The proposed project would be subject to a Municipal National Pollutant Discharge Elimination System Permit and would ensure that adequate drainage would be provided through connection to the City's existing water and sanitary sewer lines and development of bioretention areas for stormwater runoff. As previously mentioned, the proposed project would be required to prepare and implement a SWPPP in accordance with applicable federal and state requirements. The SWPPP would identify BMPs that are intended to prevent erosion runoff during construction. Furthermore, the General Plan contains several policies intended to protect groundwater supplies. Policy RC-I-3 requires large commercial water users to submit a use and conservation plan as part of the project entitlement review and approval process and to develop a program to monitor compliance with effectiveness of that plan (City of Manteca 2003b). The General Plan designates the project site for General Commercial use (City of Manteca 2019), and the site would be developed consistent with that land use designation. Therefore, the proposed project is considered planned growth and would not conflict with the Water Quality Control Plan, Urban Water Management Plan, or Comprehensive Groundwater Management Plan. Impacts would be less than significant. As such, the project would not result in new or more severe impacts than what was disclosed in the General Plan EIR and the criteria for requiring further CEQA review is not met.

General Plan EIR Mitigation Measures Applicable to the Proposed Project

Mitigation Measure HWQ-1.1

The Resource Conservation Element of the adopted General Plan addresses water quality. The following implementation measure is intended to meet water quality standards and waste discharge requirements for groundwater and surface water (City of Manteca 2003b):

RC-I-24 Comply with the Regional Water Control Board's regulations and standards to maintain and improve groundwater and surface water quality in Manteca.

Mitigation Measure HWQ-3.1

The Safety Element of the General Plan addresses the issue of impervious surfaces and flooding potential. The following implementation measures are intended to reduce the amount of impervious surfaces and the subsequent flooding potential (City of Manteca 2016a):

S-I-6 Discourage large continuous paved areas unless provided with engineered drainage facilities.

S-I-7 Encourage the use of pervious paving materials, such as brick or stepping stones with sand joints.

S-I-8 Where feasible, maintain natural stream courses and adjacent habitat and combine flood control, recreation, water quality, and open space functions.

Mitigation Measure HWQ-4.1

The Resource Conservation Element of the General Plan provides the following policy and implementation measures to help reduce urban contaminants from polluting receiving water bodies (City of Manteca 2003b):

RC-P-11 Minimize pollution of waterways and other surface water bodies from urban runoff.

RC-I-23 Maintain a buffer areas between waterways and urban development to protect water quality and riparian areas.

RC-I-23 Utilize cost-effective urban runoff controls, including Best Management Practices (BMPs), to limit urban pollutants from entering the water courses.

Mitigation Measure GSS-3.1

See the mitigation measure in Section 3.7, Geology and Soils.

3.11 Land Use and Planning

	Prior EIR Determination	Significant Impact Peculiar to the Project or the Project Site	Significant Impact due to New Information	Impact Adequately Addressed in General Plan EIR
XI. LAND USE AND PLANNING – Would the project:				
a) Physically divide an established community?	Less than Significant	☐	☐	☒
b) Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?	Less than Significant	☐	☐	☒

a) Would the project physically divide an established community?

The General Plan EIR found that buildout of the General Plan would have a less-than-significant impact on division of an established community because the General Plan promotes outward growth and preservation of existing neighborhoods. The General Plan EIR concluded that the residual significance would be less than significant (City of Manteca 2003a).

The project site is currently undeveloped and does not contain any buildings or structures. The proposed project would not divide an established community because there are no established communities on site, and access to nearby roads would not be impaired. Therefore, the proposed project would result in no impact and would not result in new or substantially more severe impacts than identified in the General Plan EIR. The criteria for requiring further CEQA review are not met.

b) ***Would the project cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?***

The General Plan EIR found that buildout of the General Plan would have a less-than-significant impact on conflicts with applicable land use plans because the General Plan promotes the logical and orderly expansion of the City. The General Plan EIR concluded that the impact would be less than significant (City of Manteca 2003a).

The proposed project would be consistent with the land use designation for the project site evaluated in the General Plan EIR. The project has been designed consistent with the City's General Plan land use designation, goals and policies, and relevant ordinances, and is therefore considered planned growth that would not conflict with the General Plan. Therefore, the proposed project would result in no impact and would not result in new or substantially more severe impacts than identified in the General Plan EIR. The criteria for requiring further CEQA review are not met.

General Plan EIR Mitigation Measures Applicable to the Proposed Project

None applicable.

3.12 Mineral Resources

	Prior EIR Determination	Significant Impact Peculiar to the Project or the Project Site	Significant Impact due to New Information	Impact Adequately Addressed in General Plan EIR
XII. MINERAL RESOURCES – Would the project:				
a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?	No Impact	☐	☐	☒
b) Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?	No Impact	☐	☐	☒

a–b) ***Would the project result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?***

Would the project result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?

The General Plan EIR addresses impacts to mineral resources in Section 1.5, Focus and Effects Found not to be Significant. There are no mineral resources of local or statewide importance within the plan area. Therefore, there is no possibility of loss of mineral resources of local or statewide importance. The General

Plan EIR concluded that no impact would occur (City of Manteca 2003a). Therefore, the proposed project would not result in the loss of availability of known mineral resources or mineral resource recovery sites. The proposed project would result in no impact and would not result in new or substantially more severe impacts than identified in the General Plan EIR. The criteria for requiring further CEQA review are not met.

General Plan EIR Mitigation Measures Applicable to the Proposed Project

None applicable.

3.13 Noise

	Prior EIR Determination	Significant Impact Peculiar to the Project or the Project Site	Significant Impact due to New Information	Impact Adequately Addressed in General Plan EIR
XIII. NOISE – Would the project result in:				
a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	Less than Significant with Mitigation	☐	☐	☒
b) Generation of excessive groundborne vibration or groundborne noise levels?	N/A	☐	☐	☒
c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?	N/A	☐	☐	☒

Dudek prepared a noise technical memorandum for the proposed project in October 2022, included as Appendix B to this IS. Short-term (e.g., less than one hour in duration) sound pressure level measurements were conducted adjacent to several residential land uses in the project vicinity in order to characterize the existing exterior ambient noise levels at these residences that could be impacted by the project's contribution to on-site noise sources or project-related traffic on area roadways. The results of this report are referenced in the impact analyses below.

a) Would the project result in generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

The General Plan EIR found that buildout of the General Plan would have a potentially significant impact associated with noise levels in excess of adopted standards. To mitigate potential impacts, the General Plan EIR set forth MM N-1.1, which requires new noise-sensitive development in noise-impacted areas to

incorporate effective mitigation measures into the project design, stationary noise sources proposed adjacent to noise-sensitive uses to be mitigated, and development in noise-sensitive land uses to conduct an acoustical analysis as part of the environmental review process. These policies identify the need to mitigate construction noise on a site-specific and project-specific basis to reduce impacts related to construction noise. These policies also include mobile- and stationary-source operational noise thresholds that projects must meet. The General Plan EIR concluded that the residual significance would be less than significant after implementation of mitigation (City of Manteca 2003a).

Noise-generating components of the project would include the vehicle blow dryer just inside the exit of the car wash tunnel; one vacuum station; and a roof-mounted heating, ventilation, and air conditioning package unit on each of the two proposed commercial spaces, as well as vehicle traffic. The technical noise memorandum determined that operational noise from the proposed project would be in compliance with local City regulations at the closest adjacent residences, and project-related increases in off-site traffic noise levels would also not be significant (remaining less than a noticeable change in the ambient noise environment). Construction of the project would be restricted to between 7:00 a.m. and 7:00 p.m. daily in compliance with the City's Municipal Code Section 17.58.50.D to avoid construction noise impacts. Therefore, with adherence to the City's Municipal Code, the project would not result in new or substantially more severe impacts than identified in the General Plan EIR. No mitigation measures are required and the criteria for requiring further CEQA review are not met.

b) Would the project result in generation of excessive groundborne vibration or groundborne noise levels?

The General Plan EIR did not address generation of groundborne vibration or groundborne noise levels. Because the General Plan EIR did not evaluate impacts at the project level, the following analysis provides an evaluation of potential project-level impacts with respect to groundborne vibration.

Included as Appendix B to this Initial Study, the noise technical memorandum estimated groundborne vibration levels resulting from construction activities using data and methods published by the California Department of Transportation. Project construction-related vibration levels at the residence closest to the project would, in all cases, represent less than 10% of the significance threshold for human annoyance (0.24 peak particle velocity [PPV] inches per second [in/sec]). The threshold for structural damage to typical residential structures is higher (0.5 PPV in/sec) (Appendix B). As such, project construction would have no potential to cause structural damage to the closest residences, or to result in annoyance for adjacent residences. Therefore, the project would not result in new or substantially more severe impacts and the criteria for requiring further CEQA review are not met.

c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?

The General Plan EIR did not address exposure of persons to aviation noise. There are no airports within the plan area, and the nearest airport (Stockton Municipal Airport) is located approximately 7 miles north of the project site. Therefore, the likelihood of exposure to excessive noise levels from airports is unlikely. The project would not result in new or more severe impacts and the criteria for requiring further CEQA review are not met.

General Plan EIR Mitigation Measures Applicable to the Proposed Project

None applicable.

3.14 Population and Housing

	Prior EIR Determination	Significant Impact Peculiar to the Project or the Project Site	Significant Impact due to New Information	Impact Adequately Addressed in General Plan EIR
XIV. POPULATION AND HOUSING – Would the project:				
a) Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?	Significant and Unavoidable	☐	☐	☒
b) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?	Less than Significant with Mitigation	☐	☐	☒

a) ***Would the project induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?***

The General Plan EIR found that buildout of the General Plan would have a potentially significant impact related to substantial population growth in the City. The General Plan EIR determined that no feasible mitigation was available to reduce the severity of the impact. Thus, the General Plan EIR concluded that the residual significance would be significant and unavoidable (City of Manteca 2003a).

The project would include a new convenience store, restaurant, gas station, and car wash that would be staffed by new employees. However, these new employees are anticipated to be local residents. The project does not propose any homes or extension of roads or infrastructure. Additionally, the proposed project is consistent with the General Commercial land use designation in the General Plan, and can be considered planned growth assumed under the General Plan. Therefore, the project would not result in new or substantially more severe impacts than identified in the General Plan EIR. The criteria for requiring further CEQA review are not met.

b) ***Would the project displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?***

The General Plan EIR did not analyze displacement of existing people or housing. The project site is undeveloped and does not include any housing or residents. Therefore, no impact would occur, and the

project would not result in new or substantially more severe impacts than identified in the General Plan EIR. The criteria for requiring further CEQA review are not met.

General Plan EIR Mitigation Measures Applicable to the Proposed Project

None applicable.

3.15 Public Services

	Prior EIR Determination	Significant Impact Peculiar to the Project or the Project Site	Significant Impact due to New Information	Impact Adequately Addressed in General Plan EIR
XV. PUBLIC SERVICES – Would the project:				
a) Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for any of the public services:				
Fire protection?	Less than Significant with Mitigation	☐	☐	☒
Police protection?	Less than Significant with Mitigation	☐	☐	☒
Schools?	Less than Significant with Mitigation	☐	☐	☒
Parks?	Less than Significant with Mitigation	☐	☐	☒
Other public facilities?	Less than Significant with Mitigation	☐	☐	☒

a) ***Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for any of the public services:***

Fire Protection?

The General Plan EIR found that buildout of the General Plan would have a potentially significant impact associated with fire protection because growth resulting from the General Plan would result in the need for expanded fire protection services. The General Plan EIR set forth MM PFS-6.1 to reduce the severity of the impact by ensuring adequate staffing and station locations to maintain the minimum feasible response time to fire and emergency calls, establishing criteria for determining the circumstances under which fire

service would be enhanced, and monitoring response times and reporting annually on the results of the monitoring. The General Plan EIR concluded that the residual significance would be less than significant after implementation of mitigation (City of Manteca 2003a).

The proposed project would be served by the City's Fire Department. The closest fire station to the site is Fire Station #2 located at 1154 Union Road (City of Manteca 2022), approximately 1 mile east of the project site. The proposed project would comply with all General Plan policies related to reducing fire risks. Project plans would also be reviewed by the Fire Department to ensure that the site is acceptable for fire safety purposes. The proposed project is consistent with the General Commercial land use designation for the site, and therefore the extent that the project would increase demand for fire protection services was previously considered by the General Plan EIR. The project would not result in new or substantially more severe impacts than identified in the General Plan EIR, no mitigation measures are required, and the criteria for requiring further CEQA review are not met.

Police Protection?

The General Plan EIR found that buildout of the General Plan would have a potentially significant impact associated with police protection. The General Plan EIR set forth MM PFS-6.1 to reduce the severity of the impact by maintaining the minimum feasible response time to police calls, and providing police services to serve the existing and projected population. The General Plan EIR concluded that the residual significance would be less than significant after implementation of mitigation (City of Manteca 2003a).

The project site would be served by the City's Police Department. As previously discussed, the proposed project is consistent with the General Commercial land use designation for the site, and therefore the extent that the project would increase demand for police protection services was previously considered by the General Plan EIR. The project would not result in new or substantially more severe impacts than identified in the General Plan EIR, no mitigation measures are required, and the criteria for requiring further CEQA review are not met.

Schools?

The General Plan EIR found that buildout of the General Plan would have a potentially significant impact associated with schools. The General Plan EIR set forth MM PFS-6.1 to reduce the severity of the impact by ensuring City support to the Manteca Unified School District, such as locating and reserving appropriate sites for new schools, collecting school facility development fees from new development, financing new school facilities, identifying opportunities for reducing the cost of land for school facilities, and more. The General Plan EIR concluded that the residual significance would be less than significant after implementation of mitigation (City of Manteca 2003a).

All new residential and commercial development in the City is required to pay a developer impact fee to fund school improvement projects. The proposed project does not include a residential component that would generate school-age children, but is still required to pay required developer fees to mitigate impacts to schools facilities, in accordance with Policy PF-P-33 of the General Plan (City of Manteca 2003b). Payment of development fees is considered to fully mitigate the impacts of new development on school facilities under Section 65996 of the California Government Code. Therefore, the proposed project would not result in new or substantially more severe impacts than identified in the General Plan EIR. No mitigation measures are required and the criteria for requiring further CEQA review are not met.

Parks or Other Public Facilities?

The General Plan EIR found that buildout of the General Plan would have a potentially significant impact associated with parks and other public facilities. The General Plan EIR set forth MM PFS-6.1 to reduce the severity of the impact with policies that promote maintenance of parks and recreational facilities, provision of pedestrian and bicycle routes, and pursuance of state and county funding to supplement City revenues. The General Plan EIR concluded that the residual significance would be less than significant after implementation of mitigation (City of Manteca 2003a).

The project is within the scope of projected growth under the General Plan and the anticipated uses on the site are assumed in the General Plan EIR. The proposed project does not propose any residential uses that would substantially increase demand for parks or public facilities. Therefore, the project would not result in new or substantially more severe impacts than identified in the General Plan EIR. No mitigation measures are required and the criteria for requiring further CEQA review are not met.

General Plan EIR Mitigation Measures Applicable to the Proposed Project

None applicable.

3.16 Recreation

	Prior EIR Determination	Significant Impact Peculiar to the Project or the Project Site	Significant Impact due to New Information	Impact Adequately Addressed in General Plan EIR
XVI. RECREATION				
a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	Less than Significant with Mitigation	☐	☐	☒
b) Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?	Less than Significant with Mitigation	☐	☐	☒

a–b) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?

Does the project include recreational facilities or require the construction or expansion of recreational facilities, which might have an adverse physical effect on the environment?

As discussed in Section 3.15, Public Services item (a), the General Plan EIR found that buildout of the General Plan would have a potentially significant impact associated with parks and proposed MM PFS-6.1 to reduce the severity of the impact with policies that promote maintenance of parks and recreational facilities. The General Plan EIR concluded that the residual significance would be less than significant after implementation of mitigation (City of Manteca 2003a).

The project is within the scope of projected growth under the General Plan and the anticipated uses on the site areas assumed in the General Plan EIR. The proposed project would not include construction of parks or recreational facilities, and does not propose any residential uses that would substantially increase demand for existing parks or facilities. Therefore, compliance with MM PFS-6.1 is not required and the project would not result in new or substantially more severe impacts than identified in the General Plan EIR. The criteria for requiring further CEQA review are not met.

General Plan EIR Mitigation Measures Applicable to the Proposed Project

None applicable.

3.17 Transportation

	Prior EIR Determination	Significant Impact Peculiar to the Project or the Project Site	Significant Impact due to New Information	Impact Adequately Addressed in General Plan EIR
XVII. TRANSPORTATION – Would the project:				
a) Conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities?	Less than Significant with Mitigation	☐	☐	☒
b) Conflict or be inconsistent with CEQA Guidelines Section 15064.3, subdivision (b)?	N/A	☐	☐	☒
c) Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	N/A	☐	☐	☒
d) Result in inadequate emergency access?	Less than Significant with Mitigation	☐	☐	☒

A Transportation Impact Study (TIS) was prepared by Fehr and Peers in October 2022 for the proposed project and is included as Appendix C to this IS. This study addresses the potential transportation impacts associated with the proposed project. Project impacts to intersection operations and bicycle, pedestrian, and transit facilities are analyzed under both existing and future conditions. A screening analysis was also performed to determine if the project qualified to be relieved of performing a vehicle miles traveled (VMT) impact analysis. Information from this TIS is incorporated into the impact analyses below, as appropriate.

The General Plan EIR's transportation analysis relied upon level of service (LOS) as the primary metric for evaluating transportation impacts. However, LOS is no longer considered as a basis for evaluating transportation impacts under CEQA. SB 743, passed in 2013, required the California Governor's Office of Planning and Research (OPR) to develop new CEQA guidelines to address traffic impacts under CEQA. In December 2018, the Resources Agency adopted CEQA Guidelines Section 15064.3. Under this guideline, VMT is the primary metric used to identify transportation impacts in CEQA documents. On July 1, 2020, the provisions of Section 15064.3 became effective statewide. However, since the General Plan EIR evaluated LOS this analysis is included.

a) Would the project conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?

The General Plan EIR found that buildout of the General Plan would be consistent with San Joaquin Council of Governments (SJCOG) Regional Transportation Plan policies, including meeting the travel needs of citizens and businesses, minimizing environmental impacts, designing a safe and efficient transportation system, and effectively implementing the construction of the transportation system. It was also determined that development of the General Plan would not significantly impede operations of alternate travel modes including transit, bicycles, and pedestrians. However, the General Plan EIR found that planned development would not meet City and SJCOG LOS standards for local and regional roadways and intersections. As discussed previously, LOS is no longer used as a basis for evaluating transportation impacts under CEQA. Nonetheless, the General Plan still includes LOS policies and the TIS prepared for the project evaluates the proposed project against these policies. This includes Policy C-P-1 which requires the impact of new development and land use proposals on LOS be considered in the environmental review process, and Policy C-P-2 which states that the City should strive for a vehicular LOS of D or better at all streets and intersections except in the Downtown area (City of Manteca 2003a).

The results of the TIS intersection operations analysis indicate that the addition of project trips to the Airport Way/Daniels Street intersection would cause further queue spillback in the dual northbound left-turn lanes, which would exacerbate queuing on the SR 120 westbound off-ramp at Airport Way. This would exacerbate delays at intersections that are LOS E and F under cumulative conditions. The TIS recommends modification of signal timings and lengthening of the southbound left-turn lane at the Airport Way/Daniels Street intersection in order to reduce queuing impacts. The proposed project would not include these modifications but would pay appropriate City and SJCOG transportation impact fees in accordance with Sections 13.38.070 and 13.46.050 of the City's Municipal Code. These fees are intended to provide funding for transportation and transit improvements.

The project is within the scope of projected growth under the General Plan and the anticipated uses on the site as assumed in the General Plan EIR. While the proposed project would exacerbate LOS impacts, the project is considered planned growth under the General Plan and was considered in the analysis of the General Plan EIR, which acknowledged LOS impacts from buildout of the City. Therefore, the proposed

project would not result in new or substantially more severe LOS impacts than identified in the General Plan EIR. The project would also follow the recommended site improvements described in the TIS such as adding "Yield" and "No U-Turn" signs at appropriate areas of the site. The TIS did not find any conflicts with other applicable transportation plans and the project would meet City development standards, including the Manteca Municipal Code Parking and Driveway Design and Development Standards (Section 17.52.090) related to curb cuts, drive aisle widths, and stall sizes and Manteca Municipal Code Section 17.52.110 related to the provision of bicycle parking. Overall, the project would not result in new or substantially more severe impacts than identified in the General Plan EIR. The criteria for requiring further CEQA review are not met.

b) Would the project conflict or be inconsistent with CEQA Guidelines Section 15064.3, subdivision (b)?

The General Plan FEIR did not address VMT because it was prepared before VMT was adopted as primary metric used to identify transportation impacts in CEQA documents. The TIS conducted a VMT screening analysis for the project which found that the project would satisfy the local-serving retail VMT screening criteria by virtue of the nature and size of the project. The project can reasonably be described as a "local serving" business that would improve commercial destination proximity. Therefore, no quantitative VMT analysis or associated mitigation measures are required for transportation purposes, and the project can be presumed to have a less than significant impact on VMT. The project would not result in new or substantially more severe impacts and the criteria for requiring further CEQA review are not met.

c) Would the project substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?

The General Plan FEIR did not address roadway safety hazards. The TIS prepared for the project determined that the project would not create any vehicle, bicycle, or pedestrian hazards and would maintain adequate corner sight distances at the Airport Way/Daniels Street intersection in accordance with the Manteca Municipal Code section 17.54.060. Therefore, the project would not result in new or substantially more severe impacts and the criteria for requiring further CEQA review are not met.

d) Would the project result in inadequate emergency access?

The General Plan EIR found that buildout of the General Plan would have a potentially significant impact associated with emergency response and evacuation. The General Plan EIR set forth Policies S-P-18, S-I 14, and S-I-15 to reduce the severity of the impact by the City maintaining and periodically updating its Emergency Plan, conducting periodic emergency response exercises to test the effectiveness of City emergency response procedures, and establishing a requirement for a transportation demand management program in any business park, industrial or commercial land use that employs more than 50 full-time-equivalent employees. The General Plan EIR concluded that the residual significance would be less than significant after implementation of mitigation (City of Manteca 2003a).

As discussed in Section 3.9(f), the project would provide adequate emergency access. Access to the project site would be provided by two right-in/right-out access driveways: one on Airport Way, and the other on Daniels Street. The proposed project site plan would be submitted to the City's Fire Department for review and approval to ensure that emergency access is sufficient at the site. The proposed project would also comply with California Fire Code requirements for emergency access. No mitigation measures would be required for the project because review of project plans by the Fire Department and compliance with Fire

Code requirements would ensure adequate emergency access. Therefore, the project would not result in new or substantially more severe impacts than identified in the General Plan EIR and the criteria for requiring further CEQA review are not met.

General Plan EIR Mitigation Measures Applicable to the Proposed Project

None applicable.

3.18 Tribal Cultural Resources

	Prior EIR Determination	Significant Impact Peculiar to the Project or the Project Site	Significant Impact due to New Information	Impact Adequately Addressed in General Plan EIR
XVIII. TRIBAL CULTURAL RESOURCES				
Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code Section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:				
a) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code Section 5020.1(k), or	Less than Significant with Mitigation	☐	☐	☒
b) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1? In applying the criteria set forth in subdivision (c) of Public Resources Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.	Less than Significant with Mitigation	☐	☐	☒

Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code Section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:

a-b) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code Section 5020.1(k)?

A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1? In applying the criteria set forth in subdivision (c) of Public Resource Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.

The General Plan FEIR found that a buildout of the General Plan would have a potentially significant impact on cultural resources, including tribal cultural resources. The General Plan FEIR proposed MM C-1.1, which contains goals, policies, and implementation measures from the General Plan to reduce the severity of impacts to these cultural resources. The General Plan FEIR concluded that the residual significance would be less than significant after implementation of mitigation.

Due to the disturbed nature of the site it is unlikely that project construction would unearth any subsurface tribal cultural resources. Still, there is a chance for impacts to currently undiscovered resources. The General Plan EIR concluded that compliance with MM C-1.1 would reduce potential impacts to cultural resources to a less-than-significant level by providing for early detection and preventing or minimizing harm to the resources. The proposed project would comply with MM C-1.1 and therefore the proposed project would not result in new or substantially more severe impacts than identified in the General Plan EIR. The criteria for requiring further CEQA review are not met.

General Plan EIR Mitigation Measures Applicable to the Proposed Project

See Mitigation Measure C-1.1 in Section 3.5, Cultural Resources.

3.19 Utilities and Service Systems

	Prior EIR Determination	Significant Impact Peculiar to the Project or the Project Site	Significant Impact due to New Information	Impact Adequately Addressed in General Plan EIR
XIX. UTILITIES AND SERVICE SYSTEMS – Would the project:				
a) Require or result in the relocation or construction of new or expanded water, waste water treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?	Significant and Unavoidable	☐	☐	☒

	Prior EIR Determination	Significant Impact Peculiar to the Project or the Project Site	Significant Impact due to New Information	Impact Adequately Addressed in General Plan EIR
b) Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry, and multiple dry years?	Less than Significant with Mitigation	☐	☐	☒
c) Result in a determination by the waste water treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?	Less than Significant with Mitigation	☐	☐	☒
d) Generate solid waste in excess of state or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?	Less than Significant with Mitigation	☐	☐	☒
e) Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?	Less than Significant with Mitigation	☐	☐	☒

a) Would the project require or result in the relocation or construction of new or expanded water, waste water treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?

The General Plan EIR found that buildout of the General Plan would have a potentially significant impact related to expanded water facilities, stormwater facilities, wastewater treatment facilities, and electrical and natural gas facilities. The General Plan EIR set forth MM PFS-1.1, MM PFS-1.2, MM PFS-2.1, MM PFS-3.1, MM PFS-3.2, MM PFS-7.1, and MM PFS-7.2 to reduce the severity of the impact by requiring, as a condition of project approval, dedication of land and easements, or payment of appropriate fees and exactions to help offset municipal costs of expansion of water treatment facilities and delivery systems; promoting reduced wastewater system demand through efficient water use; requiring the dedication and improvement of drainage detention basins as a condition of development approval according to the standards of the Drainage Master Plan; ensuring adequate, reliable electric service is available to all users in the City; promoting energy conservation and the use of solar energy techniques; and supporting the use of alternative energy sources in new commercial, industrial, and residential development.

The General Plan EIR concluded that for the expansion of water, stormwater, and wastewater facilities, the residual significance would be less than significant after implementation of mitigation. However, for the expansion of electrical and natural gas facilities, there would be a significant and unavoidable impact (City of Manteca 2003a).

The General Plan designates the project site for General Commercial use and the proposed project is consistent with that land use designation. Therefore, the proposed project is considered planned growth

and to the extent that the project would require new or expanded water, wastewater, stormwater, electrical and natural gas facilities, this was previously considered by the General Plan EIR. The project would also comply with MM PFS-1.1 by paying appropriate development impact fees, and MM PFS-2.1 and MM PFS-3.1 by constructing new bioretention areas. For these reasons, the proposed project would not result in new or more severe impacts disclosed in the General Plan EIR. The criteria for requiring further CEQA review are not met.

b) Would the project have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?

The General Plan EIR found that buildout of the General Plan would have a potentially significant impact associated with water supply. However, the General Plan EIR set forth MM PFS-1.1 to reduce the severity of the impact by requiring, as a condition of project approval, dedication of land and easements or payment of appropriate fees and exactions to help offset municipal costs of expansion of water treatment facilities and delivery systems. The General Plan EIR concluded that the residual significance would be less than significant after implementation of mitigation (City of Manteca 2003a).

The project site consists of undeveloped land. Therefore, the construction of the proposed project would increase water demand on-site. The General Plan designates the project site for General Commercial use and the proposed project is consistent with that land use designation. Furthermore, the 2015 Urban Water Management Plan, Table 7-2: Normal Year Supply and Demand Comparison, projects that the City can meet all water demands through the year 2035 based on the amount of planned growth (City of Manteca 2016b) The proposed project is considered planned growth and to the extent that the proposed project would require additional water supply, this was previously considered by the General Plan EIR. The project would also comply with MM PFS-1.1 by paying appropriate development impact fees. For these reasons, the proposed project would not result in new or more severe impacts disclosed in the General Plan FEIR. The criteria for requiring further CEQA review are not met.

c) Would the project result in a determination by the waste water treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?

The General Plan EIR found that buildout of the General Plan would have a potentially significant impact associated with wastewater treatment. The General Plan EIR set forth MM PFS-2.1 to reduce the severity of the impact by promoting reduced a reduction in wastewater system flows demand through efficient water use. The General Plan EIR concluded that the residual significance would be less than significant after implementation of mitigation (City of Manteca 2003a).

The General Plan designates the project site for General Commercial use, and the proposed project is consistent with that land use designation. Therefore, the proposed project is considered planned growth. In 2006, the City published the Wastewater Quality Control Facility Master Plan Update, which led to the expansion of the Wastewater Quality Control Facility. At the time the General Plan EIR was adopted (2003), the City had planned for this expansion to accommodate growth for buildout of the General Plan, including General Commercial development on the project site. Furthermore, the proposed project would be subject to MM PFS 2.1. Therefore, to the extent that the proposed project would generate additional effluent that would require treatment, this was previously considered by the General Plan EIR. For these reasons, the

proposed project would not result in new or more severe impacts disclosed in the General Plan EIR. The criteria for requiring further CEQA review are not met.

d–e) Would the project generate solid waste in excess of state or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?

Would the project comply with federal, state, and local management and reduction statutes and regulations related to solid waste?

The General Plan EIR found that buildout of the General Plan would have a potentially significant impact associated with solid waste. The General Plan EIR set forth MM PFS-4.1 and MM PFS-5.1 to reduce the severity of the impact by providing for the implementation and enforcement of the provisions for the Source Reduction and Recycling Element, as mandated by the state. The General Plan EIR concluded that the residual significance would be less than significant after implementation of mitigation (City of Manteca 2003a).

As previously discussed, the proposed project is considered planned growth under the General Plan. The proposed project would be required to comply with all federal, state, and local regulations regarding solid waste. To the extent that the proposed project would generate both construction and operational solid waste, this was previously considered by the General Plan EIR. The project would also comply with MM PFS-4.1 and MM PFS-5.1 related to solid waste. For these reasons, the proposed project would not result in new or more severe impacts disclosed in the General Plan FEIR. The criteria for requiring further CEQA review are not met.

General Plan EIR Mitigation Measures Applicable to the Proposed Project

Mitigation Measure PFS-1.1

The Public Facilities and Services Element of the General Plan addresses water supply through the following implementation measure (City of Manteca 2003b):

PF-I-3 The City shall require, as a condition of project approval, dedication of land and easements, or payment of appropriate fees and exactions, to help offset municipal costs of expansion of water treatment facilities and delivery systems.

Mitigation Measure PFS-2.1

The Public Facilities and Services Element of the General Plan addresses wastewater (sewer) treatment through the following implementation measure (City of Manteca 2003b):

PF-I-12 The City will promote reduced wastewater system demand through efficient water use by:

- requiring water conserving design and equipment in new construction;
- encouraging retrofitting with water conserving devices;
- designing wastewater systems to minimize inflow and infiltration to the extent economically feasible; and

- maintaining a Citywide map of all sewer collection system components and monitoring the condition of the system on a regular basis.

Mitigation Measure PFS-3.1

The Public Facilities and Services Element of the General Plan addresses stormwater drainage through the following policies (City of Manteca 2003b):

PF-P-25 The City shall require the dedication and improvement of drainage detention basins as a condition of development approval according to the standards of the Drainage Master Plan. The responsibility for the dedication and improvement of detention basins shall be based on the prorated share of stormwater runoff resulting from each development.

PF-P-26 Storm drainage systems within new development areas shall include open drainage corridors where feasible to supplement or replace an underground piped drainage system. The drainage systems would provide for short-term stormwater detention, stormwater conveyance for stormwaters exceeding a 10-year event, stormwater quality treatment, bike and pedestrian paths, and visual open space within neighborhoods.

Mitigation Measure PFS-4.1

The Public Facilities and Services Element of the General Plan addresses solid waste handling and disposal through the following goals (City of Manteca 2003b):

Goal PF-11 Provide for the implementation and enforcement of the provisions for the Source Reduction and Recycling Element, as mandated by the State.

Goal PF-12 Maintain efficient, effective and economical solid waste services for the residents, businesses and visitors to Manteca.

Mitigation Measure PFS-5.1

The Public Facilities and Services Element of the General Plan addresses solid waste handling and disposal through the following goal and policy (City of Manteca 2003b):

Goal PF-11 Provide for the implementation and enforcement of the provisions for the Source Reduction and Recycling Element, as mandated by the State.

PF-P-29 The City will implement and enforce the provisions of its Source Reduction and Recycling Element.

3.20 Wildfire

	Prior EIR Determination	Significant Impact Peculiar to the Project or the Project Site	Significant Impact due to New Information	Impact Adequately Addressed in General Plan EIR
XX. WILDFIRE – If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project:				
a) Substantially impair an adopted emergency response plan or emergency evacuation plan?	N/A	☐	☐	☒
b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?	N/A	☐	☐	☒
c) Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?	N/A	☐	☐	☒
d) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?	N/A	☐	☐	☒

a–d) Would the project substantially impair an adopted emergency response plan or emergency evacuation plan?

Due to slope, prevailing winds, and other factors, would the project exacerbate wildfire risks, and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?

Would the project require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines, or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?

Would the project expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?

The General Plan EIR addressed wildland fires in Section 1.5, EIR Focus and Effects Found Not to Be Significant The undeveloped portions of the plan area mostly contain agricultural land, which is considered to have low susceptibility to wildland fires because the land is actively managed and does not contain

sources of fuel for wildfires. Therefore, the General Plan EIR concluded that the likelihood of the plan area being exposed to wildland fires is low, and no impact would occur (City of Manteca 2003a).

The project sites contains flat, undeveloped land that previously supported farming operations. The project is located directly adjacent to other vacant parcels but is in an area being increasingly developed with urban uses. A large retail shopping center is located across Daniels Street to the south, a large sports stadium is 0.2 miles west, and suburban residential uses are 0.1 miles northeast. The project is within a Local Responsibility Area and is not designated as a Very High Fire Hazard Safety Zone by the California Department of Forestry and Fire Protection. The closest zones are located more than 30 miles away from the site near Galt in the Sacramento valley. Therefore, it is unlikely that the proposed project would expose people or structures to a significant risk of loss, injury or death involving wildland fires. The project would also be constructed consistent with California Fire Code requirements for emergency access as directed by the City's Fire Department preliminary review. For these reasons, the proposed project would not result in new or more severe impacts disclosed in the General Plan FEIR.

General Plan EIR Mitigation Measures Applicable to the Proposed Project

None applicable.

3.21 Mandatory Findings of Significance

	Prior EIR Determination	Significant Impact Peculiar to the Project or the Project Site	Significant Impact due to New Information	Impact Adequately Addressed in General Plan EIR
XXI. MANDATORY FINDINGS OF SIGNIFICANCE				
a) Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal, or eliminate important examples of the major periods of California history or prehistory?	Less than Significant with Mitigation	☐	☐	☒
b) Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects.)	Less than Significant with Mitigation	☐	☐	☒

	Prior EIR Determination	Significant Impact Peculiar to the Project or the Project Site	Significant Impact due to New Information	Impact Adequately Addressed in General Plan EIR
c) Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?	Less than Significant with Mitigation	☐	☐	☒

a) ***Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal, or eliminate important examples of the major periods of California history or prehistory?***

The General Plan EIR found that General Plan buildout would have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a wildlife species, or eliminate important examples of the major periods of California history or prehistory (City of Manteca 2003a). As discussed in this IS, the proposed project would not result in new or substantially more severe impacts than identified in the General Plan EIR and would comply with applicable General Plan FEIR mitigation measures. The criteria for requiring further CEQA review are not met.

b) ***Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects.)***

The proposed project would incrementally contribute to cumulative impacts in combination with other projects occurring within the City. However, all reasonably foreseeable future development in the City would be subject to environmental review and regulations similar to the proposed project. Furthermore, all private and public development projects are guided by the policies identified in the City's General Plan and by the regulations established in the City's Municipal Code. As provided in the previous analysis for each resource area, this document demonstrates that the project's contribution to any existing cumulative impacts would be reduced to less-than-significant levels through compliance with General Plan policies and mitigation measures included in the General Plan EIR and any contribution to an existing cumulative impact would not be considered cumulatively considerable. Therefore, the project would not have cumulatively considerable contributions to existing cumulative impacts resulting in a less-than-significant impact. Cumulative impacts were adequately addressed in the General Plan EIR and no further CEQA review is required.

c) ***Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?***

As provided in the previous analysis for each resource area, this document demonstrates that the project would not cause any substantial adverse effects on human beings that are not addressed by existing

General Plan policies and compliance with existing regulations, such as statewide airborne toxic control measures, and the City's Municipal Code that sets forth acceptable days and hours of construction activities to reduce noise impacts. The project would not produce any other environmental effect that would cause substantial adverse effects on human beings, and impacts would be less than significant. These impacts were adequately addressed in the City's General Plan EIR and no further CEQA review is required.

MEMORANDUM

To:	Paul Kamboj, Two Guys Food and Fuel
From:	Adam Poll, Dudek
Subject:	Refined Health Risk Assessment for the Daniels Center Project
Date:	February 6, 2023
Attachments:	A – Emission Calculations
	B – AERMOD and HARP Modeling Files

1 Introduction

1.1 Purpose

Dudek prepared a health risk assessment (HRA) modeling analysis to estimate health risk impacts on proximate sensitive receptors from exposure to toxic air contaminant (TAC) emissions from operation of the proposed Daniels Center project (proposed project) located at 2125 Daniels Street, Manteca, CA 95337. The project is currently in the design review phase with the City of Manteca (City).

The analysis in this HRA uses air dispersion modeling methodology to evaluate potential public health risks associated with the project. Results of the modeling analysis are compared with the most recent significance thresholds established by the San Joaquin Valley Air Pollution Control District (SJVAPCD) in accordance with the SJVAPCD's *Guidelines for Air Dispersion Modeling* (SJVAPCD 2006) and *Update to District's Risk Management Policy to Address OEHHA's Revised Risk Assessment Guidance Document* (SJVAPCD 2015).

1.2 Facility Information

Stationary Source Name: Daniels Center Project

Stationary Source Identification Number (SSID): NA

Location: Northwest corner of Daniels Street and Airport Way, Manteca

All facility names and facility identification numbers (FIDs) associated with the stationary source: NA

Location (street address and UTM coordinates, including datum): 2125 Daniels Street, Manteca, CA 95337; (653858.90 m E, 4183594.30 m N); WGS84.

The boundary locations for the facility are provided in Attachment A. The property boundary coordinates were used to set up the receptor grid for dispersion modeling.

Description of stationary source operations: The proposed project consists of a convenience store, fueling pumps, car wash, and quick-serve restaurant. The fueling station includes 10 dispensers with 20 fueling positions, dispensing regular and supreme grades of gasoline and diesel.

Plot plan of stationary source: See Figure 1 for the plot plan and the aerial map Figure 2 for the project site.

Daniels Center Health Risk Assessment

2 Source and Emission Inventory Information

The California Air Resources Board (CARB) *Gasoline Service Station Industrywide Risk Assessment Technical Guidance* was relied upon to estimate emissions from the project (CARB 2022a). The guidance document provides emission factors for estimating total organic gases (TOG) from the project along with toxic air contaminant (TAC) speciation. TOG emissions were estimated for loading, breathing, refueling, spillage, and hose permeation. It was assumed that the proposed project would have an EVR hose type. The fueling emissions factor was scaled based on the default percentage of vehicles with and without on-board refueling vapor recovery (ORVR) (83% ORVR and 17% non-ORVR). The annual and maximum hourly emissions were estimated using the toxic weight percentages in Tables 11 and 12 of CARB's guidelines (CARB 2022a). As the proposed project would have an annual throughput of approximately 2.1 million gallons per year, the Phase II hourly throughput of 700 gallons per hour was assumed. Table 1 shows the estimated annual and maximum hourly emissions for the project by source. Detailed emission calculations are provided in Attachment A. It should be noted that only toxic air contaminants with an acute reference exposure level were estimated for maximum hourly emissions.

Table 1. Emissions Inventory

Source	TOG	Benzene	Ethyl Benzene	n-Hexane	Naphthalene	Propylene	Toluene	Xylenes
	Annual Emissions (lb/year)							
Loading	3.22E+02	1.47E+00	3.45E-01	5.86E+00	5.86E+00	1.16E-02	3.58E+00	1.32E+00

3 Modeling Methodology

The dispersion modeling was performed using American Meteorological Society/U.S. Environmental Protection Agency Regulatory Model (AERMOD) View Version 11.0.1, which is the model SJVAPCD recommends for atmospheric dispersion of emissions. AERMOD is a steady-state Gaussian plume model that incorporates air dispersion based on planetary boundary layer turbulence structure and scaling concepts, including treatment of surface and elevated sources, building downwash, and simple and complex terrain (EPA 2017). The health database version 22118 was used in HARP2 (CARB 2022b). The AERMOD modeling parameters were based on the CARB Guidance (CARB 2022). Table 2 provides the principle modeling parameters used in the assessment. All available electronic input and output files associated with the AERMOD and HARP2 modeling was included in Attachment B.

Table 2. American Meteorological Society/Environmental Protection Agency Regulatory Model Principle Parameters

Parameter	Details
Meteorological Data	AERMOD-specific meteorological data for the Stockton Airport air monitoring station (23237) was used for the dispersion modeling. A 5-year meteorological data set from 2013 through 2017 was obtained from the SJVAPCD in a preprocessed format suitable for use in AERMOD (SJVAPCD 2021).
Urban versus Rural Option	Rural dispersion option was selected due to the undeveloped nature of the Project area and per SJVAPCD guidelines.
Terrain Characteristics	The elevation of the site is 26 feet above sea level and the surrounding area is predominantly flat.
Elevation Data	Digital elevation data were imported into AERMOD and elevations were assigned to receptors and emission sources, as necessary. Digital elevation data were obtained through the AERMOD View in the United States Geological Survey's National Elevation Dataset format with a resolution of 1/3 degree (approximately 10 meters), consistent with the SJVAPCD guidance (SJVAPCD 2006).
Source Release Characterizations	Loading and breathing emissions from the vent stack were modeled as point sources with a release height of 3.66 meters, stack diameter of 0.0508 meters, exit velocity of 0.001 meters per second, and temperature (291 K for loading and 289 K for breathing) (CARB 2022a). Fueling and hose permeation emissions were modeled as volume sources with height of 4 meters, width and length of 13 meters, and release height of 1.5 meters. Spillage emissions were modeled as volume sources with height of 4 meters, width and length of 13 meters, and release height of 1 meter.
Regulatory Options	Default regulatory options were used in AERMOD.
Building Downwash	Building downwash was incorporated for the proposed buildings onsite using the BPIP-PRIME within AERMOD.

Note: See Attachment B.

Cancer risk is defined as the increase in probability (chance) of an individual developing cancer due to exposure to a carcinogenic compound, typically expressed as the increased chances in one million. Maximum Individual Cancer Risk is the estimated probability of a maximally exposed individual potentially contracting cancer as a result of exposure to TACs over a period of 70 years for residential receptor locations and 40 years for worker locations (SJVAPCD 2015). Cancer risk less than 20 in 1 million means that adverse health effects are not expected. Due to the proximity to agricultural land uses, in addition to the inhalation, soil ingestion, dermal, and mothers milk pathways, the homegrown

produce, beef, dairy cows, pigs, chickens, and eggs pathways were included in HARP2. For the inhalation pathway, the fraction of time at home was not included. The "households that farm" option was selected for the homegrown produce, beef, dairy cows, pigs, chickens, and eggs pathways.

The SJVAPCD has also established noncarcinogenic risk parameters for use in HRAs since some TACs increase noncancerous health risk due to long-term (chronic) exposures and some TACs increase noncancerous health risk due to short-term (acute) exposures. Chronic exposure is evaluated in the construction HRA. Noncarcinogenic risks are quantified by calculating a hazard index, expressed as the ratio between the ambient pollutant concentration and its toxicity or REL, which is a concentration at or below which health effects are not likely to occur. The chronic hazard index is the sum of the individual substance chronic hazard indices for all TACs affecting the same target organ system. The acute hazard index is the sum of the individual substance acute hazard indices for all TACs affecting the same target organ system. A hazard index less of than one (1.0) means that adverse health effects are not expected.

4 Receptors Used for Evaluating Modeled Impacts

Some land uses are considered more sensitive to changes in air quality than others, depending on the population groups and the activities involved. People most likely to be affected by air pollution include children, the elderly, athletes, and people with cardiovascular and chronic respiratory diseases. Facilities and structures where these air pollution-sensitive people live or spend considerable amounts of time are known as sensitive receptors. Land uses where air-pollution-sensitive individuals are most likely to spend time include schools and schoolyards, parks and playgrounds, daycare centers, nursing homes, hospitals, and residential communities (sensitive sites or sensitive land uses) (CARB 2005). SJVAPCD considers schools, daycare centers, hospitals, care facilities (adult/elderly), and residences within 2 kilometers (1.2 miles) of the facility as sensitive receptor land uses (SJVAPCD 2006). The closest sensitive receptor to the project site is a residence 187 feet north of the project site. The site is located within a residential and agricultural area and the predominant receptor type is residential within 2 kilometers. There are also worker receptors within 2 kilometers of the site. A fenceline grid of 25 meter spacing was created out to 100 meters; 50 meter spacing out to 200 meters; 100 meter spacing out to 500 meters; 250 meter spacing out to 1,000 meters; and 500 meter spacing out to 2,000 meters. Additional uniform cartesian grids were placed over residential receptors of 20 meter spacing out to 1,100 meters from the property. The following sensitive receptors were identified within 2 kilometers of the site: Manteca Adventist School, Sierra High School, Kaiser Permanente Manteca Medical Center, Mercy Adult Care, Fruitful Humble Abode, and AM-PM Daycare and Preschool. Figure 3 shows the residential, worker, and sensitive receptors within 2,000 meters of the site.

5 Summary of Results

A summary of the results of the HRA are provided in Tables 2 through 5. AERMOD and HARP 2 outputs are contained in Attachment B.

Table 2. Summary of Cancer Health Risk Results

Receptor Type	Receptor Number	UTME (m)	UTMN (m)	Cancer Risk (in a million)	Significance Threshold (in a million)
Offsite PMI	8099	653875.77	4183633.76	12.3	NA
MEIR	1387	653871.67	4183743.73	0.6	≥20
MEIW	1622	653798.49	4183611.99	0.4	≥20
Sensitive Receptor*	3960	654379.16	4184024.98	0.05	≥20

Source: Attachment B.
Notes: PMI = point of maximum impact; m = meters; MEIR = maximally exposed individual resident; MEIW = maximally exposed individual worker; UTME = Universal Transverse Mercator East; UTMN = Universal Transverse Mercator North.
* The sensitive receptor with the highest result is Sierra High School.

Table 3. Summary of Chronic Non-Cancer Health Risk Results

Receptor Type	Receptor Number	UTME (m)	UTMN (m)	Chronic HI	Health Endpoint(s)	Significance Threshold (HI)
Offsite PMI	8099	653875.77	4183633.76	0.03	Central nervous system; kidney; alimentary; reproductive; respiratory; eye; endocrine; blood	NA
MEIR	1387	653871.67	4183743.73	0.001	Central nervous system; kidney; alimentary; reproductive; respiratory; eye; endocrine; blood	>1
MEIW	1622	653798.49	4183611.99	0.01	Central nervous system; kidney; alimentary; reproductive; respiratory; eye; endocrine; blood	>1
Sensitive Receptor*	3960	654379.16	4184024.98	0.0001	Central nervous system; kidney; alimentary; reproductive; respiratory; eye; endocrine; blood	>1

Source: Attachment B.

Notes: PMI = point of maximum impact; HI = hazard index; m = meters; MEIR = maximally exposed individual resident; MEIW = maximally exposed individual worker; UTME = Universal Transverse Mercator East; UTMN = Universal Transverse Mercator North.
* The sensitive receptor with the highest result is Sierra High School.

Table 4. Summary of 8-Hour Chronic Non-Cancer Health Risk Results

Receptor Type	Receptor Number	UTME (m)	UTMN (m)	Chronic HI	Health Endpoint(s)	Significance Threshold (HI)
Offsite PMI	8099	653875.77	4183633.76	0.03	Eye, blood	NA
MEIR	1387	653871.67	4183743.73	0.001	Eye, blood	>1
MEIW	1622	653798.49	4183611.99	0.01	Eye, blood	>1
Sensitive Receptor*	3960	654379.16	4184024.98	0.0001	Eye, blood	>1

Source: Attachment B.
Notes: PMI = point of maximum impact; HI = hazard index; m = meters; MEIR = maximally exposed individual resident; MEIW = maximally exposed individual worker; UTME = Universal Transverse Mercator East; UTMN = Universal Transverse Mercator North.
* The sensitive receptor with the highest result is Sierra High School.

Table 5. Summary of Acute Non-Cancer Health Risk Results

Receptor Type	Receptor Number	UTME (m)	UTMN (m)	Acute HI	Health Endpoint(s)	Significance Threshold (HI)
Offsite PMI	6253	653854.29	4183555.92	0.2	Immune system, reproductive, respiratory, eye, blood	NA
MEIR	1387	653871.67	4183743.73	0.04	Immune system, reproductive, respiratory, eye, blood	>1
MEIW	6388	653836.36	4183525.65	0.07	Immune system, reproductive, respiratory, eye, blood	>1
Sensitive Receptor*	3962	654359.86	4184068	0.004	Immune system, reproductive, respiratory, eye, blood	>1

Source: Attachment B.
Notes: PMI = point of maximum impact; HI = hazard index; m = meters; MEIR = maximally exposed individual resident; MEIW = maximally exposed individual worker; UTME = Universal Transverse Mercator East; UTMN = Universal Transverse Mercator North.
* The sensitive receptor with the highest result is Sierra High School.

6 Isopleth Maps and Aerial Photos

As shown in Tables 2 through 5 in Section 5, the non-cancer risk (chronic and 8-hour chronic) did not exceed 0.1. The cancer risk exceeded 1 in 1 million and the PMI and the acute non-cancer risk exceeded 0.1 at the PMI. As such, an isopleth for cancer risk over 1 in 1 million is shown in Figure 4 and acute non-cancer risk over 0.1 is provided below as Figure 5.

7 Conclusions

As shown in Section 5, the results of the HRA are less than significant for the operation of the proposed project. The AERMOD and HARP 2 outputs are contained in Attachment B. Based on this analysis, the residential and worker receptors in close proximity to the project would not be exposed to TACs at levels above significance thresholds established by SJVAPCD.

The results determined in this analysis reflect reasonable estimates of source emissions and exhaust characteristics, available meteorological data near the project site, and the use of currently approved air quality models. Given the limits of available tools for such an analysis, the actual impacts may vary from the estimates in this assessment. However, the combined use of the AERMOD dispersion model and the health impact calculations required by OEHHA and SJVAPCD tend to over-predict impacts such that they produce conservative (i.e., health-protective) results. Accordingly, the health impacts are not expected to be higher than those estimated in this assessment.

As such, the proposed project would not result in significant impacts to proximate residential and worker receptors.

Sincerely,

Adam Poll, QEP, LEED AP BD+C
Senior Air Quality Specialist

 - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - -
- - - - - - - - - - - - - - - - - - - -

 **Model Is Setup For Calculation of Average CONCentration Values.

   --  DEPOSITION LOGIC  --
 **NO GAS DEPOSITION Data Provided.
 **NO PARTICLE DEPOSITION Data Provided.
 **Model Uses NO DRY DEPLETION.  DRYDPLT  =  F
 **Model Uses NO WET DEPLETION.  WETDPLT  =  F

 **Model Uses RURAL Dispersion Only.

 **Model Uses Regulatory DEFAULT Options:
        1. Stack-tip Downwash.
        2. Model Accounts for ELEVated Terrain Effects.
        3. Use Calms Processing Routine.
        4. Use Missing Data Processing Routine.
        5. No Exponential Decay.

 **Other Options Specified:
        ADJ_U*   - Use ADJ_U* option for SBL in AERMET
        CCVR_Sub - Meteorological data includes CCVR substitutions
        TEMP_Sub - Meteorological data includes TEMP substitutions

 **Model Assumes No FLAGPOLE Receptor Heights.
```

```
 **The User Specified a Pollutant Type of:  VOC

 **Model Calculates  1 Short Term Average(s) of:   1-HR
     and Calculates PERIOD Averages

 **This Run Includes:     10 Source(s);       5 Source Group(s); and    8105
Receptor(s)

                with:      2 POINT(s), including
                           0 POINTCAP(s) and      0 POINTHOR(s)
                 and:      8 VOLUME source(s)
                 and:      0 AREA type source(s)
                 and:      0 LINE source(s)
                 and:      0 RLINE/RLINEXT source(s)
                 and:      0 OPENPIT source(s)
                 and:      0 BUOYANT LINE source(s) with a total of     0 line(s)

 **Model Set To Continue RUNning After the Setup Testing.

 **The AERMET Input Meteorological Data Version Date:  18081

 **Output Options Selected:
          Model Outputs Tables of PERIOD Averages by Receptor
          Model Outputs Tables of Highest Short Term Values by Receptor (RECTABLE
Keyword)
          Model Outputs External File(s) of High Values for Plotting (PLOTFILE
Keyword)
          Model Outputs Separate Summary File of High Ranked Values (SUMMFILE
Keyword)

 **NOTE:  The Following Flags May Appear Following CONC Values:  c for Calm Hours
                                                                 m for Missing Hours
                                                                 b for Both Calm and
Missing Hours

 **Misc. Inputs:  Base Elev. for Pot. Temp. Profile (m MSL) =     7.90 ;  Decay
Coef. =    0.000     ;  Rot. Angle =     0.0
                  Emission Units = GRAMS/SEC                                ;
Emission Rate Unit Factor =   0.10000E+07
                  Output Units   = MICROGRAMS/M**3

 **Approximate Storage Requirements of Model =      5.9 MB of RAM.

 **Input Runstream File:          aermod.inp

 **Output Print File:             aermod.out

 **Detailed Error/Message File:   Daniels Center AERMOD.err
```
