1 Introduction

1.1 Project Overview

The proposed project by Two Guys Food and Fuel (applicant) would consist of a 3,410-square-foot convenience store, a 2,500-square-foot quick-service restaurant, two full-service restaurants (2,092 square feet and 1,908 square feet), a gas station with 16 fueling positions, a 5,734-square-foot retail building, and a drive-through car wash. The project is located at the southeast corner of South Airport Way and West Lathrop Road in Manteca, California.

1.2 California Environmental Quality Act Compliance

This Initial Study has been prepared per the requirements of the California Environmental Quality Act (CEQA) of 1970 (California Public Resources Code Section 21000, et seq.), and the CEQA Guidelines (14 CCR 15000 et seq.).

1.3 Public Review Process

The Initial Study and the proposed Mitigated Negative Declaration was circulated for public review from September 19, 2023, to October 19, 2023 (SCH No. 2023090415), pursuant to CEQA Guidelines Section 15073(a). One comment letter was received from the Central Valley Regional Water Quality Board on October 19, 2023. A response to this letter is included as Appendix G to this document.

INTENTIONALLY LEFT BLANK

2 Project Description

2.1 Project Location

The project site encompasses approximately 3 acres located in the western portion of the City of Manteca, California (City), in the southeast quadrant of the Airport Way and Lathrop Road intersection. Figure 1 shows the location of the project site. The project parcel is located within the Neighborhood Commercial land use designation.

2.2 Project Characteristics

The proposed project site plan (Airport Plaza, K12 Architects, July 12, 2021) includes the following commercial uses:

- Gas station with 16 fueling positions
- A 1,300-square-foot car wash
- A 3,410-square-foot convenience store
- A 2,500-square-foot drive-through fast-food restaurant
- Two high-turnover full-service restaurants, 2,092 square feet and 1,908 square feet, respectively
- A 5,7340square-foot retail building

Access, Circulation, and Parking

Based on the project site plan, a total of 108 parking spaces would be provided, which aligns with City requirements (Manteca Municipal Code 17.52.050). Primary access to the project site would be provided by three driveways: one with full access on Airport Way, one with right-in/right-out only access on Lathrop Road, and one with full access on Lathrop Road.

Infrastructure

The project would include connections to the City's storm drain, water and wastewater utilities, described as follows.

- Storm drainage: The proposed project would connect to use the City's storm drainage system. Existing storm drain infrastructure is located at the southern end of the site. The project would install on-site storm drain pipes to collect and convey stormwater into the City's system.
- Water: Existing City water lines are located along Airport Way. The project would install on-site water lines to connect to the City's system to provide domestic water to serve the project.
- Wastewater: Existing wastewater infrastructure is located at the southern end of the site. The project would install on-site wastewater lines to connect to the City's system.

Landscaping

Project landscaping would include new trees, shrubs and ground cover with a new irrigations system that meets the current water usage requirements.

Energy Conservation

The proposed project would incorporate energy conservation components, including electric vehicle charging stations, LED lighting (interior and exterior) , and exterior fuel canopy lights will adjust to 30% brightness when cars are not present. In addition, the project is required to meet all requirements stated in the California Green Building Standards Code (CCR Title 24 Part 6 and Part 11).

2.3 Project Construction and Phasing

For the purposes of modeling, it was assumed that construction of the project would commence in June 2023[1] and would last approximately 13 months, ending in June 2024. The project was assumed to be operational for 30 years and then decommissioned and removed at the end of its lifetime. The analysis contained herein is based on the following subset area schedule assumptions (duration of phases is approximate):

- Site preparation – 1 week
- Grading – 2 weeks
- Building construction – 11 months
- Paving – 1 month
- Architectural coating – 1 month

The majority of the phases listed above would occur concurrently and would not occur sequentially in isolation. The estimated construction duration was provided by the project applicant. Detailed construction equipment modeling assumptions are provided in Appendix A, CalEEMod Outputs. It is anticipated that the project grading would be balanced on site. All construction equipment and construction worker vehicles would be staged (parked) on site during construction and meet all the requirements of CCR Title 24 Part 11.

The construction equipment mix used for estimating the construction emissions of the project is based on information provided by the project applicant and is shown in Table 1.

Table 1. Construction Scenario Assumptions

Construction Phase	One-Way Vehicle Trips			Equipment		
	Average Daily Worker Trips	Average Daily Vendor Truck Trips	Total Haul Truck Trips	Equipment Type	Quantity	Usage Hours
Site preparation	18	4	0	Rubber-tired dozers	3	8
				Tractors/loaders/ backhoes	4	8
Grading	16	4	0	Excavators	1	8
				Graders	1	8
				Rubber-tired dozers	1	8

[1] The analysis assumes a construction start date of June 2023, which represents the earliest date construction would initiate. Assuming the earliest start date for construction represents the worst-case scenario for criteria air pollutant emissions because equipment and vehicle emission factors for later years would be slightly less due to more stringent standards for in-use off-road equipment and heavy-duty trucks, as well as fleet turnover replacing older equipment and vehicles in later years.

Table 1. Construction Scenario Assumptions

Construction Phase	One-Way Vehicle Trips			Equipment		
	Average Daily Worker Trips	Average Daily Vendor Truck Trips	Total Haul Truck Trips	Equipment Type	Quantity	Usage Hours
				Tractors/loaders/ backhoes	3	8
Building construction	60	24	0	Cranes	1	7
				Forklifts	3	8
				Generator sets	1	8
				Tractors/loaders/ backhoes	3	7
Paving	20	4	60	Welders	1	8
				Cement and mortar mixers	2	6
				Pavers	1	8
				Paving equipment	2	6
				Rollers	2	6
Architectural coating	12	4	0	Tractors/loaders/ backhoes	1	8

Note: See Appendix A for details.

2.4 Project Approvals

The project requires the following approvals from the City:

- Planning Commission Approval
- Adoption of updated Mitigation Monitoring and Reporting Program, confirming applicable mitigation from the General Plan Environmental Impact Report (EIR)

INTENTIONALLY LEFT BLANK

3 Initial Study Checklist

1. **Project title:**

   Airport Plaza Project

2. **Lead agency name and address:**

   City of Manteca
   Development Services
   1215 W. Center St., Suite 201
   Manteca, CA 95337

3. **Contact person and phone number:**

   Mallorie Fenrich, Acting Senior Planner
   1215 W. Center St., Suite 201
   Manteca, CA 95337
   (209) 456-8514

4. **Project location:**

   2060 W. Lathrop Road, Manteca, CA 95336
   Southeast corner of North Airport Way and East Lathrop Road, Manteca, California

5. **Project sponsor's name and address:**

   Paul Kamboj
   Two Guys Food and Fuel
   147 Lathrop Road
   Manteca, California 9533

6. **General plan designation:**

   Neighborhood Commercial

7. **Zoning:**

   Neighborhood Commercial (CN)

8. **Description of project. (Describe the whole action involved, including but not limited to later phases of the project, and any secondary, support, or off-site features necessary for its implementation. Attach additional sheets if necessary):**

   See Section 2.2

9. Surrounding land uses and setting: Briefly describe the project's surroundings:

See Section 2.1

10. Other public agencies whose approval is required (e.g., permits, financing approval, or participation agreement):

San Joaquin County Multi-Species Habitat Conservation & Open Space Plan (SJMSCP), San Joaquin County Department of Environmental Health, and San Joaquin Valley Air Pollution Control District.

11. Have California Native American tribes traditionally and culturally affiliated with the project area requested consultation pursuant to Public Resources Code section 21080.3.1? If so, is there a plan for consultation that includes, for example, the determination of significance of impacts to tribal cultural resources, procedures regarding confidentiality, etc.?

The City sent out notification letters for the proposed project on February 9, 2023 pursuant to Public Resources Code §21080.3.1(b). Letters were sent to the list of tribes provided by the Native American Heritage Commision (NAHC) that are traditionally and culturally affiliated with the geographic area of the proposed project. Out of 12 tribes, no tribes requested consultation or provided additional information regarding potential impacts to tribal cultural resources.

Environmental Factors Potentially Affected

The environmental factors checked below would be potentially affected by this project, involving at least one impact that is a "Potentially Significant Impact," as indicated by the checklist on the following pages.

☐ Aesthetics	☐ Agriculture and Forestry Resources	☒ Air Quality
☒ Biological Resources	☒ Cultural Resources	☐ Energy
☒ Geology and Soils	☐ Greenhouse Gas Emissions	☐ Hazards and Hazardous Materials
☐ Hydrology and Water Quality	☐ Land Use and Planning	☐ Mineral Resources
☐ Noise	☐ Population and Housing	☐ Public Services
☐ Recreation	☒ Transportation	☒ Tribal Cultural Resources
☐ Utilities and Service Systems	☐ Wildfire	☒ Mandatory Findings of Significance

Determination (To be completed by the Lead Agency)

On the basis of this initial evaluation:

☐ I find that the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.

☒ I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.

☐ I find that the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.

☐ I find that the proposed project MAY have a "potentially significant impact" or "potentially significant unless mitigated" impact on the environment, but at least one effect (1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and (2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.

☐ I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier ENVIRONMENTAL IMPACT REPORT or NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier ENVIRONMENTAL IMPACT REPORT or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.

Mallorie Fenrich

Date

Evaluation of Environmental Impacts

1. A brief explanation is required for all answers except "No Impact" answers that are adequately supported by the information sources a lead agency cites in the parentheses following each question. A "No Impact" answer is adequately supported if the referenced information sources show that the impact simply does not apply to projects like the one involved (e.g., the project falls outside a fault rupture zone). A "No Impact" answer should be explained where it is based on project-specific factors as well as general standards (e.g., the project would not expose sensitive receptors to pollutants, based on a project-specific screening analysis).
2. All answers must take account of the whole action involved, including off-site as well as on-site, cumulative as well as project-level, indirect as well as direct, and construction as well as operational impacts.
3. Once the lead agency has determined that a particular physical impact may occur, then the checklist answers must indicate whether the impact is potentially significant, less than significant with mitigation, or less than significant. "Potentially Significant Impact" is appropriate if there is substantial evidence that an effect may be significant. If there are one or more "Potentially Significant Impact" entries when the determination is made, an Environmental Impact Report (EIR) is required.
4. "Negative Declaration: Less Than Significant With Mitigation Incorporated" applies where the incorporation of mitigation measures has reduced an effect from "Potentially Significant Impact" to a "Less Than Significant Impact." The lead agency must describe the mitigation measures, and briefly explain how they reduce the effect to a less than significant level.
5. Earlier analyses may be used where, pursuant to the tiering, program EIR, or other CEQA process, an effect has been adequately analyzed in an earlier EIR or negative declaration. Section 15063(c)(3)(D). In this case, a brief discussion should identify the following:
    a. Earlier Analysis Used. Identify and state where they are available for review.
    b. Impacts Adequately Addressed. Identify which effects from the above checklist were within the scope of and adequately analyzed in an earlier document pursuant to applicable legal standards, and state whether such effects were addressed by mitigation measures based on the earlier analysis.
    c. Mitigation Measures. For effects that are "Less Than Significant With Mitigation Measures Incorporated," describe the mitigation measures which were incorporated or refined from the earlier document and the extent to which they address site-specific conditions for the project.
6. Lead agencies are encouraged to incorporate into the checklist references to information sources for potential impacts (e.g., general plans, zoning ordinances). Reference to a previously prepared or outside document should, where appropriate, include a reference to the page or pages where the statement is substantiated.
7. Supporting Information Sources: A source list should be attached, and other sources used or individuals contacted should be cited in the discussion.
8. This is only a suggested form, and lead agencies are free to use different formats; however, lead agencies should normally address the questions from this checklist that are relevant to a project's environmental effects in whatever format is selected.
9. The explanation of each issue should identify:
    a. the significance criteria or threshold, if any, used to evaluate each question; and
    b. the mitigation measure identified, if any, to reduce the impact to less than significance

3.1 Aesthetics

		Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
I.	**AESTHETICS** – Except as provided in Public Resources Code Section 21099, would the project**:**				
a)	Have a substantial adverse effect on a scenic vista?	☐	☐	☒	☐
b)	Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?	☐	☐	☐	☒
c)	In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?	☐	☐	☒	☐
d)	Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?	☐	☐	☒	☐

a) Would the project have a substantial adverse effect on a scenic vista?

A project which substantially blocks or alters a view of a scenic vista would be a potentially significant impact. The City's General Plan acknowledges that agricultural and open space lands within and around the City are visual amenities; however, there are no officially designated scenic vista points in the City (City of Manteca 2003). The project site itself consists of open and undeveloped land but does not contain any visually important resources such as trees or rock formations, and the site appears to have been disturbed by regular mowing and/or disking. The project site would not be considered a scenic vista, and the views of the site are not unique to the surrounding visual setting.

The proposed project would occur in an area surrounded by residential development, open space lands, and agricultural land. The land east and south of the site is comprised of low-density residential development (primarily two-story single-family homes). Across Airport Way to the west, there are homes and ranchettes associated with nearby agricultural lands. The parcel north of the site across Lathrop Road consists of flat, undeveloped land lacking visually important resources, similar to the project site. Fruit orchards are present northwest of the site across Airport Way and Lathrop Road. The project site is generally flat with unobstructed views of the surrounding agricultural and open space lands. The tallest component of the proposed project would be at the convenience store exterior, with a height of approximately 29 feet at the highest point (the "tower," which would display the main exterior signage). The main building height of the convenience store and other proposed buildings would be approximately 21 feet

at the top of the parapets, which would be consistent with the current visual character of the area. For reference, the two-story single-family homes surrounding the site to the east and south are approximately 25 feet in height. The project site is consistent with the underlying zoning and land use designation of Neighborhood Commercial, which allows a maximum height of 45 feet (Section 17.26.020 of the City Code). The proposed height of project buildings would not obstruct any potential scenic views of surrounding agricultural and open space lands. Nevertheless, the City does not identify views of agricultural and open space lands to be "protected"; therefore, any obstruction that does occur would not be significant. For these reasons, the proposed project would have a **less-than-significant impact** on scenic vistas.

b) Would the project substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?

There are no Officially Designated or Eligible State Scenic Highways within the project area, and the project site is not located within view of any scenic highways (Caltrans 2023). Therefore, the proposed project would not substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway. The proposed project would have **no impact** related to scenic resources.

c) In non-urbanized areas, would the project substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?

The project site is located within an urbanized area, which includes incorporated cities of at least 100,000 persons or with a population of less than 100,000 persons if the population of that city and not more than two contiguous incorporated cities combined equals at least 100,000 persons. As of 2021, the City of Manteca has a population of approximately 85,000, but the City is contiguous with the City of Stockton, which has a population of approximately 322,000 (U.S. Census Bureau 2021). The project site is in an urbanized area, which only requires an evaluation of consistency with regulations that govern scenic quality, per CEQA Guidelines Appendix G. Therefore, the proposed project may result in a significant impact if it is found that the project would conflict with zoning or other regulations governing scenic quality, such as policies within the City's General Plan or design standards in the City Code.

The project site is consistent with the underlying zoning and land use designation of Neighborhood Commercial (City of Manteca 2019), which provides for "locally oriented retail and service uses, offices, restaurants, and service stations, public and quasi-public uses and similar and compatible uses" (City of Manteca 2003). As discussed under threshold 3.1(a), there would be no project components taller than the height limit of 45 feet in the Neighborhood Commercial Zone (Section 17.26.020 of the City Code). Building exteriors would reach a maximum height of 29 feet. The City Code does not specify requirements for density or minimum open space for the Neighborhood Commercial Zone but does specify a maximum floor area ratio of 0.6. As currently designed, the proposed project involves 16,946 square feet of building space on a 134,164-square-foot parcel, which would be a floor area ratio of approximately 0.12. The project would be consistent with applicable standards such as those regarding landscaping (Chapter 17.48 of the City Code) and lighting (Chapter 17.50 of the City Code). Further discussion is presented in Section 3.11 of this Initial Study. The City's General Plan contains several policies related to visual quality (e.g., RC-P-16, LU-P-43), but they are not applicable to the project as they concern the provision of public and private open space within urbanized parts of the City; the project site is not subject to minimum open space requirements. For the reasons described above, the proposed project would have a **less-than-significant impact** regarding conflict with applicable zoning and other regulations governing scenic quality.

d) Would the project create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?

The area surrounding the project site is urbanized, and there are existing sources of light and glare created by streetlights, car headlights, and interior and exterior lighting from buildings. The proposed project would create additional sources of light and glare from car headlights accessing the project site, as well as interior and exterior lighting from the fuel pumps and proposed buildings.

Section 17.50.060 of the City Code identifies general lighting standards for light shielding, illumination levels, and nuisance prevention. The City's General Plan also includes Policy CD-P-45 promoting directional shielding of exterior lighting to minimize glare, and CD-P-46 to provide automatic shutoff or motion sensors for lighting features. The project would be required to adhere to the City's lighting requirements and design standards. All lighting would be directed downward or toward structures, shielded, and designed to illuminate at the minimum level necessary for safety and security. Additionally, Section 17.50.070 of the City Code states that a preliminary outdoor lighting plan must be submitted to the City as part of each site plan and design review application, and a final plan must be submitted as part of an application for a building permit. Therefore, the proposed project would have a **less-than-significant impact** regarding light and glare.

3.2 Agriculture and Forestry Resources

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
II. AGRICULTURE AND FORESTRY RESOURCES – In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Dept. Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state's inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment project; and forest carbon measurement methodology provided in Forest Protocols adopted by the California Air Resources Board. Would the project:				
a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?	☐	☐	☐	☒
b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?	☐	☐	☐	☒
c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code Section 12220(g)), timberland (as defined by Public Resources Code Section 4526), or timberland zoned Timberland Production (as defined by Government Code Section 51104(g))?	☐	☐	☐	☒

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
d) Result in the loss of forest land or conversion of forest land to non-forest use?	☐	☐	☐	☒
e) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?	☐	☐	☐	☒

a) Would the project convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?

According to the California Department of Conservation, the project site is designated as Rural Residential Land, which is a subtype in the "Other Land" category (DOC 2022). The Rural Residential Land designation applies to residential areas of 1 to 5 structures per 10 acres of land. The project area is surrounded by low-density residential development to the east and south and rural ranchettes to the west; however, the project site itself is not developed with residential uses nor is it used for agricultural purposes. The site is zoned and designated Neighborhood Commercial (City of Manteca 2019) and was not anticipated by the General Plan to be used for agricultural purposes (City of Manteca 2003). Therefore, the proposed project would have **no impact**.

b) Would the project conflict with existing zoning for agricultural use, or a Williamson Act contract?

The project site is not zoned for agricultural use, and there is no Williamson Act contract. The site is zoned and designated Neighborhood Commercial (City of Manteca 2019) and would not conflict with existing zoning for agricultural use, or a Williamson Act contract. Therefore, the proposed project would have **no impact**.

c) Would the project conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code Section 12220(g)), timberland (as defined by Public Resources Code Section 4526), or timberland zoned Timberland Production (as defined by Government Code Section 51104(g))?

The site is zoned and designated Neighborhood Commercial (City of Manteca 2019) and would not conflict with existing zoning for forest land. No portion of the project site is considered forest land[2] as defined in California Public Resources Code Section 12220(g). Timberland[3] (as defined by California Public Resources

[2] "Forest land" is land that can support 10% native tree cover of any species, including hardwoods, under natural conditions, and that allows for management of one or more forest resources, including timber, aesthetics, fish and wildlife, biodiversity, water quality, recreation, and other public benefits.

[3] "Timberland" means land, other than land owned by the federal government and land designated by the State Board of Forestry and Fire Protection as experimental forest land, which is available for, and capable of, growing a crop of trees of a commercial species used to produce lumber and other forest products, including Christmas trees. Commercial species shall be determined by the board on a district basis.

Code Section 4526) or timberland-zoned timberland production[4] (as defined by Government Code Section 51104(g)) is not present on site; nor are there any active or potential commercial timber operations present in the area. Therefore, the proposed project would not conflict with lands zoned for forest land, timberland, or timberland production, and there would be **no impact**.

d) Would the project result in the loss of forest land or conversion of forest land to non-forest use?

Refer to answer provided in 'c' above.

e) Would the project involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?

Refer to answers provided in 'a', 'b', and 'c' above.

3.3 Air Quality

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
III. AIR QUALITY – Where available, the significance criteria established by the applicable air quality management district or air pollution control district may be relied upon to make the following determinations. Would the project:				
a) Conflict with or obstruct implementation of the applicable air quality plan?	☐	☐	☒	☐
b) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?	☐	☐	☒	☐
c) Expose sensitive receptors to substantial pollutant concentrations?	☐	☒	☐	☐
d) Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?	☐	☐	☒	☐

a) Would the project conflict with or obstruct implementation of the applicable air quality plan?

A project is non-conforming with an air quality plan if it conflicts with or delays implementation of any applicable attainment or maintenance plan. A project is conforming if it complies with all applicable San Joaquin Valley Air Pollution Control District (SJVAPCD) rules and regulations, complies with all proposed control measures that are not yet adopted from the applicable plan(s), and is consistent with the growth forecasts in the applicable plan(s) (or is directly included in the applicable plan). Zoning changes, specific plans, general plan amendments and similar land use plan changes that do not increase dwelling unit

[4] "Timberland production zone" or "TPZ" means an area, which is devoted to and used for growing and harvesting timber, or for growing and harvesting timber and compatible uses.

density, do not increase vehicle trips, and do not increase vehicle miles traveled (VMT) are also deemed to comply with the applicable air quality plan (SJVAPCD 2015).

The project would comply with applicable SJVAPCD rules and regulations, such as Regulation VIII (Fugitive PM_{10} Prohibitions) and IX (Mobile and Indirect Sources). The project would not conflict with existing land uses or result in population growth. The project site is currently zoned as Neighborhood Commercial and permits gas stations, restaurants, convenience stores, and car washes as set forth in Table 17.22.020-1 of the City's Municipal Code. Emissions during construction and operation would not exceed the SJVAPCD significance threshold. Therefore, the project would be consistent with the zoned use for the site. The project would result in a **less-than-significant impact** during construction and operation.

b) Would the project result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?

Air pollution is largely a cumulative impact. The nonattainment status of regional pollutants is a result of past and present development, and SJVAPCD develops and implements plans for future attainment of ambient air quality standards. Based on these considerations, project-level thresholds of significance for criteria pollutants are relevant in the determination of whether a project's individual emissions would have a cumulatively significant impact on air quality.

Construction Emissions

Proposed construction activities would result in the temporary addition of pollutants to the local airshed caused by on-site sources (i.e., off-road construction equipment, soil disturbance, and volatile organic compound off-gassing) and off-site sources (i.e., on-road vendor trucks, haul trucks, and worker vehicle trips). Construction emissions can vary substantially from day to day, depending on the level of activity, the specific type of operation, and, for particulate matter, the prevailing weather conditions. Therefore, such emission levels can only be approximately estimated.

The California Emissions Estimator Model (CalEEMod) Version 2022.1.1.4 was used to estimate emissions from construction of the project. Internal combustion engines used by construction equipment, trucks, and worker vehicles would result in emissions of volatile organic compounds, oxides of nitrogen (NO_x), carbon monoxide (CO), coarse particulate matter (PM_{10}), and fine particulate matter ($PM_{2.5}$). PM_{10} and $PM_{2.5}$ emissions would also be generated by entrained dust, which results from the exposure of earth surfaces to wind from the direct disturbance and movement of soil. The project would be required to comply with SJVAPCD Rule 8021 to control dust emissions generated during any dust-generating activities. Standard construction practices that would be employed to reduce fugitive dust emissions include watering of the active dust areas two times per day, with additional watering depending on weather conditions. The CalEEMod default assumptions were used for estimating fugitive dust emissions from grading on site. Table 2 presents the annual emissions reported as the highest rolling 12 months estimated during construction of the project. Details of the emission calculations are provided in Appendix A.

Table 2. Estimated Maximum Construction Criteria Air Pollutant Emissions – Project

Month/Year	ROG	NO_x	CO	SO_x	PM_{10}	$PM_{2.5}$
	Tons per month					
June 2023	0.04	0.37	0.38	<0.00	0.02	0.01
July 2023	0.04	0.37	0.38	<0.00	0.02	0.01
August 2023	0.04	0.37	0.38	<0.00	0.02	0.01
September 2023	0.08	0.70	0.73	<0.00	0.03	0.03
October 2023	0.08	0.70	0.73	<0.00	0.03	0.03
November 2023	0.08	0.70	0.73	<0.00	0.03	0.03
December 2023	0.08	0.70	0.73	<0.00	0.03	0.03
January 2024	0.08	0.70	0.73	<0.00	0.03	0.03
February 2024	0.08	0.70	0.73	<0.00	0.03	0.03
March 2024	0.07	0.60	0.63	<0.00	0.03	0.02
April 2024	0.07	0.60	0.63	<0.00	0.03	0.02
May 2024	0.07	0.60	0.63	<0.00	0.03	0.02
June 2024	0.07	0.01	0.01	0.01	0.01	0.01
Maximum Rolling 12-Month Total Emissions	**0.87**	**7.09**	**7.40**	**0.02**	**0.31**	**0.27**
SJVAPCD Threshold	*10*	*10*	*100*	*27*	*15*	*15*
Threshold Exceeded?	**No**	**No**	**No**	**No**	**No**	**No**

Notes: ROG = reactive organic gases; NO_x = oxides of nitrogen; CO = carbon monoxide; SO_x = sulfur oxides; PM_{10} = coarse particulate matter; $PM_{2.5}$ = fine particulate matter; <0.00 = less than 0.004; SJVAPCD = San Joaquin Valley Air Pollution Control District.

As shown in Table 2, project construction would not exceed SJVAPCD's rolling 12-month thresholds. Therefore, construction impacts associated with criteria air pollutant emissions would be less than significant.

Operational Emissions

Emissions from the operational phase of the project were estimated using CalEEMod. Operational year 2024 was assumed, as it would be the first year following completion of construction. Reactive organic gas (ROG) emissions from loading, breathing, refueling, spillage, and hose permeation were estimated using a spreadsheet model and emission factors from the California Air Resources Board's (CARB) Gasoline Service Station Industrywide Risk Assessment Technical Guidance (CARB 2022). Table 3 presents the estimated emissions during operation.

Table 3. Estimated Maximum Annual Operational Criteria Air Pollutant Emissions

Emissions Source	ROG	NO_x	CO	SO_x	PM_{10}	$PM_{2.5}$
	Tons per year					
Area	0.07	<0.00	0.06	<0.00	<0.00	<0.00
Energy	<0.00	0.04	0.04	<0.00	<0.00	<0.00
Mobile	4.11	2.82	20.6	0.04	1.19	0.24
Stationary	0.53	0.00	0.00	0.00	0.00	0.00
Total	**4.71**	**2.86**	**20.70**	**0.04**	**1.19**	**0.24**
SJVAPCD Threshold	*10*	*10*	*100*	*27*	*15*	*15*
Threshold Exceeded?	**No**	**No**	**No**	**No**	**No**	**No**

Notes: ROG = reactive organic gases; NO_x = oxides of nitrogen; CO = carbon monoxide; SO_x = sulfur oxides; PM_{10} = coarse particulate matter; $PM_{2.5}$ = fine particulate matter; <0.00 = less than 0.004; SJVAPCD = San Joaquin Valley Air Pollution Control District.
See Appendix A for complete results. Totals may not sum precisely due to rounding.
Stationary emissions include loading, breathing, refueling, spillage, and hose permeation from the gasoline station.

As shown in Table 3, the project would not exceed SJVAPCD's significance thresholds during operations. Therefore, operational impacts associated with criteria air pollutant emissions would be **less than significant**.

For purposes of this air quality analysis and consistent with SJVAPCD guidance documents, actions that exceed criteria pollutant National Ambient Air Quality Standards (NAAQS) (i.e., primary standards designed to safeguard the health of people considered to be sensitive receptors while outdoors and secondary standards designed to safeguard human welfare) or the U.S. Environmental Protection Agency's Prevention of Significant Deterioration Significant Impact Levels would result in significant impacts. Additionally, actions that violate California Ambient Air Quality Standards (CAAQS) developed by CARB are considered significant.

Determination of whether project emissions would violate any ambient air quality standard is largely a function of air quality dispersion modeling. The SJVAPCD recommends that an ambient air quality analysis be performed when emissions of any criteria pollutant would equal or exceed any applicable threshold of significance for criteria pollutants or 100 pounds per day of any criteria pollutant. If the impacts resulting from a project's emissions would not exceed the CAAQS and NAAQS at the project's property boundaries, the project would not violate any air quality standard or contribute substantially to an existing or projected air quality violation (SJVAPCD 2015). As shown in Appendix A, the project did not exceed 100 pounds per day on site during construction or operation; therefore, the project does not require an air quality dispersion modeling assessment.

Air pollution is largely a cumulative impact. The nonattainment status of regional pollutants is a result of past and present development, and the SJVAPCD develops and implements plans for future attainment of ambient air quality standards. Based on these considerations, project-level thresholds of significance for criteria pollutants are relevant in the determination of whether a project's individual emissions would have a cumulatively significant impact on air quality. As previously described, the project would have a less-than-significant impact for construction and operation.

The San Joaquin Valley Air Basin (SJVAB) is a nonattainment area for ozone (O_3), PM_{10}, and $PM_{2.5}$ under the NAAQS and/or CAAQS. The poor air quality in the SJVAB is the result of cumulative emissions from motor vehicles, off-road equipment, commercial and industrial facilities, and other emission sources. Projects that emit these pollutants or their precursors (i.e., ROG and NO_x for O_3) potentially contribute to poor air quality. Annual construction emissions associated with the project would not exceed the SJVAPCD significance thresholds for criteria pollutants. Accordingly, the project would result in a less-than-significant increase in emissions of nonattainment pollutants. The project would not generate a significant long-term increase in operational emissions, as shown in Table 3. Furthermore, the project would not conflict with the SJVAPCD Ozone Attainment Plans, or the PM_{10} or $PM_{2.5}$ Attainment Plan, which address the cumulative emissions in the SJVAB and account for emissions associated with construction activity in the SJVAB.

As shown in Tables 2 and 3, the project would not exceed the SJVAPCD significance thresholds. Based on these considerations, the project would not result in a cumulatively considerable increase in emissions of nonattainment pollutants. Impacts would be **less than significant**.

c) Would the project expose sensitive receptors to substantial pollutant concentrations?

Air quality varies as a direct function of the amount of pollutants emitted into the atmosphere, the size and topography of the air basin, and the prevailing meteorological conditions. Air quality problems arise when the rate of pollutant emissions exceeds the rate of dispersion. Reduced visibility, eye irritation, and adverse health impacts on those persons termed "sensitive receptors" are the most serious hazards of existing air quality conditions in the area. Some land uses are considered more sensitive to changes in air quality than others, depending on the population groups and the activities involved. People most likely to be affected by air pollution, as identified by CARB, include children, the elderly, athletes, and people with cardiovascular and chronic respiratory diseases; however, for the purposes of this analysis, residents are also considered sensitive receptors. As such, sensitive receptors include residences, schools, playgrounds, child-care centers, athletic facilities, long-term health-care facilities, rehabilitation centers, convalescent centers, and retirement homes. The closest off-site sensitive receptors to the project are existing residential land uses located adjacent to the project Site east and southern boundary. As discussed, the project would comply with SJVAPCD Rule 8021, which requires applicants to develop, prepare, submit, obtain approval of, and implement a dust control plan.

Valley Fever Exposure

The project site is located in San Joaquin County, where Valley Fever, caused by the fungus *Coccidioides immitis*, is considered endemic. Rates of Valley Fever are relatively high in San Joaquin County. The San Joaquin County Public Health Services Department reported 259 cases of Valley Fever in 2018, the highest ever recorded (San Joaquin County Public Health Services 2019). This fungus lives in the top 2–12 inches of soil; therefore, during soil disturbance, the fungal spores can be released into the air. The spores are too small to be seen by the naked eye, and there is no reliable way to test the soils for spores (CDPH 2019). The disease is caused by inhalation of dust containing the fungal spore. Most people who are exposed have no symptoms or very mild systems. However, in a small percentage of the population, the fungal spore can generate more serious systems of meningitis, pneumonia, or chronic fatigue. Construction workers have increased risk of exposure, since their job involves the disturbance of soils where fungal spores are found. Valley Fever infection rates are highest in California from June to November, and the illness is endemic in San Joaquin County. Therefore, a risk of Valley Fever infection exists for construction personnel working on the project in the peak summer and fall months. Valley Fever risk from construction-related dust from the project will be partially mitigated by implementation of an SJVAPCD–approved dust control plan. However, implementation of mitigation measures (MM-) AQ-1 and MM-AQ-2 would further reduce the risk of Valley Fever infection. Therefore, with implementation of MM-AQ-1 and MM-AQ-2, impacts to construction workers and nearby sensitive receptors, would **less than significant with mitigation**.

Health Impacts of Toxic Air Contaminants

A substance is considered toxic if it has the potential to cause adverse health effects in humans, including increasing the risk of cancer upon exposure, or acute (immediate) and/or chronic (cumulative) non-cancer health effects. A toxic substance released into the air is considered a toxic air contaminant (TAC). Adverse health effects associated with exposure to TACs may include carcinogenic (i.e., cancer-causing) and noncarcinogenic effects. Examples include certain aromatic and chlorinated hydrocarbons, certain metals, and asbestos. TACs are generated by a number of sources, including stationary sources such as dry cleaners, gas stations, combustion sources, and laboratories; mobile sources such as automobiles; and

area sources such as landfills. Non-carcinogenic effects typically affect one or more target organ systems and may be experienced on either hort-term (acute) or long-term (chronic) exposure to a given TAC.

TACs are identified by federal and state agencies based on a review of available scientific evidence. In the State of California, TACs are identified through a two-step process that was established in 1983 under the Toxic Air Contaminant Identification and Control Act. This two-step process of risk identification and risk management and reduction was designed to protect residents from the health effects of toxic substances in the air. In addition, the California Air Toxics "Hot Spots" Information and Assessment Act, Assembly Bill (AB) 2588, was enacted by the legislature in 1987 to address public concern over the release of TACs into the atmosphere.

Project construction would result in emissions of diesel particulate matter from heavy construction equipment and trucks accessing the Site. Diesel particulate matter is characterized as a TAC by the State of California. The Office of Environmental Health Hazard Assessment has identified carcinogenic and chronic noncarcinogenic effects from long-term exposure but has not identified health effects due to short-term exposure to diesel exhaust. According to the Office of Environmental Health Hazard Assessment, health risk assessments, which determine the exposure of sensitive receptors to toxic emissions, should be based on a 30-year exposure period for the maximally exposed individual resident; however, such assessments should be limited to the period/duration of activities associated with the project. Thus, the duration of the proposed construction activities would only constitute a small percentage of the total 30-year exposure period. Due to this relatively short period of exposure (13 months) and minimal particulate emissions on site, TACs generated by the project would not result in concentrations causing significant health risks.

During operation, the project would emit TACs from the gasoline station. A health risk assessment was prepared to evaluate potential health risk impacts of the project during operation and is included as Appendix B. The results of the health risk assessment are shown in Table 4.

Table 4. Operational Health Risk Assessment Results

Impact Parameter	Units	Project Impact	CEQA Threshold	Level of Significance
Maximum Individual Cancer Risk – Residential	Per Million	3.7	20	Less than Significant
Maximum Individual Cancer Risk – Worker	Per Million	0.2	20	Less than Significant
Chronic Hazard Index – Residential	Index Value	0.01	1.0	Less than Significant
Chronic Hazard Index – Worker	Index Value	0.003	1.0	Less than Significant
Acute Hazard Index – Residential	Index Value	0.08	1.0	Less than Significant
Acute Hazard Index – Worker	Index Value	0.05	1.0	Less than Significant

Source: SJVAPCD 2015.
Note: CEQA = California Environmental Quality Act.
See Appendix B.

As shown in Table 4, project operation would not exceed the SJVAPCD thresholds for cancer, chronic hazard index, or acute hazard index. The project operational TAC health risk impacts would be considered less than significant.

Health Impacts of Carbon Monoxide

As described previously, exposure to high concentrations of CO can result in dizziness, fatigue, chest pain, headaches, and impairment of central nervous system functions. Mobile-source impacts, including those related to CO, occur essentially on two scales of motion. Regionally, project-related construction travel

would add to regional trip generation and increase the VMT within the local airshed and the SJVAB. Locally, construction traffic would be added to the roadway system in the vicinity of the project site. Although the SJVAB is currently an attainment area for CO, there is a potential for the formation of microscale CO "hotspots" to occur immediately around points of congested traffic. Hotspots can form if such traffic occurs during periods of poor atmospheric ventilation, is composed of a large number of vehicles cold-started and operating at pollution-inefficient speeds, and/or is operating on roadways crowded with non-project traffic. Because of continued improvement in vehicular emissions at a rate faster than the rate of vehicle growth and/or congestion, the potential for CO hotspots in the SJVAB is steadily decreasing.

The SJVAPCD Guidance for Assessing and Mitigating Air Quality Impacts states that a quantitative CO hotspots analysis be performed if either of the following two conditions exist: (1) a traffic study for the project indicates that the level of service (LOS) on one or more streets or at one or more intersections in the project vicinity will be reduced to LOS E or F, or (2) a traffic study indicates that the project will substantially worsen an already existing LOS F on one or more streets or at more or more intersections in the project vicinity (SJVAPCD 2015). The project would cause a temporary increase in traffic during the 13-month construction period. The Transportation Impact Study for the project showed that during operation the project would not cause the LOS at any intersection to reduce to LOS E or F with recommended conditions of approval (Appendix D). Therefore, the project would not materially contribute to the local traffic or impact local intersections level of service. As such, impacts to sensitive receptors with regard to potential CO hotspots resulting from the project's contribution to cumulative traffic-related air quality impacts would be less than significant.

Health Impacts of Other Criteria Air Pollutants

Construction of the project would not exceed the SJVAPCD threshold for ROGs. Specific ROGs may be TACs; however, ROGs are not expected to present risk of health impacts even if the specific ROGs associated with project construction aren't entirely known. Some ROGs would be associated with motor vehicles and construction equipment, whereas others are associated with architectural coatings, the emissions of which would not result in the exceedances of the SJVAPCD's threshold as shown in Table 2. Generally, the ROGs in architectural coatings are of relatively low toxicity. Additionally, SJVAPCD Rule 4601 restricts the ROG content of coatings for both construction and operational applications.

Operation of the project would not result in emissions that exceed the SJVAPCD's emission thresholds for any criteria air pollutants, including ROGs, NO_x, CO, sulfur oxides (SO_x), PM_{10}, or $PM_{2.5}$. Some ROGs would be associated with motor vehicles and construction equipment, while others are associated with architectural coatings, the emissions of which would not result in the exceedances of the SJVAPCD's thresholds as shown in Table 3. Generally, the ROGs in architectural coatings are of relatively low toxicity.

In addition, ROGs and NO_x are precursors to O_3, for which the SJVAB is designated as nonattainment with respect to the NAAQS and CAAQS (the U.S. Environmental Protection Agency has designated the SJVAB as a nonattainment area for the federal 8-hour O_3 standard, and CARB has designated the SJVAB as a nonattainment area for the state 1-hour and 8-hour O_3 standards). The health effects associated with O_3 are generally associated with reduced lung function. The contribution of ROGs and NO_x to regional ambient O_3 concentrations is the result of complex photochemistry. The increases in O_3 concentrations in the SJVAB due to O_3 precursor emissions tend to be found downwind from the source location to allow time for the photochemical reactions to occur. However, the potential for exacerbating excessive O_3 concentrations would also depend on the time of year that the ROG emissions would occur because

exceedances of the O_3 ambient air quality standards tend to occur between April and October, when solar radiation is highest.

The holistic effect of a single project's emissions of O_3 precursors is speculative due to the lack of quantitative methods to assess this impact. Nonetheless, the ROG and NO_x emissions associated with project construction could minimally contribute to regional O_3 concentrations and the associated health impacts. O_3 health impacts are associated with respiratory irritation, which may be experienced by nearby receptors during the periods of heaviest use of off-road construction equipment. The project would not exceed the SJVAPCD threshold for O_3 precursor NO_x during construction; thus, there would be a less-than-significant impact during construction. In addition, the long-term operational emissions would not exceed any significance thresholds for O_3 precursors.

Construction and operation of the project would not exceed thresholds for PM_{10} or $PM_{2.5}$ and would not contribute to exceedances of the NAAQS and CAAQS for particulate matter. The project would also not result in substantial diesel particulate matter emissions during construction and operation and therefore, would not result in significant health effects related to diesel particulate matter exposure. Because the project would not exceed thresholds for PM_{10} or $PM_{2.5}$ during construction and operation, health impacts would be less than significant.

According to the construction emissions analysis, construction of the project would not contribute to exceedances of the NAAQS and CAAQS for NO_2 during construction. Emissions from construction of the project would be short-term in duration, and the long-term operational emissions would not exceed any significance thresholds. NO_2 and NO_x health impacts are associated with respiratory irritation, which may be experienced by nearby receptors during the periods of heaviest use of off-road construction equipment. Therefore, the construction- and operation-related health impacts for NO_2 would be considered **less than significant.**

Mitigation Measures: The following mitigation measures are provided to reduce the impacts to construction workers and nearby sensitive receptors.

MM-AQ-1 Between June 1 and November 30, when Valley Fever rates of infection are the highest, additional dust suppression measures (such as additional water or the application of additional soil stabilizer) will be implemented prior to and immediately following ground-disturbing activities if wind speeds exceed 15 mph or temperatures exceed 95°F for 3 consecutive days. The additional dust suppression will continue until winds are 10 mph or lower and outdoor air temperatures are below 90°F for at least 2 consecutive days. The additional dust suppression measures will be incorporated into the dust control plan.

MM-AQ-2 Prior to any project grading activity, the primary project construction contractor will prepare and implement a worker training program that describes potential health hazards associated with Valley Fever, common symptoms, proper safety procedures to minimize health hazards, and notification procedures if suspected work-related symptoms are identified during construction. The worker training program will identify safety measures to be implemented by construction contractors during construction. Safety measures will include the following:

- Provide HEPA-filtered air-conditioned enclosed cabs on heavy equipment. Train workers on proper use of cabs, such as turning on air conditioning prior to using the equipment.
- Provide communication methods, such as two-way radios, for use by workers in enclosed cabs.
- Provide personal protective equipment, such as half-mask and/or full-mask respirators equipped with particulate filtration, to workers active in dusty work areas.
- Provide separate, clean eating areas with hand-washing facilities for construction workers.
- Clean equipment, vehicles, and other items before they are moved off site to other work locations.
- Provide training for construction workers so they can recognize the symptoms of Valley Fever and promptly report suspected symptoms of work-related Valley Fever to a supervisor.
- Direct workers that exhibit Valley Fever symptoms to immediately seek a medical evaluation.
- Prior to initiating any grading, the construction contractor will provide the County program manager with copies of all educational training material.

d) Would the project result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?

The occurrence and severity of potential odor impacts depends on numerous factors. The nature, frequency, and intensity of the source; the wind speed and direction; and the sensitivity of receiving location all contribute to the intensity of the impact. Although offensive odors seldom cause physical harm, they can be annoying and cause distress among the public and generate citizen complaints.

Odors would be potentially generated from vehicles and equipment exhaust emissions during construction of the project. Potential odors produced during construction would be attributable to concentrations of unburned hydrocarbons from tailpipes of construction equipment and asphalt pavement application. Such odors would disperse rapidly from the project site and generally occur at magnitudes that would not affect substantial numbers of people. Therefore, impacts associated with odors during construction would be **less than significant.**

Land uses and industrial operations associated with odor complaints include agricultural uses, wastewater treatment plants, food-processing plants, chemical plants, composting operations, refineries, landfills, dairies, and fiberglass molding facilities (SJVAPCD 2015). The project would not create any new sources of odor during operation as identified by the SJVPACD. Therefore, project operations would result in an odor impact that would be **less than significant**.

3.4 Biological Resources

		Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
IV.	**BIOLOGICAL RESOURCES** – Would the project:				
a)	Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?	☐	☒	☐	☐
b)	Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?	☐	☐	☐	☒

Setting

Dudek biologists conducted a desktop evaluation of the proposed project site. This evaluation includes review of the following available biological databases: U.S. Fish and Wildlife Service (USFWS), California Natural Diversity Database (CNDDB), and California Native Plant Society. Results of the database searches are presented in Appendix E, Special-Status Species Potential to Occur.

One land cover type—Disturbed—and no natural vegetation communities are present on the proposed project site. Disturbed land cover is consistent with human disturbance such as residential and commercial development. The parcel shows evidence of past clearing and grading, and the vegetation present is consistent with non-native species common in disturbed landscapes such as wild oat (*Avena* spp.), cheeseweed (*Malva parviflora*), and bromes (*Bromus* spp.).

Special-Status Plants: Results of USFWS, CNDDB, and California Native Plant Society searches revealed 16 special-status plant species that have potential to occur or that are known to occur in the proposed project region, which includes the Lathrop, California quadrangle and the surrounding eight U.S. Geological Survey (USGS) 7.5-minute quadrangles (see Appendix E). All special-status plant species were removed from consideration due to lack of suitable habitat within or adjacent to the project site, or due to the site being outside of the species' known geographic or elevation range. The history of disturbance and development on the project site and surrounding areas is not conducive to special-status plant presence.

Special-Status Wildlife: Results of the USFWS, CNDDB, and literature searches revealed 37 special-status wildlife species as present or potentially present in the proposed project region (see Appendix E). Of these, 35 species were removed from consideration due to lack of suitable habitat on or adjacent to the project site, or due to the site being outside of the species' known geographic or elevation range. The following were determined to have some potential to occur on the project site: burrowing owl (*Athene cunicularia*) and loggerhead shrike (*Lanius ludovicianus*).

a) Would the project have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?

The potential for special-status plants species to occur on the proposed project site is low due to the disturbed nature of the parcel and the urban development in the immediate vicinity.

The proposed project involves ground disturbance, which has the potential to impact native and migratory birds should they be present and nesting at the time of construction. Implementation of mitigation measure MM-BIO-1 would ensure that surveys for nesting birds be carried out prior to any proposed project activities that occur during the nesting season, and that impact avoidance and minimization measures are appropriately implemented if any nests are discovered during surveys. Implementation of MM-BIO-1 would ensure that any potential impacts to nesting birds would be **less than significant**.

Impacts to special-status species would be **less than significant with mitigation incorporated**.

Mitigation Measures: The following mitigation measure is provided to reduce the impacts to sensitive or special-status species.

MM-BIO-1 To the extent feasible, the City of Manteca shall schedule vegetation removal activities during the non-breeding season for birds in the region (August 16 through February 14). If vegetation removal must be carried out during the breeding season, a qualified biologist shall conduct a nesting bird survey within 1 week prior to said activities to determine if any birds are nesting on or near the project site (including a 500-foot buffer for raptors). If any active nests are observed during surveys, a suitable avoidance buffer from the nests shall be determined and flagged by a qualified biologist based on species, location, and planned construction activities. Consultation with the California Department of Fish and Wildlife

may be required to determine appropriate buffer distances. These nests shall be avoided until the chicks have fledged and the nests are no longer active, as determined by the qualified biologist.

b) Would the project have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?

The proposed project site has been previously disturbed, is surrounded by urban development, and does not support riparian habitat or other sensitive natural vegetation communities. **No impact** would occur.

c) Would the project have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?

The proposed project site has no state or federally protected wetland according to the National Wetlands Inventory (USFWS 2022). The site has no hydric soils, which are often associated with aquatic features (USDA 2022). **No impact** would occur.

d) Would the project interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?

No wildlife corridors would be affected as the surrounding area to the project is highly urbanized. The site provides nursery habitat for ground-nesting birds. Impacts to species would be **less than significant with mitigation incorporated**. Mitigation measure MM-BIO-01 ensures no impacts to ground-nesting birds.

e) Would the project conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?

The proposed project would not conflict with any local policies or ordinances and would be consistent with provisions of the Manteca City General Plan Conservation and Open Space Element. **No impact** would occur.

f) Would the project conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?

No draft or adopted habitat conservation plans, natural community conservation plans, or other approved local, regional, or state habitat conservation plans exist for the proposed project site. **No impact** would occur.

3.5 Cultural Resources

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
V. CULTURAL RESOURCES – Would the project:				
a) Cause a substantial adverse change in the significance of a historical resource pursuant to Section 15064.5?	☐	☐	☒	☐
b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5?	☐	☒	☐	☐
c) Disturb any human remains, including those interred outside of formal cemeteries?	☐	☒	☐	☐

Setting

A Cultural Resources Inventory Report for the project was prepared by Dudek in April 2023 and is included as Appendix C to this document. A records search of the project site and the surrounding one-mile radius was completed by Central California Information Center (CcaIC) staff on behalf of Dudek in December 2022 which included their collection of mapped prehistoric, historical, and built-environment resources, Department of Parks and Recreation (DPR) Site Records, technical reports, archival resources, and ethnographic references. Additional consulted sources included the National Register of Historic Places (NRHP), California Inventory of Historical Resources (CRHR) and listed Office of Historic Preservation (OHP) Archaeological Determinations of Eligibility, California Points of Historical Interest, California Historical Landmarks, and Caltrans Bridge Survey information. Historic aerial photographs, available from 1957 to 2020, and historic maps, available from 1915 to 2018, were inspected to observe previous development in the Project site. An intensive pedestrian survey was also conducted in January 2023.

a) Would the project cause a substantial adverse change in the significance of a historical resource pursuant to Section 15064.5?

Historic aerial photographs and historic maps display the project area as agricultural land up to the mid-1980s to 1990s with the development of housing surrounding the project site in the early 2000s. From the mid-1990s the project site has remained undeveloped until present day. Based on the records search result, no previously recorded cultural resources intersect the project site, and no historical resources were observed during the pedestrian survey. Therefore, impacts to historical resources would be **less than significant**.

b) Would the project cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5?

No archaeological resources were identified within the project site or immediate vicinity as a result of intensive pedestrian survey and the records search. Dudek also requested a NAHC search of their Sacred

Lands File on December 20, 2022 for the project site which came back negative. No known resources would be impacted by project activities. Based on review of the project's geoarchaeological setting, the area has a low to moderate potential to contain unanticipated cultural resources. However, ground disturbance as part of project construction could nonetheless expose or harm unanticipated archaeological resources. Implementation of MM-CUL-1 includes management recommendations to reduce potential impacts to unanticipated archaeological resources to a less-than-significant level.

Impacts to archaeological resources would be **less than significant with mitigation incorporated**.

Mitigation Measures: The following mitigation measure is provided to reduce the impacts to unanticipated archaeological resources.

MM-CUL-1 All employees should be alerted to the potential to encounter archaeological material. In the event that cultural resources (sites, features, or artifacts) are exposed during work activities for the proposed Project, all ground disturbing work occurring within 100 feet of the find shall immediately stop until a qualified specialist, meeting the Secretary of the Interior's Professional Qualification Standards, can evaluate the significance of the find and determine whether additional study is warranted. Prehistoric archaeological deposits may be indicated by the presence of discolored or dark soil, fire-affected material, concentrations of fragmented or whole freshwater bivalves shell, burned or complete bone, non-local lithic materials, or the characteristic observed to be atypical of the surrounding area. Common prehistoric artifacts may include modified or battered lithic materials; lithic or bone tools that appeared to have been used for chopping, drilling, or grinding; projectile points; fired clay ceramics or non-functional items; and other items. Historic-age deposits are often indicated by the presence of glass bottles and shards, ceramic material, building or domestic refuse, ferrous metal, or old features such as concrete foundations or privies. Depending upon the significance of the find under CEQA (14 CCR 15064.5(f); PRC Section 21082), the archaeologist may simply record the find and allow work to continue. If the discovery proves significant under CEQA, additional work, such as preparation of an archaeological treatment plan, testing, or data recovery may be warranted.

c) Would the project disturb any human remains, including those interred outside of formal cemeteries?

Similar to the discussion above, ground-disturbing activities as part of project construction could potentially uncover or disturb unanticipated human remains. Implementation of MM-CUL-1 includes management recommendations to reduce impacts to human remains to a less-than-significant level.

Impacts to human remains would be **less than significant with mitigation incorporated**.

Mitigation Measures: The following mitigation measure is provided to reduce the impacts to unanticipated human remains.

MM-CUL-2 In accordance with Section 7050.5 of the California Health and Safety Code, if human remains are found, the County Coroner shall be immediately notified of the discovery. No further excavation or disturbance of the site or any nearby area reasonably suspected to overlie adjacent remains shall occur until the County Coroner has determined, within 2 working days of notification of the discovery, the appropriate treatment and disposition of the human

remains. If the County Coroner determines that the remains are, or are believed to be, Native American, he or she shall notify the NAHC in Sacramento within 24 hours. In accordance with California Public Resources Code, Section 5097.98, the NAHC must immediately notify those persons it believes to be the most likely descendant from the deceased Native American. The designated Native American representative would then determine, in consultation with the property owner, the disposition of the human remains.

3.6 Energy

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
VI. Energy – Would the project:				
a) Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?	☐	☐	☒	☐
b) Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?	☐	☐	☒	☐

a) Would the project result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?

Construction

Electricity. Temporary electric power for as-necessary lighting and electronic equipment would be provided by Pacific Gas and Electric (PG&E). The amount of electricity used during construction would be minimal because typical demand would stem from electric-powered hand tools. The electricity used for construction activities would be temporary and minimal; therefore, project construction would not result in wasteful, inefficient, or unnecessary consumption of electricity. Impacts would be **less than significant.**

Natural Gas. Natural gas is not anticipated to be required during project construction. Fuels used for construction equipment would primarily consist of diesel and gasoline, which are discussed under the subsection "Petroleum." Any minor amounts of natural gas that may be consumed as a result of project construction would be temporary and negligible and would not have an adverse effect; therefore, project construction would not result in wasteful, inefficient, or unnecessary consumption of natural gas. Impacts would be **less than significant.**

Petroleum. Petroleum would be consumed throughout construction. Fuel consumed by construction equipment would be the primary energy resource expended over the course of construction. Transportation of construction materials and construction workers would also result in petroleum consumption. Heavy-duty construction equipment, vendor trucks, and haul trucks would use diesel fuel. Construction workers would likely travel to and from the project area in gasoline-powered vehicles. Construction is expected to

take approximately 13 months. Once construction activities cease, petroleum use from off-road equipment and transportation vehicles would end. Because of the short-term nature of construction and relatively small scale of the project, petroleum use would be minimal. Impacts would be **less than significant.**

Operation

Electricity. The operation of the project buildout would require electricity for multiple purposes, including cooling, lighting, appliances, and various equipment. Additionally, the supply, conveyance, treatment, and distribution of water would indirectly result in electricity usage. Electricity consumption associated with project operation is based on the CalEEMod outputs presented in Appendix A.

CalEEMod default values for energy consumption for each land use were applied for the project analysis. The energy use from nonresidential land uses is calculated in CalEEMod based on the California Commercial End-Use Survey database. Energy use in buildings (both natural gas and electricity) is divided by the program into end use categories subject to Title 24 requirements (end uses associated with the building envelope, such as the HVAC system, water heating system, and integrated lighting) and those not subject to Title 24 requirements (such as appliances, electronics, and miscellaneous "plug-in" uses).

Title 24 of the California Code of Regulations serves to enhance and regulate California's building standards. The most recent amendments to Title 24, Part 6, referred to as the 2022 standards, became effective on January 1, 2023. According to these estimations, the project would consume approximately 463,707 kilowatt-hours (kWh) per year during operation (Appendix A). The nonresidential electricity demand in 2021 was 3,842,679,539 kWh (3,483 gigawatt-hours) for San Joaquin County (CEC 2022a). As such, the project would have a negligible impact on demand for San Joaquin County and PG&E. Impacts would be less than significant.

Natural Gas. Project operation would require natural gas for various purposes, including water heating and natural gas appliances. Natural gas consumption associated with operation is based on the CalEEMod outputs in Appendix A.

CalEEMod default values for energy consumption for each land use were applied for the project analysis. According to these estimations, the project would consume approximately 909,762 kilo-British thermal units of natural gas per year. The nonresidential natural gas consumption in 2021 was 9,611,900,095 kilo-British thermal units for San Joaquin County (CEC 2022b). As such, the project would have a negligible impact on demand for natural gas for San Joaquin County. Impacts would be **less than significant.**

Petroleum. Petroleum fuel consumption associated with motor vehicles traveling to and from the project site is a function of the VMT related to project operation. As shown in Appendix A and as discussed in Section 3.3, Air Quality, and Section 3.8, Greenhouse Gas Emissions, the annual net new VMT attributable to the project is expected to be 8,201,447 VMT. According to CARB, the estimated annual VMT in 2024 in San Joaquin County is 7,448,518,703 (CARB 2022). As such, the project would have a negligible impact on demand for petroleum for San Joaquin County.

Statewide emission reduction measures will also reduce greenhouse gas (GHG) emissions over the life of the project. CARB-adopted amendments to the Pavley regulations include measures aimed at reducing GHG emissions associated with transportation. These amendments are part of California's commitment to a nationwide program to reduce new passenger vehicle GHGs from 2012 through 2016. Pavley regulations reduced GHG emissions from California passenger vehicles by about 22% in 2012 and by

about 30% in 2016, while improving fuel efficiency and reducing motorists' costs. Additionally, CARB has adopted a new approach to passenger vehicles (cars and light trucks) by combining the control of smog-causing pollutants and GHG emissions into a single coordinated package of standards. The new approach also includes efforts to support and accelerate the numbers of plug-in hybrids and zero-emission vehicles in California (CARB 2017). As such, vehicle trips associated with the project are expected to use less petroleum over time due to advances in fuel economy. Therefore, impacts to petroleum during operation would be **less than significant**.

b) Would the project conflict with or obstruct a state or local plan for renewable energy or energy efficiency?

The project would be subject to and would comply with, at a minimum, the 2022 California Building Code (CBC) (24 CCR Part 6). The project would not conflict with existing energy standards and regulations and **impacts would be less than significant**.

Construction

The electricity and natural gas used for construction of the project would be temporary and would have a negligible contribution to the project's overall energy consumption. Construction is anticipated to consume gasoline and diesel. This would be a fraction of petroleum that would be consumed in California and countywide over the course of the construction period. Therefore, construction would have a less-than-significant impact with regards to regional energy supplies.

Operation

As discussed under the previous thresholds, the project would result in an increased demand for electricity, natural gas, and petroleum. Design features would reduce the project's energy consumption by what is required by the 2022 CBC standards. The efficiency standards apply to new construction of both residential and nonresidential buildings and regulate energy consumed for heating, cooling, ventilation, water heating, and lighting.

In addition, Pavley regulations reduced GHG emissions from California passenger vehicles by about 22% in 2012 and by about 30% in 2016, all while improving fuel efficiency. By 2025, when the Advanced Clean Cars rules are fully implemented, one in seven new cars sold in California (1.4 million) will be non-polluting or nearly so, including plug-in hybrids, fully electric battery-powered cars, and hydrogen-powered fuel cell vehicles (CARB 2012). Meanwhile, gasoline- and diesel-powered passenger vehicles would grow ever cleaner and more efficient. A variety of new technologies, from direct fuel injection to lower rolling resistance tires, will also cut pollution and create more energy-efficient vehicles (CARB 2012). As such, petroleum usage associated with operation of the project is anticipated to decrease over time due to a reduction in VMT in the region and advances in fuel economy. Therefore, impacts related to regional energy supplies and capacity during project operation would be less than significant.

3.7 Geology and Soils

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
VII. GEOLOGY AND SOILS – Would the project:				
a) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:				
i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.	☐	☐	☒	☐
ii) Strong seismic ground shaking?	☐	☐	☒	☐
iii) Seismic-related ground failure, including liquefaction?	☐	☐	☒	☐
iv) Landslides?	☐	☐	☐	☒
b) Result in substantial soil erosion or the loss of topsoil?	☐	☐	☒	☐
c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?	☐	☐	☒	☐
d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?	☐	☐	☒	☐
e) Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?	☐	☐	☐	☒
f) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	☐	☒	☐	☐

a) Would the project directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:

i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.

Fault rupture typically occurs along what are known as Holocene-active faults, which are faults where evidence demonstrates displacement has occurred within the last 11,700 years. According to mapping compiled by the USGS, there are no Holocene-active faults that transect through or even near the site (CTE 2022). The nearest Holocene-active fault to the site, the Greenville fault, is approximately 25 miles southwest of the site (CTE 2022). The Great Valley fault is the next nearest fault at approximately 14 miles southwest; however, it is not considered Holocene-active. Therefore, development of the proposed project would not be susceptible to ground displacement due to surface fault rupture. Furthermore, development of the project would not exacerbate existing conditions that could increase the likelihood of surface fault rupture by stressors on faults. Therefore, the proposed action would not expose people to increased risks as a result of fault rupture, and the potential impact would be **less than significant**.

ii) Strong seismic ground shaking?

The project site is located in a moderately seismically active region where numerous Holocene-active faults capable of producing substantive ground shaking during a seismic event are located between 15 and 38 miles from the project site (CTE 2022). The severity of ground shaking is dependent on a number of different factors including distance to the causative fault, magnitude of the event, duration of shaking, and the geotechnical characteristics of the underlying materials. The closest fault to the project site is the Great Valley fault, Segment 7, approximately 14.9 miles southwest of the site, and the nearest Holocene-active fault is the Greenville fault, approximately 25 miles southwest of the site (CTE 2022). Other Holocene-active faults considered capable of causing ground shaking at the project site include the Mount Diablo Thrust, Calaveras, Green Valley, West Napa, Greenville, and Rodgers-Creek faults. Ground shaking may affect areas hundreds of miles distant from an earthquake's epicenter.

The proposed project would be required to comply with the most current CBC, which includes requirements to ensure that new development is designed to include seismic safety measures. The 2022 CBC[5] design parameters are specifically tailored to minimize the risk of structure failure due to seismic hazards and include a requirement for a standard, project-specific geotechnical (also known as a soils investigation) report, as part of the building permit process (CBC Chapter 18 and 18A). A preliminary project-specific geotechnical report prepared for the project site determined that ground shaking due to an earthquake was a primary geologic hazard at the site (CTE 2022). However, the proposed project is located relatively distant from the regions Holocene-active faults such that the degree of ground shaking would be relatively low (CTE 2022). Nonetheless, in accordance with the CBC, a final design level geotechnical report would be required that provides specific recommendations related to soils and seismic engineering for the proposed improvements, including recommendations for remedial grading and foundation design, thus minimizing the potential for structural distress as a result of seismically induced ground shaking.

[5] The CBC is updated tri-annually; the current version is the 2022 CBC which became effective on January 1, 2023.

Therefore, the project would be designed consistent with applicable CBC regulations, with respect to seismic engineering and would therefore be considered seismically safe. As a result, development of the proposed project would not directly or indirectly cause or exacerbate adverse effects involving strong seismic ground shaking. Impacts would be **less than significant.**

iii) Seismic-related ground failure, including liquefaction?

Liquefaction is a geotechnical hazard that occurs when loose, unconsolidated, saturated soils are subjected to ground shaking, causing the pore pressure to exceed frictional forces resulting in the soil units behaving more like a liquid than a solid. Liquefaction hazards are generally considered to be highest in susceptible soils within 50 feet of the ground surface. If susceptible soils are present, liquefaction can cause substantive damage. Mapping compiled by the California Geological Survey indicates that the project site is not located within an area considered susceptible to liquefaction hazards in accordance with the Seismic Hazards Zonation Program (CalOES 2022). According to data reviewed for the geotechnical investigation for the project site, groundwater depths in the vicinity of the site may range from between 15 to 40 feet below ground surface (CTE 2022). However, considering the presence of medium-dense silty and clayey sands observed at the project site, combined with an absence of observed shallow groundwater and relatively low intensity of anticipated ground shaking, the potential for large settlements due to liquefaction was determined to be low (CTE 2022).

However, as noted above, the proposed project would be required to adhere to the most current version of the CBC, which includes requirements for addressing liquefaction hazards. The potential for liquefaction hazards, if present, can be addressed either through treatment of liquefiable layers or through foundation design in accordance with CBC and applicable ASCE 7 (Minimum Design Loads and Associated criteria for Buildings and Other Structures) standards. All improvements associated with the proposed project would be required to comply with the applicable version of the CBC, which includes requirements to ensure that new development would not cause or exacerbate geological and soil hazards, including liquefaction, lateral spreading (related to liquefaction), and dynamic settlement. These requirements include incorporation of recommendations from a final design-level, project-specific geotechnical report, which would evaluate the potential for liquefaction and provide recommendations to incorporate design measures, such as site preparations and foundation design measures, to minimize the potential for structural damage caused by seismic-related ground failure such as liquefaction. As such, development of the proposed project would not directly or indirectly cause or exacerbate adverse effects involving seismic-related ground failure, including liquefaction. Therefore, impacts would be **less than significant**.

a) Landslides?

The project site is relatively level and not located within an identified landslide hazard zone (CTE 2022). The areas surrounding the site are also relatively level such that the potential for landslides, induced by seismic activity or not, is considered remote. Therefore, there would be **no impact** related to landslides.

b) Would the project result in substantial soil erosion or the loss of topsoil?

Implementation of the proposed project would include earthwork activities that could expose soils to the effects of wind and water that can result in erosion and loss of topsoil. Construction activities would be required to implement an erosion and sediment control plan in accordance with the National Pollutant Discharge Elimination System (NPDES) Construction General Permit (discussed in more detail in

Section 3.10, Hydrology and Water Quality) to reduce the amount of erosion at the construction site from stormwater runoff. Adherence to the Construction General Permit would require preparation and implementation of a stormwater pollution prevention plan (SWPPP) which will include best management practices for erosion control. Implementation of these erosion control requirements would be effective in minimizing the potential for erosion and loss of topsoil.

Once construction is completed, developed portions of the project site would be occupied by pavement and landscaping with drainage features consistent with San Francisco Stormwater Management Requirements and Design Guidelines (discussed in greater detail in Section 3.10, Hydrology and Water Quality), which would serve to reduce soil erosion from stormwater during operations. Therefore, with compliance with stormwater management requirements during construction activities, and with appropriate project design, impacts related to soil erosion would be ***less than significant*** during construction and operation of the project.

c) ***Would the project be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?***

As noted above, the project site is relatively level and not located near any substantive slopes that could be susceptible to landslides on or off site. Relatedly, lateral spreading, a hazard where liquefiable materials shift towards an open face, are not considered a geotechnical hazard at the site because of the relatively flat topography (CTE 2022). The project site is located in an area of recorded subsidence, largely due to groundwater pumping and lowering of groundwater levels from drought conditions. However, the project would not include any direct pumping of groundwater beneath the site that would cause or exacerbate subsidence. Water for the project would be supplied by the City, which receives its water supply from the South San Joaquin Irrigation District (SSJID). SSJID derives its water supply from three sources: surface water diverted from the Stanislaus River at Goodwin Dam, groundwater pumped by the SSJID and private landowners, and irrigation return flows from a neighboring water district (SSJID 2021). However, surface water from the Stanislaus River provides the majority of the water supply for the City of Manteca as part of the senior pre-1914 appropriative water rights, known as the South County Water Supply Project (SCWSP). As a result, the water demands for the project would primarily be met with surface water and would have a negligible effect on groundwater levels that could cause subsidence.

Liquefaction hazards are discussed above and even though the potential for liquefaction was considered low from the geotechnical investigation, adherence to applicable building code requirements would reduce impacts to less-than-significant levels. Furthermore, development of the proposed project would not directly or indirectly cause or exacerbate any adverse effects involving liquefaction hazards.

The proposed project would be required to comply with the most current CBC, which includes requirements to ensure that new development would not cause or exacerbate geological and soil hazards, including unstable soils and collapsible soils (e.g., by ensuring that underlying materials can adequately support the loadings (i.e., weight) of new structures). These requirements include incorporation of recommendations from a final design-level, project-specific geotechnical report, which would include recommendations for grading, foundation design, and retaining walls, if warranted. Adherence to building code requirements would also ensure that all proposed improvements associated with the project are evaluated for potential unstable soils and that recommendations for site preparations (e.g., soil compaction) and/or building foundation designs to minimize the potential for settlement are incorporated into project design plans. Compliance with these recommendations consistent with building code requirements would minimize the

potential for structural damage associated with potentially unstable soils. Therefore, potential impacts would be **less than significant**.

D) Would the project be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?

Expansive soils, if present, can adversely affect improvements over time through cyclical volumetric changes that occur with changes in moisture that can crack foundations, pathways, and other improvements. However, according to the preliminary geotechnical investigation of the project site, expansive soils were not encountered in the exploratory borings conducted at the site (CTE 2022). As a result, the potential for adverse effects related to expansive soils would be considered **less than significant**.

e) Would the project have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?

The proposed project would connect to the existing wastewater infrastructure for the City and would not require septic tanks or any other alternative waste water disposal system. Therefore, there would be **no impact**.

f) Would the project directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?

Paleontological resources are the remains or traces of plants and animals that are preserved in the Earth's crust, and per the Society of Vertebrate Paleontology guidelines (SVP 2010), are older than written history or older than approximately 5,500 years. They are limited, nonrenewable resources of scientific and educational value and are afforded protection under state laws and regulations.

The proposed project is situated with the central portion of the Great Valley geomorphic province (CGS 2002). This geomorphic province is characterized by an approximately 400-mile-long by 50-mile-wide depositional basin that has received sediments since the Jurassic Period (~160 million years ago) (Cohen et al. 2022). Surficial geological mapping by the USGS (1991) at a 1:250,000 scale indicates the proposed project site is underlain by the late Pleistocene (129,000 to 11,700 years ago; Cohen et al. 2022) Modesto Formation (map unit Qm).

Geotechnical borings conducted for the proposed project encountered the Modesto Formation at all depths, from the surface to 20.5 feet below the ground surface (bgs) (CTE 2022). In general, the sediments consisted of moderately compacted silty sands to an approximate depth of 7 feet bgs, a silt layer from 7 to 12 feet bgs, clay from 12 to 16.5 feet bgs, and clayey sand from 16.5 to 21.5 feet bgs.

A paleontological records search was requested from the University of California Museum of Paleontology to determine if any fossil localities are known from within or nearby the proposed project site. The University of California Museum of Paleontology did not report any fossil localities from within the proposed project site; however, they do have nearby localities (UCMP V2016003, V2016004, and V2016005) from the Modesto Formation. These localities are located approximately 7.5 miles north of the proposed project site and were collected during realignment of California State Route 99. Collected specimens include several isolated bones and jaws of camel (*Camelops*) and bison (*Bison*) from approximately 12 feet bgs (UCMP 2023).

No paleontological resources were identified within the proposed project site as a result of the desktop geological review and paleontological review; however, the Modesto Formation has produced significant paleontological resources in the area. In addition, the Modesto Formation is not considered a unique geological feature. Given the high paleontological sensitivity of the Modesto Formation, there is the potential for paleontological resources to exist below the ground surface. As such, ground-disturbing activities within the Modesto Formation have the potential to damage or destroy paleontological resources that may be present. Such resources could be disturbed by grading and excavation activities associated with the proposed project; however, mitigation measure MM-GEO-1 ensures impacts to paleontological resources would be **less than significant with mitigation incorporated**.

Mitigation Measures: The following mitigation measure is provided to reduce the impacts to paleontological resources.

MM-GEO-1 Prior to commencement of any grading activity on site, the applicant shall retain a qualified paleontologist per the Society of Vertebrate Paleontology (SVP) (2010) guidelines. The paleontologist shall prepare a Paleontological Resources Impact Mitigation Program (PRIMP) for the project. The PRIMP shall be consistent with the SVP guidelines and should outline requirements for pre-construction meeting attendance and worker environmental awareness training; where monitoring is required within the proposed project site based on construction plans and/or geotechnical reports; procedures for adequate paleontological monitoring and discoveries treatment; and paleontological methods (including sediment sampling for microvertebrate fossils), reporting, and collections management. The PRIMP shall also include a statement that any fossil lab or curation costs (if necessary due to fossil recovery) are the responsibility of the project proponent. The qualified paleontologist shall attend the pre-construction meeting, and a qualified paleontological monitor shall be on site during all rough grading and other significant ground-disturbing activities (including augering) in previously undisturbed, fine-grained Pleistocene alluvial deposits. In the event that paleontological resources (e.g., fossils) are unearthed during grading, the paleontological monitor will temporarily halt and/or divert grading activity to allow recovery of paleontological resources. The area of discovery will be roped off with a 50-foot radius buffer. Once documentation and collection of the find is completed, the monitor will remove the rope and allow grading to recommence in the area of the find.

3.8 Greenhouse Gas Emissions

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
VIII. GREENHOUSE GAS EMISSIONS – Would the project:				
a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	☐	☐	☒	☐

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?	☐	☐	☒	☐

Climate change-related impacts are considered significant if implementation of the proposed project would do any of the following:

- Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment.
- Conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases.

The vast majority of individual projects do not generate sufficient GHG emissions to create a project specific impact through a direct influence on climate change; therefore, the issue of climate change typically involves an analysis of whether a project's contribution towards an impact is cumulatively considerable. "Cumulatively considerable" means that the incremental effects of an individual project are significant when viewed in connection with the effects of past projects, other current projects, and probable future projects (CEQA Guidelines, Section 15355).

The SJVAPCD has evaluated different approaches for estimating impacts and summarizing potential GHG emission reduction measures. SJVAPCD staff have concluded that "existing science is inadequate to support quantification of impacts that project specific GHG emissions have on global climatic change" (SJCAPCD 2015). This is readily understood when one considers that global climatic change is the result of the sum total of GHG emissions, both human-made and natural, that occurred in the past, is occurring now, and will occur in the future. The effects of project-specific GHG emissions are cumulative, and unless reduced or mitigated, their incremental contribution to global climatic change could be considered significant.

The Final Draft Guidance for Assessing and Mitigating Air Quality Impacts (SJVAPCD 2015) provides an approach to assessing a project's impacts on GHG emissions by evaluating the project's emissions to the "reduction targets" established in CARB's AB 32 Scoping Plan. For instance, the SJVACD guidance recommends that projects should demonstrate that "project specific GHG emissions would be reduced or mitigated by at least 29%, compared to Business as Usual (BAU), including GHG emission reductions achieved since the 2002-2004 baseline period, consistent with GHG emission reduction targets established in [CARB's] AB 32 Scoping Plan. Projects achieving at least a 29% GHG emission reduction compared to BAU would be determined to have a less than significant individual and cumulative impact for GHG" (SJVAPCD 2015).

Subsequent to the SJVAPCD's approval of the Final Draft Guidance for Assessing and Mitigating Air Quality Impacts (SJVAPCD 2015), the California Supreme Court issued an opinion that affects the conclusions that should/should not be drawn from a GHG emissions analysis that is based on consistency with the AB 32 Scoping Plan. More specifically, in *Center for Biological Diversity v. California Department of Fish and Wildlife*, the court ruled that showing a "project-level reduction" that meets or exceeds the Scoping Plan's overall statewide GHG reduction goal

is not necessarily sufficient to show that the project's GHG impacts will be adequately mitigated: "the Scoping Plan nowhere related that statewide level of reduction effort to the percentage of reduction that would or should be required from individual projects." According to the court, the lead agency cannot simply assume that the overall level of effort required to achieve the statewide goal for emissions reductions will suffice for a specific project.

Given this California Supreme Court decision, reliance on a 29% GHG emissions reduction from projected BAU levels compared to the project's estimated 2020 levels as recommended in the SJVAPCD guidance documents will not be the basis for an impact conclusion in this EIR. Given that SJVAPCD staff concluded that "existing science is inadequate to support quantification of impacts that project specific GHG emissions have on global climatic change," this EIR will instead rely on a qualitative approach for this analysis. Specifically, the analysis relies on an assessment of the proposed project for consistency with the City of Manteca Climate Action Plan (CAP), which is specifically designed to reduce GHG emissions in accordance with the GHG emission reduction targets identified by the State of California in the CARB Scoping Plan. Additionally, a qualitative analysis of the proposed project's consistency with other relevant planning documents and relevant laws is provided herein.

a) Would the project generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?

b) Would the project generate conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?

Construction Emissions

Construction of the project would result in GHG emissions, which are primarily associated with use of off-road construction equipment, on-road vendor trucks, and worker vehicles. As stated above, the SJVAPCD recommends that construction emissions be amortized over a 30-year project lifetime; therefore, the total construction GHG emissions were calculated, amortized over 30 years, and then added to operational GHG emissions.

CalEEMod was used to estimate GHG emissions during construction. Construction of the project is anticipated to last up to 13 months. On-site sources of GHG emissions include off-road equipment and off-site sources include on-road vehicles (vendor trucks and worker vehicles). Table 5 presents construction GHG emissions for the project from on-site and off-site emission sources.

Table 5. Estimated Annual Construction GHG Emissions – Project

Year	CO_2	CH_4	N_2O	CO_2e
	Metric Tons			
2023	168.00	0.01	0.00	168.00
2024	112.00	0.00	0.00	113.00
			Total	**281.00**
			Annualized emissions over 30 years (metric tons per year)	***9.37***

Notes: GHG = greenhouse gas; CO_2 = carbon dioxide; CH_4 = methane; N_2O = nitrous oxide; CO_2e = carbon dioxide equivalent.
See Appendix A for complete results.

As shown in Table 5, the estimated total GHG emissions during construction of the project would be approximately 281 metric tons of carbon dioxide equivalent (MT CO_2e). Estimated project-generated

construction emissions amortized over 30 years would be approximately 9 MT CO_2e per year. As with project-generated construction air quality pollutant emissions, GHG emissions generated during construction of the project would be short-term in nature, lasting only for the duration of the construction period, and would not represent a long-term source of GHG emissions.

Operational Emissions

CalEEMod was used to estimate potential project-generated operational GHG emissions from area sources, energy sources (electricity), mobile sources, off-road equipment, solid waste, and water and wastewater. Emissions from each category are discussed in the following section with respect to the project. Operational year 2024 was assumed as the first year of operation. Table 6 shows the estimated operational emissions from the project.

Table 6. Estimated Annual Operation GHG Emissions – Project

Emissions Source	CO_2	CH_4	N_2O	CO_2e
	Metric Tons per Year			
Area	0.21	0.00	0.00	0.21
Energy	91.20	0.01	0.00	91.70
Mobile	3,323.00	0.27	0.22	3,400.00
Refrigerants	0.00	0.00	0.00	79.20
Waste	7.96	0.80	0.00	27.80
Water	1.65	0.08	0.00	4.34
			Amortized construction emissions	*9.37*
			Total	3,612.62

Notes: GHG = greenhouse gas; CO_2 = carbon dioxide; CH_4 = methane; N_2O = nitrous oxide; CO_2e = carbon dioxide equivalent.
See Appendix A for complete results.

As shown in Table 6, the estimated total GHG emissions during operation of the project would be approximately 3,613 MT CO_2e per year, including amortized construction emissions.

Project Consistency with the Manteca CAP

The project's consistency with relevant policies in the City of Manteca's CAP is shown below in Table 7.

Table 7. Project Consistency with the Manteca CAP

Policy Number	Strategy	Consistency Determination
CD-1	The City shall encourage projects consistent with the development densities allowed by the General Plan and are contiguous to existing development meet compact development criteria.	**Consistent:** The project is consistent with the development densities allowed by the General Plan.
CD-2	The City shall encourage projects that are at or near the maximum densities allowed by the General Plan and zoning designations to achieve more compact development.	**Consistent:** The project is consistent with the development densities allowed by the General Plan.

Table 7. Project Consistency with the Manteca CAP

Policy Number	Strategy	Consistency Determination
POD-3	The City shall require all commercial projects to design parking lots to allow safe and comfortable walking routes between businesses within the development. This can be accomplished using pavement treatments and markings, sidewalks, landscaping, signage, and orientation of the buildings.	**Consistent:** The project is designed to included safe and comfortable walking routes within the parking lot on site.
EV-1	The City shall encourage and support the installation of electric charging facilities funded as a public-private partnership in City-operated parking facilities when grant funding is available.	**Consistent:** The project would include at least seven electric vehicle (EV) charging stations.
ENB-1	The City shall require developers to exceed Title 24 energy efficiency standards by at least 10%. The City recognizes that it may not be feasible for all buildings and structures to exceed Title 24 by this amount because of the form or function of the building. Projects that cannot meet the reduction level may provide solar panels or other non-building-related energy efficiency measures such as exterior lighting or water savings.	**Consistent:** The project meets the intent of this CAP policy and would reduce energy use by 10% compared to Title 24 through use of Energy Star appliances, LED lighting, and/or solar panels on site.
SG-1	The City shall encourage development projects to provide solar power as part of their strategy to reduce greenhouse gas emissions.	**Consistent:** The project meets the intent of this CAP policy and would include solar panels on site.
WC-1	The City shall continue to implement water conservation measures to comply with the Model Water Efficient Landscape requirements that implement the Water Conservation in Landscaping Act of 2006 (Assembly Bill 1881, Laird).	**Consistent:** The project would install low-flow fixtures in the buildings, use water-efficient irrigation, and recycle and reuse water from the car wash.
W-1	The City shall require new multifamily and commercial development projects to provide adequate locations to segregate recyclable materials.	**Consistent:** The project would include waste enclosures on site for refuse, green waste, and recycling.
WW-1	The City shall support the use of recycled water for appropriate uses consistent with State standards when benefits outweigh system costs.	**Consistent:** The project's car wash would recycle and reuse water on site to minimize the use of potable water for car washing.

Source: City of Manteca 2013.

Project Consistency with the San Joaquin Council of Governments' 2018 Regional Transportation Plan and Sustainable Communities Strategy

In addition, the proposed project would not conflict with the implementation of regional transportation-related GHG targets outlined in San Joaquin Council of Governments' (SJCOG) 2018 Regional Transportation Plan and Sustainable Communities Strategy (2018 RTP/SCS). The 2018 RTP/SCS includes the Northwest Airport Way Master Plan in their population and employment projections, and VMT increases associated with buildout of the City of Manteca.

Conclusion

Overall, the proposed project would be consistent with the strategies as described in the City of Manteca CAP and it functions as an implementation project toward achieving the City's CAP. Since the proposed project would not conflict with the Manteca CAP (including consistency with the growth projections generated by the Manteca CAP or SJCOG's RTP/SCS), the proposed project would not generate a significant cumulative impact to GHGs. The proposed project would not generate GHG emissions that would have a significant impact on the environment or conflict with any applicable plans, policies, or regulations. Therefore, impacts related to GHGs are **less than significant**.

3.9 Hazards and Hazardous Materials

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
IX. HAZARDS AND HAZARDOUS MATERIALS – Would the project:				
a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	☐	☐	☒	☐
b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	☐	☐	☒	☐
c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?	☐	☐	☒	☐
d) Be located on a site that is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	☐	☐	☒	☐
e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?	☐	☐	☐	☒
f) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	☐	☐	☒	☐
g) Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?	☐	☐	☒	☐

a) Would the project create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?

The proposed project would require the regular transport of hazardous materials, including gasoline and diesel fuel. As a result, the proposed project could result in potentially adverse impacts to people and the environment as a result of hazardous materials being released into the environment (e.g., operators or motorists could spill gasoline while refueling). However, the proposed project would be required to operate in compliance with all with applicable federal, state, and local requirements that regulate gas stations, which would lessen the potential for these impacts. This would include Section 2540.7 of the California Occupational Safety and Health

Administration Regulations (Gasoline Dispensing and Service Stations) and Chapter 38 of the California Fire Code (Liquefied Petroleum Gases). Additionally, the City's General Plan Safety Element provides several policies and implementation measures (IM) related to hazardous materials (City of Manteca 2016). IM S-1-9 would require that businesses manufacturing, storing, using, or transporting significant quantities of hazardous materials annually identify such materials and their quantities, and IM S-I-10 would require the submittal of such lists to the City and Fire Department. During construction, the storage and handling of hazardous materials would occur in accordance with standard construction best management practices (BMPs) to minimize the potential for spill or release and ensure that any such spill or release would be controlled on site. Standard construction BMPs include storing all hazardous materials inside buildings or under other cover, vehicle specifications for hazardous material transport and disposal, procedures for safe storage, and training requirements for those handling hazardous materials.

Compliance with these regulations, policies, and BMPs would ensure that impacts related to the creation of significant hazards to the public through routine transport, use, and disposal of hazardous materials, or accident conditions involving the release of hazardous materials would be **less than significant**.

b) Would the project create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?

Refer to answer provided in 'a' above.

c) Would the project emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?

The closest school to the project site is George McParland Elementary, which is approximately 0.6 miles southeast of the site. The proposed project would not be within 0.25 miles of a school and would comply with all relevant regulations, policies, and BMPs regarding the handling of hazardous materials, as discussed under 'a' above. Therefore, the project would have a **less-than-significant impact** regarding exposure of schools to hazards or hazardous materials.

d) Would the project be located on a site that is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?

Pursuant to Government Code Section 65962.5, the State of California Hazardous Waste and Substances Site List (also known as the "Cortese List") is a planning document used by state and local agencies and developers to comply with CEQA requirements in providing information about the location of hazardous materials sites. According to the Department of Toxic Substances Control EnviroStor database, the project site does not contain any hazardous materials sites or cleanup sites (DTSC 2023). There are several cleanup sites located near the project, most notably a federal Superfund site located 1.2 miles northwest associated with the former Sharpe Army Depot, which repaired and reconditioned heavy equipment and aircraft until 1976 (DTSC 2023). However, the Sharpe Army Depot site is currently undergoing active cleanup, and the proposed project would not interfere with these efforts. Impacts would be **less than significant**.

e) ***For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?***

There are no airports within the City, and the nearest airport (Stockton Municipal Airport) is located approximately 7 miles north of the project site. The project site is not located within an airport land use plan and is not within 2 miles of a public airport or public use airport. Therefore, the likelihood of exposure to aviation hazards is very low, and there would be **no impact**.

f) ***Would the project impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?***

Access to the project site would be provided by three driveways: one with full access on Airport Way, one with right-in/right-out only access on Lathrop Road, and one with full access on Lathrop Road. Project plans would be submitted to the City's Fire Department for review and approval to ensure that emergency access is sufficient at the site. The proposed project would comply with California Fire Code requirements for emergency access, which would ensure that the project would not impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan. Therefore, the project would have a **less-than-significant impact.**

g) ***Would the project expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?***

The project site consists of flat, undeveloped land lacking trees and vegetation. The project is located near other vacant parcels, such as the parcel to the north across Lathrop Way, but is in an area being increasingly developed with urban uses. The project site is within a Local Responsibility Area not designated as a Very High Fire Hazard Safety Zone by the California Department of Forestry and Fire Protection (CAL FIRE); the closest Very High Fire Hazard Safety Zones are more than 16 miles away south of the City of Tracy (CAL FIRE 2022). Therefore, it is unlikely that the proposed project would expose people or structures to a significant risk of loss, injury or death involving wildland fires, and impacts would be **less than significant.**

3.10 Hydrology and Water Quality

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
X. HYDROLOGY AND WATER QUALITY – Would the project:				
a) Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?	☐	☐	☒	☐
b) Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?	☐	☐	☒	☐

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:				
i) result in substantial erosion or siltation on- or off-site;	☐	☐	☒	☐
ii) substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite;	☐	☐	☒	☐
iii) create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or	☐	☐	☒	☐
iv) impede or redirect flood flows?	☐	☐	☒	☐
d) In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?	☐	☐	☒	☐
e) Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?	☐	☐	☒	☐

a) Would the project violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?

Construction

Project construction would require earth-disturbing activities, including grading, excavation, and temporary stockpiling of soil prior to backfilling, which could expose disturbed areas to rainfall and stormwater runoff that can adversely affect water quality of receiving waters if not managed appropriately. In addition, accidental/incidental spills of construction-related contaminants (e.g., fuels and oils) could occur during grading and construction, thereby degrading water quality. However, all grading and associated earthwork activities would be completed in compliance with the General Construction Activity NPDES Permit (Order No. 2009-0009-DWQ, as amended by Order No. 2010-0014-DWQ, NDPES No. CAS000002) (i.e., Construction General Permit), which requires the construction contractor to prepare and comply with a SWPPP. The SWPPP would include erosion control measures such as covering exposed soil stockpiles, protecting the perimeter of the construction site with sediment barriers, and protecting storm drain inlets. The SWPPP must also include water quality protection measures with respect to incidental spills of petroleum products and hazardous materials, including secondary containment of fluid containers, storing fluid containers indoors during rain events, placing drip pans under equipment when not in use, and designating specific areas for equipment fueling and maintenance with

surrounding spill containment booms. With implementation of erosion and spill control measures stipulated in a project-specific SWPPP, impacts related to water quality and waste discharge requirements associated with project grading and construction would be **less than significant**.

Operations

Once constructed, the proposed project would introduce a substantial increase in the amount of impervious surfaces, would involve bulk transfer of petroleum fuels on site, and would include operation of a car wash, all of which represent potential sources of polluted runoff that can adversely affect receiving waters. Incidental spills of fuels, oils, and grease from vehicles in the parking lot or from operation of fueling activities could adversely impact surface water quality. The project operations would be completed in accordance with the Central Valley Region-wide Municipal Separate Storm Sewer System (MS4) Permit (State Water Resources Control Board Order R5-2016-0040 NPDES No. CAS0085324, adopted June 23, 2016). This permit regulates discharges of stormwater and authorized non-stormwater from MS4s and provides a management strategy for controlling the discharge of pollutants to the maximum extent practicable. In accordance with the requirements of the MS4 Permit, the City has collaborated with the Cities of Lathrop, Lodi, Patterson, and Tracy, as well as with portions of the San Joaquin County to adopt the 2015 Multi-Agency Post-Construction Stormwater Standards Manual (Manual) to assist in complying with the requirements of the MS4 Permit. As part of the project design plans, the proposed project would be required to include stormwater drainage control features that are consistent with the Manual and MS4 Permit requirements. These features would include post-construction drainage control features such as low impact development (LID) measures that promote on-site infiltration such as bioswales, retention/detention basins, and use of landscaping in drainage control. In addition, drainage control features would be consistent with the Best Management Practice Guide for Retail Gasoline Outlets that was prepared by the California Stormwater Quality Task Force and applicable Regional Water Quality Control Board requirements that include post-construction BMPs specific to retail gasoline service station operations. Other regulatory requirements that would minimize potential adverse water quality effects would be compliance with Section 2540.7 of the California Occupational Safety and Health Administration Regulations (Gasoline Dispensing and Service Stations) and Chapter 38 of the California Fire Code (Liquefied Petroleum Gases) which are designed to ensure that unauthorized releases are minimized (see also discussion in Section 3.9 Hazards and Hazardous Materials, above). In addition, the car wash facility would include clarifiers and drainage features to protect water quality. Implementation of these post-construction BMPs would ensure that off-site discharge of stormwater pollutants is minimized, and stormwater quality impacts would be reduced to **less than significant**.

b) Would the project substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?

Water supply for the proposed project would be provided by the City, which obtains its water from the SSJID. The SSJID primarily sources its water through a senior pre-1914 appropriative water rights, known as the SCWSP. As a result, the water demands for the project would primarily be met with surface water and would have a negligible effect on groundwater levels or groundwater supplies. The proposed project would substantially increase the amount of impervious surfaces at the site, which could potentially decrease the areas of the site that currently allow for on-site infiltration. However, as mentioned above, the proposed project would be required to adhere to the City's drainage control requirements and the MS4 Permit. LID drainage control features that comply with the Stormwater Standards Manual would include features that allow for on-site infiltration of collected stormwater runoff to the extent feasible. Therefore, although new impervious surfaces would be introduced at the site, the inclusion of stormwater control features that allow

for on-site infiltration would minimize the amount of runoff discharged off site and continue to permit groundwater recharge such that the potential impact would be considered **less than significant.**

c) Would the project substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:

i) Result in substantial erosion or siltation on- or off-site?

Construction and grading activities associated with development of the proposed project would require temporary disturbance of underlying soils through excavation, soil stockpiling, and/or grading activities that disturb existing vegetation and surface soils. These activities could result in exposure of soil to the effects of wind and water erosion, potentially causing entrainment of sediment and contaminants in the runoff if not managed appropriately. However, because the proposed development would disturb 1 acre or more, the project applicant would be required to prepare and implement a SWPPP in accordance with the NPDES General Construction Permit. The SWPPP would be required to include BMPs that would include erosion control measures such as those listed below, which are illustrative of typical construction measures:

- Excavation and grading activities would be limited to the dry season only (April 15 to October 15), to the extent possible. This would reduce the chance of severe erosion from intense rainfall and surface runoff, as well as the potential for soil saturation in swale areas.
- If excavation does occur during the rainy season, stormwater runoff from the construction area can be regulated through a stormwater management/erosion control plan that may include temporary on-site silt traps and/or basins with multiple discharge points to natural drainages and energy dissipaters. Stockpiles of loose material are generally covered and runoff diverted away from exposed soil material. Sediment basin/traps would be located and operated to minimize the amount of off-site sediment transport. Any trapped sediment would be removed from the basin or trap and placed at a suitable location on site, away from concentrated flows, or removed to an approved disposal site.
- Temporary erosion control measures would be provided until perennial revegetation or landscaping is established and can minimize discharge of sediment into receiving waterways.
- After completion of grading, erosion protection would be provided on all exposed soils either by revegetation or placement of impervious surfaces. Revegetation would be facilitated by mulching, hydroseeding, or other methods and initiated as soon as possible after completion of grading and prior to the onset of the rainy season (by October 15).
- Permanent revegetation/landscaping would emphasize drought-tolerant perennial ground coverings, shrubs, and trees.
- BMPs selected and implemented for a future project would be in place and operational prior to the onset of major earthwork on the site. The construction phase facilities would be maintained regularly and cleared of accumulated sediment as necessary.
- Hazardous materials such as fuels and solvents used on the construction sites would be stored in covered containers and protected from rainfall, runoff, and vandalism. A stockpile of spill cleanup materials would be readily available at all construction sites. Employees shall be trained in spill prevention and cleanup, and individuals should be designated as responsible for prevention and cleanup activities.

Implementation of the required SWPPP in accordance with the NPDES General Construction permit would ensure that the potential for erosion or siltation is reduced to **less than significant.**

Once constructed, the site would be predominantly covered in impervious surfaces with some vegetated landscaping and as such soils would no longer be exposed to the effects of erosion. As a result, the potential impacts related to erosion or siltation during operation would be **less than significant.**

ii) Substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite?

As noted above, the project site is currently largely pervious, and development of the project would substantially increase the amount of impervious surfaces. Increases in impervious surfaces can lead to increases in the rate and amount of surface runoff resulting in potential flooding issues on or off site if drainage control measures are not implemented. However, as discussed above, the proposed project would be required to adhere to the City's drainage control requirements and the MS4 Permit. Adherence to these requirements would include implementation of LID drainage control features that promote on-site infiltration of collected stormwater runoff as well as retention or detention basins that can appropriately manage peak storm flows such that the potential for flooding on or off site is minimized. Therefore, although new impervious surfaces would be introduced at the site, the inclusion of stormwater control consistent with the City's requirements and MS4 Permit requirements would be effective in controlling peak flows such that the potential impact related to flooding would be considered **less than significant.**

iii) Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?

As described above, while the overall drainage pattern would change with the addition of new impervious surfaces, the project would include drainage control features that are consistent with City requirements and the guidance Manual. The City requirements were developed to meet MS4 Permit requirements and address not only water quality but also water quantity requirements to ensure that adverse effects would not occur. The implementation of required LID drainage features would provide on-site infiltration and/or onsite retention/detention of stormwater runoff to ensure that peak stormwater runoff flows do not create adverse effects downstream. Compliance with City drainage control requirements would be effective in reducing post-construction stormwater runoff rates such that runoff water would not exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff. Impacts would be **less than significant.**

iv) Impede or redirect flood flows?

According to data compiled by the Federal Emergency Management Agency, the project site is not located within an identified flood hazard area (FEMA 2022). As a result, construction and operation of the proposed project would not impede or redirect flood flows and the potential impact would be considered **less than significant.**

d) In flood hazard, tsunami, or seiche zones, would the project risk release of pollutants due to project inundation?

As described above, the project site is not located within a flood hazard zone as identified by the Federal Emergency Management Agency (FEMA 2022). The project site is also located well over 60 miles from the ocean and thus is not susceptible to tsunami inundation hazards. There are no enclosed or semi-enclosed bodies of water within the vicinity of the project site such that there would be no risk of seiche wave hazards.

Project operations would involve the transfer and storage of bulk quantities of petroleum fuels. However, the risk of upset or accidental release is discussed in Section 3.9, Hazards and Hazardous Materials, and risks would be minimized with adherence to existing regulatory requirements. Therefore, project construction and operation would not substantively risk release of pollutants due to inundation, and the potential impacts would be considered **less than significant**.

e) Would the project conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?

As discussed above, project construction would be required to adhere to NPDES General Construction Permit requirements that include preparation and implementation of a SWPPP and identified BMPs. Implementation of the SWPPP as well as applicable post-construction BMPs would be consistent with NPDES MS4 requirements in accordance with the Central Valley Regional Water Quality Control Plan (Basin Plan). As a result, the proposed project would not conflict with or obstruct the Basin and impacts would be **less than significant.**

The project site is located within the San Joaquin Valley, Eastern San Joaquin groundwater basin, which is considered by the California Department of Water Resources to be a high priority basin where groundwater levels are declining, and the basin is considered to be in critical overdraft (DWR 2022). However, as discussed above, the water supply needs for the proposed project would be supplied by the City water supply, which supplies its water primarily with surface water from the Stanislaus River. As a result, the proposed project would not conflict with a sustainable groundwater management plan, and the potential impact would be **less than significant.**

3.11 Land Use and Planning

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
XI. LAND USE AND PLANNING – Would the project:				
a) Physically divide an established community?	☐	☐	☐	☒
b) Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?	☐	☐	☐	☒

a) Would the project physically divide an established community?

The project site is currently undeveloped and does not contain any buildings or structures. The proposed project would not divide an established community because there are no established communities on site, and access to nearby roads would not be impaired. Therefore, the proposed project would result in **no impact**.

b) Would the project cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?

The proposed project would be consistent with the Neighborhood Commercial land use designation and zoning. According to the City's General Plan, the Neighborhood Commercial land use designation provides for "locally oriented retail and service uses, offices, restaurants, and service stations, public and quasi-public uses and similar and compatible uses" (City of Manteca 2003). A gas station with a convenience store, restaurants, and a car wash would be compatible with this designation. The City Code does not specify requirements for density or minimum open space for the Neighborhood Commercial Zone but does specify a maximum height of 45 feet and a maximum floor area ratio of 0.6. As currently designed, the project includes buildings with a maximum height of 29 feet and 16,946 square feet of building space on a 134,164-square-foot parcel, which would be a floor area ratio of approximately 0.12.

City Code Table 17.26.02-1 states that "when adjacent to a residential district, all structures shall at a minimum be (set back) 40 feet when a commercial or industrial zoned parcel shares a property line with an adjacent residential district." However, the City can reduce this setback upon finding compliance with performance standards in City Code Chapter 17.58:

- The use, handling, storage, and transportation of hazardous materials shall comply with all applicable state laws, and appropriate information shall be reported to Manteca Fire Department (MFD) as the regulatory authority.
- The maximum sound level generated by the project shall not exceed the levels established in Table 17.58.050-1 (Maximum Permissible Sound Pressure Levels).
- No vibration shall be produced that is transmitted through the ground and is discernible without the aid of instruments, would cause discomfort or annoyance to reasonable persons of normal sensitivity, or would endanger nearby residents.
- Sources of odorous emissions, particulate matter, and air containment standards shall comply with the rules and regulations of the SJVAPCD and the California Health and Safety Code.
- No discharge of any matter shall be permitted at any point into any public sewer, private sewage system, or stream or into the ground, except in accordance with standards approved by the state and county departments of health and local ordinances.

As discussed in the appropriate technical sections of this Initial Study, the proposed project would comply with the above performance standards. There are several standards in Chapter 17.58 that do not apply to the project, such as those related to heat generation or radioactivity,

The project would be consistent with other applicable City Code standards such as those regarding landscaping (Chapter 17.48 of the City Code) and lighting (Chapter 17.50 of the City Code). Accordingly, the project would have no impact regarding potential conflicts with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect.

3.12 Mineral Resources

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
XII. MINERAL RESOURCES – Would the project:				
a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?	☐	☐	☐	☒
b) Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?	☐	☐	☐	☒

a) ***Would the project result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?***

The California Department of Conservation, Division of Mines and Geology has not identified significant mineral resources within the project site. The project site is classified as being within Mineral Resource Zone 1 (MRZ-1), which refers to areas where available geologic information indicates that little likelihood exists for the presence of significant mineral resources (CGS 2012). Therefore, the project would not result in the loss of mineral resources of local or statewide importance, and there would be **no impact**.

b) ***Would the project result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?***

Refer to answer provided in 'a' above.

3.13 Noise

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
XIII. NOISE – Would the project result in:				
a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	☐	☐	☒	☐
b) Generation of excessive groundborne vibration or groundborne noise levels?	☐	☐	☒	☐

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?	☐	☐	☐	☒

Dudek prepared a noise technical memorandum for the proposed project in January 2023, included as Appendix F to this Initial Study. Short-term (e.g., less than 1 hour in duration) sound pressure level measurements were conducted adjacent to several residential land uses in the project vicinity to characterize the existing exterior ambient noise levels at these residences that could be impacted by the project's contribution to on-site noise sources or project-related traffic on area roadways. The results of this report are referenced in the impact analyses below.

a) Would the project result in generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

Construction

A noise analysis was performed with a Microsoft Excel–based noise prediction model emulating and using reference data from the Federal Highway Administration Roadway Construction Noise Model. Input variables consist of the receiver/land use types, the equipment type (e.g., backhoe, crane, truck), the number of equipment pieces, the duty cycle for each piece of equipment (i.e., percentage of each hour the equipment typically works), and the distance from the sensitive noise (Appendix F). Results showed that while the adjacent residences could be exposed to construction noise levels that are noticeable compared to ambient levels, the exposure would be short term, would occur during the less sensitive daytime period, and would cease upon proposed project construction completion. In addition, construction noise levels are predicted to be no more than 54 A-weighted decibels (dBA) equivalent continuous sound level (L_{eq}) within the interior of the closest residences, which should not interfere with conversations or other daytime routine activities for residents. Therefore, construction noise would remain **less than significan**t, and would not be anticipated to result in a nuisance.

Operation

Appendix F includes an analysis of noise emission from simultaneous operation of the total suite of equipment at the facility. Operation noise levels were modeled at each studied receiver from a worst-case scenario with all equipment continuously operating simultaneously, which would not be anticipated to occur under actual operational conditions, but which provides an extremely conservative assessment (i.e., the identified resulting sound levels overestimate what would be likely to occur under representative operating parameters). Results showed that the predicted operational noise level would fall below the applicable nighttime maximum allowable noise limit. As such, the noise from the proposed project operations would

comply with maximum permissible sound pressure levels specified in City Code Section 17.58.50. In each case, project operational noise would be well below the ambient noise level at each of the modeled receivers. Adding the project operational noise level to the ambient noise level at each receiver would result in less than a 1 dBA increase, which would be well below a noticeable change. Therefore, the project as proposed would be expected to achieve compliance with the requirements of the City Code Section 17.58.50 limits, and project operations would not result in an increase over ambient noise levels at the existing nearby residential and commercial uses. Impacts would be **less than significant.**

Traffic Noise

Appendix F includes modeling of traffic noise exposure along Lathrop Road and Airport Way, the roadways to which the project would principally add trips. The four studied traffic scenarios allow the direct determination of project-related traffic noise increases, by comparing "existing" to "existing plus project" and by comparing "cumulative developments" to "cumulative developments plus project." Results determined that operation of the project would involve trip generation resulting in traffic noise level increases on each roadway segment of no more than 0.2 dBA Community Noise Equivalent Level, which would not be discernible to the human ear. Therefore, project would not have a considerable contribution to traffic noise levels that could already exceed recommended levels at vicinity residences. Impacts would be **less than significant.**

b) Would the project result in generation of excessive groundborne vibration or groundborne noise levels?

Construction activity can result in varying degrees of ground vibration at local receptors, depending on the equipment and methods used, distance to the affected structures, and soil type. The California Department of Transportation provides ground vibration levels associated with various types of construction equipment (Caltrans 2020). Using this data, project construction-related vibration impacts were estimated at the closest residence. The closest residence is approximately 35 feet east or south from the project site property line and future construction zone boundary. Project construction-related vibration levels at the residence closest to the project would, in all cases, represent less than 50% of the significance threshold for human annoyance (0.24 peak particle velocity in/sec). The threshold for structural damage to typical residential structures is even higher (0.5 peak particle velocity in/sec). As such, project construction would have no potential to cause structural damage to the closest residences, or to result in annoyance for the occupants of such residences. Impacts would be **less than significant.**

c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?

There are no airports within the City, and the nearest airport (Stockton Municipal Airport) is located approximately 7 miles north of the project site. The project site is not located within the vicinity of a private airstrip, within an airport land use plan, and is not within 2 miles of a public airport or public use airport. Therefore, the likelihood of exposure to excessive aviation noise is very low, and there would be **no impact**.

3.14 Population and Housing

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
XIV. POPULATION AND HOUSING – Would the project:				
a) Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?	☐	☐	☒	☐
b) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?	☐	☐	☐	☒

a) ***Would the project induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?***

The project site is undeveloped and does not include any housing or residents. The closest residences are located adjacent to the eastern and southern boundaries of the proposed project site. The project would include a new convenience store, restaurant, gas station, and car wash that would be staffed by new employees. The number of new employees resulting from the project is speculative at this time but would not be great enough to induce substantial population growth resulting in the need to construct new homes and provide new services for this new population. It is also anticipated that these new positions would be filled by people already residing in the region. The project does not propose any homes or extension of roads or infrastructure. Additionally, the proposed project is consistent with the Neighborhood Commercial land use designation in the General Plan and can be considered planned growth assumed under the General Plan. Therefore, the proposed project would not induce substantial population growth and would result in a **less-than-significant impact**.

b) ***Would the project displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?***

The project site is undeveloped and does not include any housing or residents. No housing or residents would be displaced by the proposed project; therefore, the project would have **no impact** on housing or require construction of new housing.

3.15 Public Services

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
XV. PUBLIC SERVICES – Would the project:				
a) Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for any of the public services:				
Fire protection?	☐	☐	☒	☐
Police protection?	☐	☐	☒	☐
Schools?	☐	☐	☐	☒
Parks?	☐	☐	☐	☒

a) ***Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for any of the public services:***

Fire protection?

The project site is currently under the jurisdiction of the MFD, a full-service fire department that operates out of five facilities strategically located in the City. As a full-service fire department, MFD provides fire protection, emergency medical care, hazardous materials response, and emergency operations oversight. The nearest fire station to the project site is Manteca Fire Station no. 4 located at 1465 Lathrop Road, approximately 0.6 miles east of the project site.

The City receives funds for the provision of public services through development fees, property taxes, and connection and usage fees. Impact fees from new development are collected based upon projected impacts from each development. The adequacy of impact fees is reviewed on an annual basis to ensure that the fee is commensurate with the service. Payment of applicable impact fees by new development, and ongoing revenues that would come from property taxes, sales taxes, and other revenues generated by the proposed project, would fund capital and labor costs associated with fire protection services (City of Manteca 2011). Payment of such fees would ensure that the proposed project would not cause substantial adverse physical impact associated with the provision of new or physically alternated fire facilities. Additionally, the proposed project would not be growth-inducing and therefore would not impact MFD service ratios or response times. The project would be constructed consistent with California Fire Code requirements for emergency access as directed by the MFD's preliminary review. Therefore, the proposed project would result in a **less-than-significant impact**.

Police protection?

The project site is currently under the jurisdiction of the Manteca Police Department, which operates out of its headquarters located at 1001 W. Center Street, approximately 2.15 miles southeast of the project site. As discussed above, the City receives funds for the provision of public services through development fees, property taxes, and connection and usage fees. Payment of applicable fees would fund capital and labor costs associated with police protection services. Additionally, the project would not be growth-inducing and therefore would not impact Manteca Police Department service ratios or response times. No new or physically altered government facilities would be required to serve the proposed project. Therefore, the proposed project would result in a **less-than-significant impact**.

Schools?

All new residential and commercial development in the City is required to pay a developer impact fee to fund school improvement projects. The proposed project does not include any residential uses that would increase the number of school-age children, but it is still required to pay required developer fees to mitigate impacts to school facilities, in accordance with Policy PF-P-33 of the City's General Plan (City of Manteca 2003). Payment of development fees is considered to fully mitigate the impacts of new development on school facilities under Section 65996 of the California Government Code. For this reason, **no impact** on schools would occur.

Parks or other public facilities?

The proposed project does not include any residential uses that would substantially increase demand for parks or public facilities. As discussed previously, the project would not induce substantial population growth. The project would not introduce a new population to the City needing access to parks or other public facilities or services. Therefore, **no impact** on parks other public facilities would occur.

3.16 Recreation

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
XVI. RECREATION				
a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	☐	☐	☐	☒
b) Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?	☐	☐	☐	☒

a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?

The project involves development of a gas station with a car wash, convenience store, retail building, and restaurants to serve existing residents of the City. The operation of these land uses would not induce population growth within the City that would create an increase in use of recreation facilities, such that physical deterioration of the facilities would occur or be accelerated. Therefore, **no impact** to recreational facilities would occur.

b) Does the project include recreational facilities or require the construction or expansion of recreational facilities, which might have an adverse physical effect on the environment?

The proposed project does not include any recreational facilities. The development and operation of the project would not induce substantial population growth that could increase demand for existing park or recreational facilities, such that the construction of new or expansion of existing recreational facilities would be required. Therefore, **no impact** to recreational facilities would occur.

3.17 Transportation

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
XVII. TRANSPORTATION – Would the project:				
a) Conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities?	☐	☐	☒	☐
b) Conflict or be inconsistent with CEQA Guidelines Section 15064.3, subdivision (b)?	☐	☐	☒	☐
c) Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	☐	☒	☐	☐
d) Result in inadequate emergency access?	☐	☐	☒	☐

This section analyzes the potential transportation impacts of the project per the CEQA transportation significance criteria above. The analysis of transportation impacts summarized below is primarily based on the Airport Plaza Transportation Impact Study prepared by Fehr & Peers (October 2022) and included in Appendix D. Notably, this section focuses on the recently adopted VMT metric for determining the significance of transportation impacts based on CEQA Guidelines Section 15064.3(b) and Senate Bill (SB) 743. Pursuant to SB 743, the focus of transportation analysis changed from LOS or vehicle delay to VMT.

Existing Conditions

The project site is located on the southeast corner of the signalized intersection of Airport Way/Lathrop Road. Adjacent to the project site, Airport Way is currently a two-lane (one lane in each direction) divided (with a center

two-way left-turn lane) roadway south of Lathrop Road. Lathrop Road is also a two-lane, divided roadway east of Airport Way. Both Airport Way and Lathrop Road in the project vicinity are designated as four-lane major roadways in the City's Circulation Element (City of Manteca 2003).

All legs of the Airport Way/Lathrop Road intersection have crosswalks with push-button activation. The southeast, northwest, and northeast corners of the intersection feature small, paved areas where pedestrians may wait. However, no Americans with Disability Act (ADA)-compliant ramps are provided, and sidewalks currently do not connect to any of these crosswalks. A sidewalk exists on the east side of Airport Way from the south boundary of the project site to Hastings Drive, and on the south side of Lathrop Road from the project site to London Avenue. There are currently no bicycle facilities along Airport Way or Lathrop Road. Planned bicycle facilities in the City's Active Transportation Plan (ATP) near the project area include Class II buffered bike lanes along Airport Way and Class II bike lanes along Lathrop Road.

Manteca Transit operates fixed-route and Dial-a-Ride bus service with stops throughout the City. The nearest bus stop is on London Avenue at Copeland Way in front of Chadwick Park, an approximately 0.5-mile walk to the east of the project site. This stop serves Manteca Transit Route 3, which provides weekday and Saturday fixed-route service. Route 3 follows a counterclockwise path covering the northwest portion of Manteca, serving schools, parks, and shopping centers along North Main Street, Louise Avenue, Northgate Drive, Crom Street, and Yosemite Avenue. Dial-a-Ride service is provided in the area encompassing most of the built-out area in the Woodbridge neighborhood.

Project Traffic

Since the project site consists of several complimentary uses that could result in internal trip-making, trip generation estimates were prepared using a combination of Trip Generation,11th Edition (ITE 2021) and the Mixed-Use Trip Generation Model (MXD+), which was originally developed for the U.S. Environmental Protection Agency to estimate internal trip-making and external trips made by non-auto travel modes. Because land uses such as gas stations and fast-food restaurants attract pass-by trips, pass-by trips are also considered in project trip generation. Pass-by trips represent drivers already travelling on the street adjacent to the project on (Airport Way and Lathrop Road) that decide to patronize the project site. Therefore, pass-by trips are not generated by the project but are existing vehicles on the roadway facility.

Table 8 presents the estimated AM and PM peak hour vehicle trips created by the proposed project. Along with internal trips estimated by MXD+, these estimates also consider pass-by trips. While the project would generate substantial numbers of entering/exiting trips, more than 62% of those trips would be pass-by based on the nature of the land uses proposed.

Table 8. Project Trip Generation

Land Use Type (ITE Land Use Code)	Units	AM Peak Hour[1]			PM Peak Hour[1]		
		In	Out	Total	In	Out	Total
Convenience Store/Gas Station (945)	16 FPs	128	128	257	147	147	294
Automated Car Wash (948)[2]	1 tunnel	0	0	0	0	0	0
Strip Retail Plaza (822)	5.7 TSF	8	5	14	19	19	38
Fast-Food Restaurant w/ Drive Thru (934)	2.5 TSF	57	55	112	43	40	83
High-Turnover (Sit-Down) Restaurant (932)	4.0 TSF	21	17	38	22	14	36
	Gross Trips	**214**	**206**	**420**	**231**	**220**	**451**

Table 8. Project Trip Generation

Land Use Type (ITE Land Use Code)	Units	AM Peak Hour[1]			PM Peak Hour[1]		
		In	Out	Total	In	Out	Total
Internal Trips[3]		-6	-6	-12	-8	-8	-16
Pass-by Trips[4]		-130	-130	-260	-142	-142	-284
New Vehicle Trips		78	70	148	81	70	151

Source: Appendix D.
Notes: FP = fueling position; TSF = thousand square feet
1 Based on average trip rates in the Trip Generation Manual, 11th Edition (ITE 2021).
2 The car wash is part of the gas station/convenience market and not a standalone use that would draw its own clientele. To the extent it generates any trips, they are already reflected in the trip generation estimates for the gas station/convenience market category.
3 Internalization based on output from MXD+: 2.0% in the AM peak hour, and 3.5% in the PM peak hour.
4 Pass-by trip percentages are based on data from the Trip Generation Manual, 11th Edition (ITE 2021). See discussion above about capping pass-by trips in the existing plus project scenario. In the AM peak hour, the existing plus project scenario results in an estimated 186 total pass-by trips for a total of 222 new trips. In the PM peak hour, an estimated 224 total pass-by trips results in 211 new trips.

Based on the table, the proposed project would generate a total of 420 AM peak hour trips (214 inbound and 206 outbound) and 451 PM peak hour trips (231 inbound and 220 outbound). Of those trips, 272 would be internal and pass-by trips during the AM peak hour, and 300 would be internal and pass-by trips in the PM peak hour. Therefore, the net, or new, trips generated by the project would be 148 AM peak hour trips (78 inbound and 70 outbound) and 151 PM peak hour trips (81 inbound and 70 outbound).

a) Would the project conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?

As discussed below, the project would not conflict with applicable policies in the City's General Plan Circulation Element and ATP. As noted above, as required by SB 743, the focus of transportation impacts has changed from LOS or vehicle delay to VMT. Therefore, inconsistencies related to the City's LOS policies are not required to be addressed in this transportation section. The project's effect on LOS can be found in its Transportation Impact Study, provided in Appendix D.

City of Manteca General Plan Circulation Element

The following relevant circulation policies from the 2023 Circulation Element of the currently adopted City of Manteca General Plan (City of Manteca 2003) were evaluated for consistency with the proposed project.

C-P-4: Streets shall be dedicated, widened, extended, and constructed according to street cross-section diagrams established in the City Standard Plans.

C-P-5: Major circulation improvements shall be completed as abutting lands develop or redevelop, with dedication of right-of-way and construction of improvements, or participation in construction of such improvements, required as a condition of approval.

C-P-6: New development shall pay a fair share of the costs of street and other transportation improvements based on impacts to LOS and other modes in conformance with the goals and policies established in this Circulation Element and the PFF program.

C-P-8: Street improvements will be designed to provide multiple, direct, and convenient routes for all modes.

The proposed project site plan and recommendations in its Transportation Impact Study (Appendix D) are consistent with Policies C-P-4, C-P-5, C-P-6, and C-P-8. The project would dedicate of right-of-way and/or construct roadway improvements as part of project construction and pay its fair share of costs as determined by the City.

C-P-20: The creation or continuance of traffic, bicycle, and pedestrian hazards shall be discouraged in new development, infill development, and redevelopment areas.

C-P-21: In the development of new projects, the City shall give special attention to maintaining/ensuring adequate corner-sight distances appropriate for the speed and type of facility, including intersections of city streets and private access drives and roadways.

C-P-22: The City shall encourage the development of landscape separated sidewalks along roadways (particularly arterials and non-residential streets) when feasible to discourage pedestrian/vehicle conflicts and be consistent with complete streets concepts.

The project would be consistent with C-P-20 and C-P-21. The project would not create any vehicle, bicycle, or pedestrian hazards. The project would maintain adequate corner sight distance at the Airport Way/Lathrop Road intersection in accordance with the Manteca Municipal Code Section 17.54.060. However, the sidewalks proposed in the project site plan are not landscape-separated as discussed in CP-22. Based on the project site plan, adding space between the roadway and sidewalk may create internal project layout concerns and cause discontinuities with the nearby sidewalks, and is therefore considered infeasible.

C-P-24: New development shall provide an adequate number of off-street parking spaces to accommodate the typical parking demands of the type of development on the site. The City may dictate both minimum and maximum amounts of parking; the use of shared parking is encouraged to reduce overall land consumed by parking areas.

C-P-27: Ensure that there is adequate parking for normal commercial activities.

The proposed project would be consistent with C-P-24 and C-P-27. The project site plan depicts 108 parking spaces, which exceeds the 102 parking spaces required by Manteca Municipal Code Section 17.52.050 based on the proposed land uses.

C-P-30: Provide adequate bicycle parking facilities at commercial, business/professional, and light industrial uses.

C-P-32: The City shall strive to provide on-street Class II bike lanes along major collector and arterial streets whenever feasible.

C-P-36: The City shall strive to provide a sidewalk system that serves all members of the community and meets the latest guidelines related to the Americans with Disabilities Act (ADA).

C-P-37: All new sidewalks, walkways, and intersection crosswalks shall be consistent with the requirements of the ADA.

The proposed project would be consistent with C-P-30, C-P-32, C-P-36, and C-P-37. The project site plan depicts 10 bicycle parking spaces, exceeding the 7 parking spaces that would be required based on Manteca Municipal Code Section 17.52.110. The project site plan shows bike lanes along the project frontage on Airport Way and Lathrop Road, as well as sidewalks and curb ramps at the Airport Way/Lathrop Road intersection and at project driveways. As a Condition of Approval, the applicant shall reconfigure the south and east leg crosswalks of the Airport Way/Lathrop Road intersection and add ADA-compliant curb ramps to the southwest, southeast, and northeast quadrants of intersection.

> C-P-50: All roads identified as truck routes shall be designed to accommodate STAA [Surface Transportation Assistance Act] trucks.

The proposed project could be consistent with C-P-50. As the City works with San Joaquin County and surrounding jurisdictions to finalize its truck routes, it will need to ensure designated routes are designed appropriately, and let developers know of truck route designations and design requirements.

> C-P-53: The City shall establish a requirement for a TDM [transportation demand management] program in any business park, industrial or commercial land use that employs more than 50 full time equivalent employees.

The proposed project would be consistent with C-P-53, as the project land uses are projected to employ less than 50 full-time equivalent employees, it does not need to create a TDM program.

City of Manteca Active Transportation Plan

The City's ATP identifies the following planned improvements near the project site:

- Class II (on-street with appropriate signage and pavement markings) buffered bike lane on Airport Way between Roth Road and Daniels Street.
- Class II bike lane along Lathrop Road within Manteca's city boundaries, from west of Airport Way to east of State Route 99.
- Sidewalk along the west side of Airport Way between Roth Road and south of State Route 120.
- Sidewalks on both sides of Lathrop Road from approximately 1,500 feet west of Airport Way to east of London Avenue, including along the project frontage.

The ATP also provides guidance on short-term and long-term bicycle parking. As defined in the ATP, short-term bicycle parking is temporary bicycle parking intended for visitors, typically provided as bike racks. Long-term bicycle parking is intended for employees to protect bicycles for extended periods and are more secure to protect bicycles from theft and weather. A total of seven bicycle parking spaces are required for the proposed site. The project would provide 10 bike racks, a form of short-term bicycle parking. Long-term bicycle parking could be provided for employees in each building.

As discussed above, the project would not conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities, and impacts would be **less than significant**.

b) Would the project conflict or be inconsistent with CEQA Guidelines Section 15064.3, subdivision (b)?

The City of Manteca is in the process of developing guidelines for transportation impact analysis. Therefore, for the purpose of this project, methodology and screening criteria in the City's Draft Transportation Impact Analysis Guidelines (TIA Guidelines) will be applied (City of Manteca 2023). The TIA Guidelines includes a list of land use projects whose transportation VMT impacts are presumed to be less than significant, and therefore may be relieved of performing a complete VMT impact analysis. Consistent with the Technical Advisory on Evaluating Transportation Impacts in CEQA (OPR 2018), the City's TIA Guidelines recommend screening out local serving retail land uses from VMT analysis as explained below.

> **Local-Serving Retail**: Trip lengths may be shortened and VMT reduced by adding "local-serving" retail opportunities that improve destination proximity. The Technical Advisory generally describes retail development including stores less than 50,000 square feet as locally serving. Restaurants may also be screened using this criterion.

As noted above, local-serving retail is one of the uses that can be presumed to have a less-than-significant VMT impact and thus be screened out of VMT analysis. The OPR Technical Advisory notes that new retail development typically redistributes shopping trips rather than creating new trips (OPR 2018). The proposed gas station, car wash, and restaurant uses would qualify as retail uses, and would have a similar effect on travel. Demand for these services is fixed, with customers selecting businesses to patronize based on convenience, quality, and/or offered services. The OPR Technical Advisory further states that "adding retail opportunities into the urban fabric and thereby improving retail destination proximity, local-serving retail development tends to shorten trips and reduce VMT. Thus, lead agencies generally may presume such development creates a less-than-significant transportation impact" (OPR 2018).

The proposed project can be described as a local-serving business that would improve commercial destination proximity. In accordance with the OPR Technical Advisory, the project would satisfy the local-serving retail VMT screening criteria by virtue of the nature and size of the project (commercial use with less than 50,000 square feet of building floor area consisting of a local-serving use). Therefore, the proposed project would not conflict or be inconsistent with CEQA Guidelines Section 15064.3(b), and impacts would be **less than significant**.

c) Would the project substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?

Access to the project would be provided by three driveways: one on Airport Way and two on Lathrop Road. The driveway on Airport Way (Driveway 1) would primarily serve traffic associated with the retail and restaurant pads. The western driveway on Lathrop Road (Driveway 2) would primarily serve traffic associated with the gas station, convenience store, and car wash, while the eastern driveway on Lathrop Road (Driveway 3) would primarily serve the drive-through fast-food restaurant. All turning movements were assumed for analysis purposes to be permitted at the driveway on Airport Way and the eastern driveway on Lathrop Road, while the western driveway on Lathrop Road would be right-in/right-out only.

Driveway Access

Left-turn ingress movements into Driveways 1 and 3 would have maximum queues of four vehicles. Storage for those movements can be provided by the median lane or existing two-way left-turn lanes on both

roadways. The northbound left-turn lane on Airport Way approaching Lathrop Road is striped for approximately 335 feet of storage. Left-turning project vehicles at Driveways 1 and 3 may create hazardous conditions for vehicles in the northbound and westbound left turn storage lanes at the intersection. To accommodate southbound left-turns into Driveway 1, it is recommended that the northbound left-turn lane length be reduced to 200 feet, with the 135 feet of distance that is modified becoming a southbound left-turn lane into Driveway 1 (i.e., back-to-back left turn lanes).

Mitigation Measure: The following mitigation measure is provided to reduce the impacts related to hazards due to a geometric design feature.

MM-TR-1 Prior to receipt of the Certificate of Occupancy, the project applicant shall modify, at their expense, the medians of Airport Way and Lathrop Road along the project frontages to enable all movements to be permitted at Driveways 1 and 3; and movements at Driveway 2 to be restricted to right-turn in/out movements only. To accommodate southbound left-turns into Driveway 1, it is recommended that the northbound left-turn lane length be reduced to 200 feet, with the 135 feet of distance that is modified becoming a southbound left-turn lane into Driveway 1 (i.e., back-to-back left turn lanes). The median modifications shall be designed per City standards and approved by the City's Engineering Department prior to modifications.

However, under cumulative conditions, significant background traffic growth is expected, and intersection improvements are planned. At Driveway 1, all movements should be permitted until such time that the ultimate improvements are constructed along Airport Way. Those improvements would expand the intersection, thereby resulting in dual northbound left-turns with storage extending beyond Driveway 1. Therefore, with ultimate widening, movements at Driveway 1 would eventually need to be restricted to right turns only.

Similarly, at Driveway 3, all movements should be permitted until such time that the ultimate improvements are constructed along Lathrop Road. With ultimate widening of Lathrop Road, movements at all driveways would need to be restricted to right turns only.

On-Site Circulation

At Driveway 1, perpendicular parking begins on each side of this street about 35 feet within the site. In addition to queuing caused by vehicles waiting to exit onto Airport Way, additional queuing could occur as vehicles wait in the driveway to enter/exit parking stalls. This may be a potentially hazardous condition at Driveway 1. To alleviate this, the City will require removal of the most western three spaces on north side of the driveway, and the four spaces on the south side of the driveway. This will provide storage for approximately three outbound vehicles. While less than the expected 100-foot queue, this would significantly lessen the chances of inbound traffic being blocked and spilling onto Airport Way. This will be incorporated into the site plan design prior to the City's approval.

At Driveway 2, although the available storage is 25 feet less than the maximum queue, no modifications to this driveway are recommended. This is because of the driveway's considerable width and no nearby parking drive aisles from which queues could occur. There is ample space within the project site for inbound traffic to navigate around waiting outbound vehicles.

At Driveway 3, to minimize a potentially hazardous driveway condition, stop signs are recommended to be placed on the northbound and eastbound approaches to the first internal intersection near this driveway (with inbound movements provided priority right-of-way). This will ensure that if a queue of four vehicles arrives, the fourth vehicle will be waiting at the stop sign versus blocking the intersection.

Mitigation Measure: The following mitigation measure is provided to reduce the impact related to Driveway 3:

MM-TR-2 Prior to site plan approval by the City, the project applicant shall incorporate the following modification at Driveway 3 for the final design of the project site:

Driveway 3. Install stop signs on the northbound and eastbound approaches to the first internal intersection near this driveway (with inbound movements provided priority right-of-way). This will ensure that if a queue of four vehicles arrives, the fourth vehicle will be waiting at the stop sign versus blocking the intersection.

With the implementation of mitigation measures MM-TR-1 and MM-TR-2, no hazardous design features or incompatible uses would be part of the project. Therefore, impacts associated with hazardous design features or incompatible uses in conjunction with the implementation of improvements would be **less than significant with mitigated measures incorporated**.

d) Would the project result in inadequate emergency access?

All areas of the project site would be accessible to emergency responders during construction and operation. Access to the project site would be provided via Driveway 1 on Airport Way and two driveways on Lathrop Road. There would be adequate access to the project site and to all proposed buildings via internal roadway, including access for emergency vehicles. The proposed site plan, including the new on-site roadway and proposed parking lot, would be designed per the City's standard width, clearance, and turning radius requirements, and would be reviewed and approved by the MFD during plan check review. Therefore, impacts associated with inadequate emergency access would be **less than significant**.

3.18 Tribal Cultural Resources

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
XVIII. TRIBAL CULTURAL RESOURCES				
Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code Section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:				
a) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code Section 5020.1(k), or	☐	☒	☐	☐

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
b) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1? In applying the criteria set forth in subdivision (c) of Public Resources Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.	☐	☒	☐	☐

Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code Section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:

a) ***Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code Section 5020.1(k)?***

b) ***A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in submission (c) of Public Resources Code Section 5024.1? In applying the criteria set forth in division (c) of Public Resource Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.***

Dudek requested a NAHC search of their Sacred Lands File for the project site and results for this search were provided by the NAHC on December 16, 2022. Results were negative. A list of traditionally culturally affiliated Native American tribal representatives who may have additional information related to cultural resources in the area was provided as part of this search. The City sent out notification letters to these tribes pursuant to Public Resources Code §21080.3.1(b) on February 13, 2023. Out of 12 tribes, no tribes requested consultation or provided additional information regarding potential impacts to tribal cultural resources.

Nonetheless, as discussed under Section 3.5, Cultural Resources, ground-disturbing activities as part of project construction may have the potential to unearth or disturb tribal cultural resources, artifacts, or human remains. MM-CUL-1 and MM-CUL-2 would reduce these impacts to less than significant.

Impacts to tribal cultural resources would be **less than significant with mitigation incorporated**.

Mitigation Measures: See MM-CUL-1 and MM-CUL-2.

3.19 Utilities and Service Systems

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
XIX. UTILITIES AND SERVICE SYSTEMS – Would the project:				
a) Require or result in the relocation or construction of new or expanded water, waste water treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?	☐	☐	☒	☐
b) Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry, and multiple dry years?	☐	☐	☒	☐
c) Result in a determination by the waste water treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?	☐	☐	☒	☐
d) Generate solid waste in excess of state or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?	☐	☐	☒	☐
e) Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?	☐	☐	☒	☐

a) Would the project require or result in the relocation or construction of new or expanded water, waste water treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?

The proposed project would be served by existing City water infrastructure, wastewater collection and treatment facilities, stormwater drainage, electric power, and telecommunications infrastructure near the project site.

Water for the project would be provided by the City, which obtains its water from the SSJID. The SSJID primarily sources its water through a senior pre-1914 appropriative water rights on the Stanislas River, known as the SCWSP. As a result, the water demands for the project would primarily be met with surface water. According to the 2020 Urban Water Management Plan for the SSJID, the agency can meet projected water demands under normal water years out to the year 2045 (SSJID 2021). However, under a single dry year, the reliability of SSJID's surface water supply is estimated to be reduced, and demand will exceed

available supply by amounts ranging up to 9,102 acre-feet per year in 2040 (SSJID 2021). The difference is anticipated to be met individually by the SCWSP agencies using groundwater supplies, transfers, and/or other alternate supplies. During multiple dry years, the sufficiency of SSJID's water supply to meet the projected SCWSP demand depends on the drought year. During the first, second, and fifth year of drought, SSJID is projected to have sufficient supply (SSJID 2021). However, during the third and fourth year, the projected SCWSP water demand is estimated to exceed total supply. The largest difference is approximately 9,102 acre-feet per year in 2040, although, again, the shortfall would be met individually by groundwater supplies, transfers, and other alternate supplies. In addition, the Urban Water Management Plan includes contingency plans and a description of planned projects and implementation programs to improve demand management. Based on estimates produced from the CalEEMod as discussed in Section 3.3, Air Quality, the proposed project is estimated to have a water demand of 2,968,257 gallons per year or 9.1 acre-feet per year. As described above, the Urban Water Management Plan states that the SSJID water supply portfolio is capable of meeting water demand through the year 2045. The estimated water demand from the proposed project would be considered as part of planned growth for the City and within the capabilities of the available water supply. The proposed project would tie into existing water infrastructure near the site and would implement water efficient measures consistent with City requirements such that it would not contribute to the need for new or expanded water facilities. Therefore, impacts related to water facilities would be **less than significant**.

Wastewater generated at the site would be delivered to the City's Wastewater Quality Control Facility (WQCF). The treatment facility handles municipal sewage from the City, portions of Lathrop, and Raymus Village. The WQCF currently delivers treated recycled and reclaimed water for irrigation, construction dust control application, and discharge to the San Joaquin River. The WQCF current treats up to approximately 6.5 million gallons per day of water and is currently permitted to treat up to 9.87 million gallons per day. The WQCF is currently undergoing expansions to the solids handling streams to provide increased capacity to meet permitted requirements and new state regulations. As noted above, data from CalEEmod estimates a total of 2,968,257 gallons per year or 0.008 gallons per day for project site usage. As such, wastewater generated by the proposed project would not substantially increase the existing wastewater flow to the City's wastewater system. Therefore, the treatment plant would have adequate capacity to serve the proposed project, and impacts related to wastewater facilities would be **less than significant.**

The project site is currently largely unpaved and covered with pervious surface. The proposed project would create new impervious surfaces and require installation of drainage control features in accordance with City requirements, which include conformance with the Multi-Agency Stormwater Control Manual that was developed to meet NPDES MS4 permit requirements. The project would implement and install stormwater management systems that would retain runoff on site and limit discharges off site. Any stormwater not captured by these stormwater management systems would flow into the City's storm drain system. As described in Section 3.10, Hydrology and Water Quality, the proposed project would not result in a substantial increase of surface runoff that would exceed the current capacity of the City's stormwater system. There would be no need for new or expanded stormwater drainage infrastructure, and impacts would be **less than significant.**

Electricity services for the proposed project would be provided by PG&E with existing transmission infrastructure in the vicinity of the project site that would not require any new or expanded transmission services. As discussed in Section 3.6, Energy, the proposed project would comply with the most current CBC, and energy standards at the time of building construction. The project would not result in wasteful,

inefficient, or unnecessary consumption of energy resources during construction or operation. Therefore, no new or expanded facilities would need to be built and impacts would be **less than significant**.

Telecommunications usage would be minimal and would not require the construction of new facilities or expansion of existing facilities. Therefore, this impact would be **less than significant**.

b) Would the project have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?

SSJID would provide water service. As discussed above in item 'a,' project development would not exceed current available water supply, and SSJID is projected to meet future demands under normal water years until 2045. In both single dry and multiple dry years, however, SSJID is projected to experience shortfalls in water supply by as much as 9,102 acre-feet per year (SSJID 2021). As described above, the Urban Water Management Plan states that the water supply portfolio has flexibility and management tools including use of groundwater, transfers, and alternative sources that make up these projected differences. In addition, current and future expansion projects and demand management measures are being implemented to improve water supply reliability. As such, the City would have sufficient water supplies to serve the proposed project during normal, dry, and multiple dry years. For these reasons, impacts associated with water supply for the project would be **less than significant**.

c) Would the project result in a determination by the waste water treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?

See discussion under item 'a' above; project implementation would not exceed the capacity of the WQCF to treat wastewater flows from the project site. Furthermore, the proposed project would incorporate recycling of water used for the car wash facility and water-efficient fixtures throughout, as required under Title 24 of the California Code of Regulations. Compliance with these regulations would further reduce wastewater flows to the WQCF. Project-generated wastewater would not exceed capacity of the treatment plant, and the treatment plant would have adequate capacity to serve the proposed project. The impact would be **less than significant**.

d) Would the project generate solid waste in excess of state or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?

The proposed project would include construction of new improvements at the project site that would consist of a total of 15,644 square feet of nonresidential construction. Both construction and operation of the project would generate solid waste requiring offsite disposal.

Solid waste from the City is primarily disposed at the Forward Sanitary Landfill, located northeast of Manteca. Other landfills used include Foothill Sanitary and North County. The Forward Landfill has a remaining capacity of 24,720,669 cubic yards, which, on average, equates to approximately 2.78 million tons (CalRecycle 2022a).

Operation of the proposed project would increase solid waste generation at the site, and an average for commercial land uses of 2.5 pounds per 100 square feet per day would result in an estimated volume of 400 pounds per day, equating to 145,606 pounds per year or 72.8 tons per year (CalRecycle 2022b). The

Forward Landfill is expected to reach full capacity in January 2036. The Forward Landfill has adequate capacity to accommodate the solid waste anticipated from the project and with the other available landfills in the region, and should be able to accept waste from the project for the life of the project.

Therefore, solid waste impacts resulting from construction and operation of the project would be **less than significant**.

e) Would the project comply with federal, state, and local management and reduction statutes and regulations related to solid waste?

The proposed project would comply with existing or future statutes and regulations, including waste diversion programs mandated by federal and state law. The proposed project would not result in an excessive production of solid waste that would exceed the capacity of the Forward Landfill, which is the existing landfill serving the project site. In addition, the Forward Landfill complies with its permit issued by California Department of Resources Recycling and Recovery and the City's Local Enforcement Agency (CalRecycle 2022a). The project does not contain any uses that would generate a substantial increase in solid waste and construction debris would be disposed of in accordance with applicable regulations. For these reasons, the proposed project would result in a **less-than-significant impact** related to federal, state, and local statutes and regulations related to solid waste.

3.20 Wildfire

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
XX. WILDFIRE – If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project:				
a) Substantially impair an adopted emergency response plan or emergency evacuation plan?	☐	☐	☐	☒
b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?	☐	☐	☒	☐
c) Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?	☐	☐	☒	☐
d) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?	☐	☐	☒	☐.

a) Would the project substantially impair an adopted emergency response plan or emergency evacuation plan?

As discussed in Section 3.9, Hazards and Hazardous Materials, the proposed project would not interfere with any emergency response plans or emergency evacuation plans. Fire suppression services in the project area are currently and would continue to be provided by the MFD. The project does not propose any permanent road closures, lane reductions, or other adverse circulation conditions that may adversely affect emergency response or evacuation in the project vicinity. Additionally, project plans are required to be submitted to the MFD for review and approval to ensure that emergency access is sufficient at the site and compliant with California Fire Code requirements. Therefore, the project would have **no impact** related to implementation of emergency plans.

b) Due to slope, prevailing winds, and other factors, would the project exacerbate wildfire risks, and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?

The project site contains flat, undeveloped land. The project is located near agricultural or other open space parcels but is in an area being increasingly developed with urban uses. The project is within a Local Responsibility Area and is not designated as a Very High Fire Hazard Safety Zone by CAL FIRE. The closest zones are located more than 16 miles away, south of the City of Tracy (CAL FIRE 2022). Therefore, it is

unlikely that the proposed project would expose people or structures to a significant risk of loss, injury or death involving wildland fires. The project would also be constructed consistent with California Fire Code requirements for fire prevention as directed by MFD's preliminary review.

The proposed project would require handling of flammable materials, such as gasoline and diesel fuel. However, the proposed project would be required to operate in compliance with all with applicable federal, state, and local requirements that regulate gas stations, which would lessen the potential for fire hazards. This would include Section 2540.7 of the California Occupational Safety and Health Administration Regulations (Gasoline Dispensing and Service Stations) and Chapter 38 of the California Fire Code (Liquefied Petroleum Gases).

For the reasons above, the proposed project would have a **less-than-significant impact** regarding wildfire hazards.

c) Would the project require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines, or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?

The project would require electrical wiring and utility extensions; however, this would not require any extensive installation or maintenance that would exacerbate fire risk as the project site is located in an area that is already served by existing utilities. As discussed above, the proposed project would comply with all applicable federal, state, and local requirements that regulate gas stations, which would lessen the potential for fire hazards. Therefore, the project would have a **less-than-significant impact** regarding fire risk associated with new infrastructure.

d) Would the project expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?

The project site is flat and does not contain a significant risk of flooding, landslides, slope instability, or drainage changes. As noted in Section 3.7, Geology and Soils, and Section 3.10, Hydrology and Water Quality, the project would have **less-than-significant impacts** regarding landslides and flooding, and would not expose people or structures to significant risks in the event of a post-fire situation.

3.21 Mandatory Findings of Significance

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
XXI. MANDATORY FINDINGS OF SIGNIFICANCE				
a) Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal, or eliminate important examples of the major periods of California history or prehistory?	☐	☒	☐	☐
b) Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects.)	☐	☒	☐	☐
c) Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?	☐	☒	☐	☐.

a) ***Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal, or eliminate important examples of the major periods of California history or prehistory?***

As discussed in Section 3.4, Biological Resources, the project would potentially impact native and migratory birds nesting at the time of project construction. However, implementation of MM-BIO-1 would require scheduling of vegetation removal outside of breeding seasons, or would require nesting bird surveys and/or suitable buffers for construction, which would reduce this impact to less than significant. The project may also impact unanticipated archaeological resources or human remains during ground-disturbing activities; however, implementation of the management recommendations in MM-CUL-1 and MM-CUL-2 would reduce these impacts to less than significant. Therefore, impacts would be **less than significant with mitigation incorporated**.

b) Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects.)

The analysis provided throughout this document demonstrates that the project's contribution to any existing cumulative impacts would be reduced to less-than-significant levels through mitigation and any contribution to an existing cumulative impact would be very small and would not be considered cumulatively considerable. Therefore, the project's cumulative impact would be **less than significant with mitigation incorporated**.

c) Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?

The analysis provided throughout this document identifies project impacts that may be potentially significant and identifies mitigation measures that would reduce each impact to a less-than-significant level. Impacts from the project that would cause substantial adverse effects on human beings, such as air quality, greenhouse gases, wildfire, or hazards and hazardous materials, would all be less than significant both with mitigation and without as identified in this IS/MND. As such, the impact is **less than significant with mitigation incorporated**.

Airport Plaza Detailed Report

Table of Contents

1. Basic Project Information

1.1. Basic Project Information

1.2. Land Use Types

1.3. User-Selected Emission Reduction Measures by Emissions Sector

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

2.2. Construction Emissions by Year, Unmitigated

2.4. Operations Emissions Compared Against Thresholds

2.5. Operations Emissions by Sector, Unmitigated

3. Construction Emissions Details

3.1. Site Preparation (2023) - Unmitigated

3.3. Grading (2023) - Unmitigated

3.5. Building Construction (2023) - Unmitigated

3.7. Building Construction (2024) - Unmitigated

3.9. Paving (2024) - Unmitigated

3.11. Architectural Coating (2024) - Unmitigated

4. Operations Emissions Details

4.1. Mobile Emissions by Land Use

4.1.1. Unmitigated

4.2. Energy

4.2.1. Electricity Emissions By Land Use - Unmitigated

4.2.3. Natural Gas Emissions By Land Use - Unmitigated

4.3. Area Emissions by Source

4.3.2. Unmitigated

4.4. Water Emissions by Land Use

4.4.2. Unmitigated

4.5. Waste Emissions by Land Use

4.5.2. Unmitigated

4.6. Refrigerant Emissions by Land Use

4.6.1. Unmitigated

4.7. Offroad Emissions By Equipment Type

4.7.1. Unmitigated

4.8. Stationary Emissions By Equipment Type

4.8.1. Unmitigated

4.9. User Defined Emissions By Equipment Type

4.9.1. Unmitigated

4.10. Soil Carbon Accumulation By Vegetation Type

4.10.1. Soil Carbon Accumulation By Vegetation Type - Unmitigated

4.10.2. Above and Belowground Carbon Accumulation by Land Use Type - Unmitigated

4.10.3. Avoided and Sequestered Emissions by Species - Unmitigated

5. Activity Data

5.1. Construction Schedule

5.2. Off-Road Equipment

5.2.1. Unmitigated

5.3. Construction Vehicles

5.3.1. Unmitigated

5.4. Vehicles

5.4.1. Construction Vehicle Control Strategies

5.5. Architectural Coatings

5.6. Dust Mitigation

5.6.1. Construction Earthmoving Activities

5.6.2. Construction Earthmoving Control Strategies

5.7. Construction Paving

5.8. Construction Electricity Consumption and Emissions Factors

5.9. Operational Mobile Sources

5.9.1. Unmitigated

5.10. Operational Area Sources

5.10.1. Hearths

5.10.1.1. Unmitigated

5.10.2. Architectural Coatings

5.10.3. Landscape Equipment

5.11. Operational Energy Consumption

5.11.1. Unmitigated

5.12. Operational Water and Wastewater Consumption

5.12.1. Unmitigated

5.13. Operational Waste Generation

5.13.1. Unmitigated

5.14. Operational Refrigeration and Air Conditioning Equipment

5.14.1. Unmitigated

5.15. Operational Off-Road Equipment

5.15.1. Unmitigated

5.16. Stationary Sources

5.16.1. Emergency Generators and Fire Pumps

5.16.2. Process Boilers

5.17. User Defined

5.18. Vegetation

5.18.1. Land Use Change

5.18.1.1. Unmitigated

5.18.1. Biomass Cover Type

5.18.1.1. Unmitigated

5.18.2. Sequestration

5.18.2.1. Unmitigated

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

6.2. Initial Climate Risk Scores

6.3. Adjusted Climate Risk Scores

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

7.2. Healthy Places Index Scores

7.3. Overall Health & Equity Scores

7.4. Health & Equity Measures

7.5. Evaluation Scorecard

7.6. Health & Equity Custom Measures

8. User Changes to Default Data

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	Airport Plaza
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	County
Windspeed (m/s)	3.40
Precipitation (days)	9.00
Location	37.82598192093727, -121.25301329734725
County	San Joaquin
City	Manteca
Air District	San Joaquin Valley APCD
Air Basin	San Joaquin Valley
TAZ	2160
EDFZ	4
Electric Utility	Pacific Gas & Electric Company
Gas Utility	Pacific Gas & Electric

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
Other Asphalt Surfaces	1.30	Acre	1.30	0.00	0.00	—	—	—
Parking Lot	108	Space	0.97	0.00	0.00	—	—	—

Fast Food Restaurant with Drive Thru	2.50	1000sqft	0.06	2,500	0.00	—	—	—
High Turnover (Sit Down Restaurant)	4.00	1000sqft	0.09	4,000	0.00	—	—	—
Convenience Market with Gas Pumps	16.0	Pump	0.05	2,259	28,750	—	—	—
Strip Mall	5.73	1000sqft	0.13	5,730	0.00	—	—	—

1.3. User-Selected Emission Reduction Measures by Emissions Sector

No measures selected

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit

Temperature and Extreme Heat	18.9	annual days of extreme heat
Extreme Precipitation	2.40	annual days with precipitation above 20 mm
Sea Level Rise	0.00	meters of inundation depth
Wildfire	13.4	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider different increments of sea level rise coupled with extreme storm events. Users may select from four model simulations to view the range in potential inundation depth for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 50 meters (m) by 50 m, or about 164 feet (ft) by 164 ft.
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	N/A	N/A	N/A	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A

Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	55.4
AQ-PM	53.4
AQ-DPM	42.7
Drinking Water	98.8
Lead Risk Housing	6.19

Pesticides	83.8
Toxic Releases	49.9
Traffic	36.1
Effect Indicators	—
CleanUp Sites	0.00
Groundwater	57.2
Haz Waste Facilities/Generators	50.1
Impaired Water Bodies	58.7
Solid Waste	88.9
Sensitive Population	—
Asthma	89.7
Cardio-vascular	92.6
Low Birth Weights	27.6
Socioeconomic Factor Indicators	—
Education	41.6
Housing	7.69
Linguistic	13.3
Poverty	22.9
Unemployment	66.6

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	62.8127807
Employed	49.30065443
Median HI	67.57346336

Education	—
Bachelor's or higher	43.80854613
High school enrollment	100
Preschool enrollment	4.478378032
Transportation	—
Auto Access	67.17567047
Active commuting	20.54407802
Social	—
2-parent households	79.73822661
Voting	83.58783524
Neighborhood	—
Alcohol availability	91.6078532
Park access	39.76645708
Retail density	9.534197357
Supermarket access	30.77120493
Tree canopy	56.25561401
Housing	—
Homeownership	89.79853715
Housing habitability	88.99011934
Low-inc homeowner severe housing cost burden	87.11664314
Low-inc renter severe housing cost burden	80.39266008
Uncrowded housing	80.21301168
Health Outcomes	—
Insured adults	73.18105993
Arthritis	11.5
Asthma ER Admissions	7.7
High Blood Pressure	9.1

Cancer (excluding skin)	12.2
Asthma	51.9
Coronary Heart Disease	19.3
Chronic Obstructive Pulmonary Disease	35.3
Diagnosed Diabetes	55.5
Life Expectancy at Birth	42.2
Cognitively Disabled	60.3
Physically Disabled	27.7
Heart Attack ER Admissions	16.8
Mental Health Not Good	66.0
Chronic Kidney Disease	35.4
Obesity	44.4
Pedestrian Injuries	70.8
Physical Health Not Good	60.5

2016 Voting	83.2

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	65.0
Healthy Places Index Score for Project Location (b)	57.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	Yes
Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Construction: Construction Phases	No demolition.
Construction: Trips and VMT	Odd trips rounded up to account for whole round trips.
Operations: Vehicle Data	Based on traffic report.

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit

Temperature and Extreme Heat	18.9	annual days of extreme heat
Extreme Precipitation	2.40	annual days with precipitation above 20 mm
Sea Level Rise	0.00	meters of inundation depth
Wildfire	13.4	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider different increments of sea level rise coupled with extreme storm events. Users may select from four model simulations to view the range in potential inundation depth for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 50 meters (m) by 50 m, or about 164 feet (ft) by 164 ft.
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	N/A	N/A	N/A	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	N/A	N/A	N/A	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	55.4
AQ-PM	53.4
AQ-DPM	42.7
Drinking Water	98.8
Lead Risk Housing	6.19

Pesticides	83.8
Toxic Releases	49.9

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	65.0
Healthy Places Index Score for Project Location (b)	57.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	Yes
Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Construction: Construction Phases	No demolition.
Construction: Trips and VMT	Odd trips rounded up to account for whole round trips. Onsite emissions only.
Operations: Vehicle Data	Based on traffic report. Onsite emissions only.

MEMORANDUM

To:	Paul Kamboj, Two Guys Food and Fuel
From:	Adam Poll, Dudek
Subject:	Refined Health Risk Assessment for the Manteca Gas Station Project
Date:	March 21, 2023
Attachments:	A – Emission Calculations
	B – AERMOD and HARP Modeling Files

1 Introduction

1.1 Purpose

Dudek prepared a health risk assessment (HRA) modeling analysis to estimate health risk impacts on proximate sensitive receptors from exposure to toxic air contaminant (TAC) emissions from operation of the proposed Manteca Gas Station project (proposed project) located at the southeast corner of S. Airport Way and W. Lathrop Road, Manteca, CA 95336. The project is currently in the design review phase with the City of Manteca (City).

The analysis in this HRA uses air dispersion modeling methodology to evaluate potential public health risks associated with the project. Results of the modeling analysis are compared with the most recent significance thresholds established by the San Joaquin Valley Air Pollution Control District (SJVAPCD) in accordance with the SJVAPCD's *Guidelines for Air Dispersion Modeling* (SJVAPCD 2006) and *Update to District's Risk Management Policy to Address OEHHA's Revised Risk Assessment Guidance Document* (SJVAPCD 2015).

1.2 Facility Information

Stationary Source Name: Manteca Gas Station Project

Stationary Source Identification Number (SSID): NA

Location: southeast corner of N. Airport Way and E. Lathrop Road, Manteca

All facility names and facility identification numbers (FIDs) associated with the stationary source: NA

Location (street address and UTM coordinates, including datum): southeast corner of N. Airport Way and E. Lathrop Road, Manteca, CA 95336; (653749.84 m E, 4187940.04 m N); WGS84.

The boundary locations for the facility are provided in Attachment A. The property boundary coordinates were used to set up the receptor grid for dispersion modeling.

Description of stationary source operations: The proposed project consists of a convenience store, fueling pumps, car wash, quick-serve restaurant, and retail. The fueling station includes 8 dispensers with 16 fueling positions, dispensing regular and supreme grades of gasoline and diesel.

Plot plan of stationary source: See Figure 1 for the plot plan and the aerial map Figure 2 for the project site.

2 Source and Emission Inventory Information

The California Air Resources Board (CARB) *Gasoline Service Station Industrywide Risk Assessment Technical Guidance* was relied upon to estimate emissions from the project (CARB 2022a). The guidance document provides emission factors for estimating total organic gases (TOG) from the project along with toxic air contaminant (TAC) speciation. TOG emissions were estimated for loading, breathing, refueling, spillage, and hose permeation. It was assumed that the proposed project would have an EVR hose type. The fueling emissions factor was scaled based on the default percentage of vehicles with and without on-board refueling vapor recovery (ORVR) (83% ORVR and 17% non-ORVR). The annual and maximum hourly emissions were estimated using the toxic weight percentages in Tables 11 and 12 of CARB's guidelines (CARB 2022a). As the proposed project would have an annual throughput of approximately 2.1 million gallons per year, the Phase II hourly throughput of 700 gallons per hour was assumed. Table 1 shows the estimated annual and maximum hourly emissions for the project by source. Detailed emission calculations are provided in Attachment A. It should be noted that only toxic air contaminants with an acute reference exposure level were estimated for maximum hourly emissions.

Table 1. Emissions Inventory

Source	TOG	Benzene	Ethyl Benzene	n-Hexane	Naphthalene	Propylene	Toluene	Xylenes
Annual Emissions (lb/year)								
Loading	3.10E+02	1.41E+00	3.31E-01	5.63E+00	5.63E+00	1.11E-02	3.44E+00	1.27E+00

Notes: lb/hr = pound per hour; lb/year = pound per year; NA = not applicable; TOG = total organic gases.

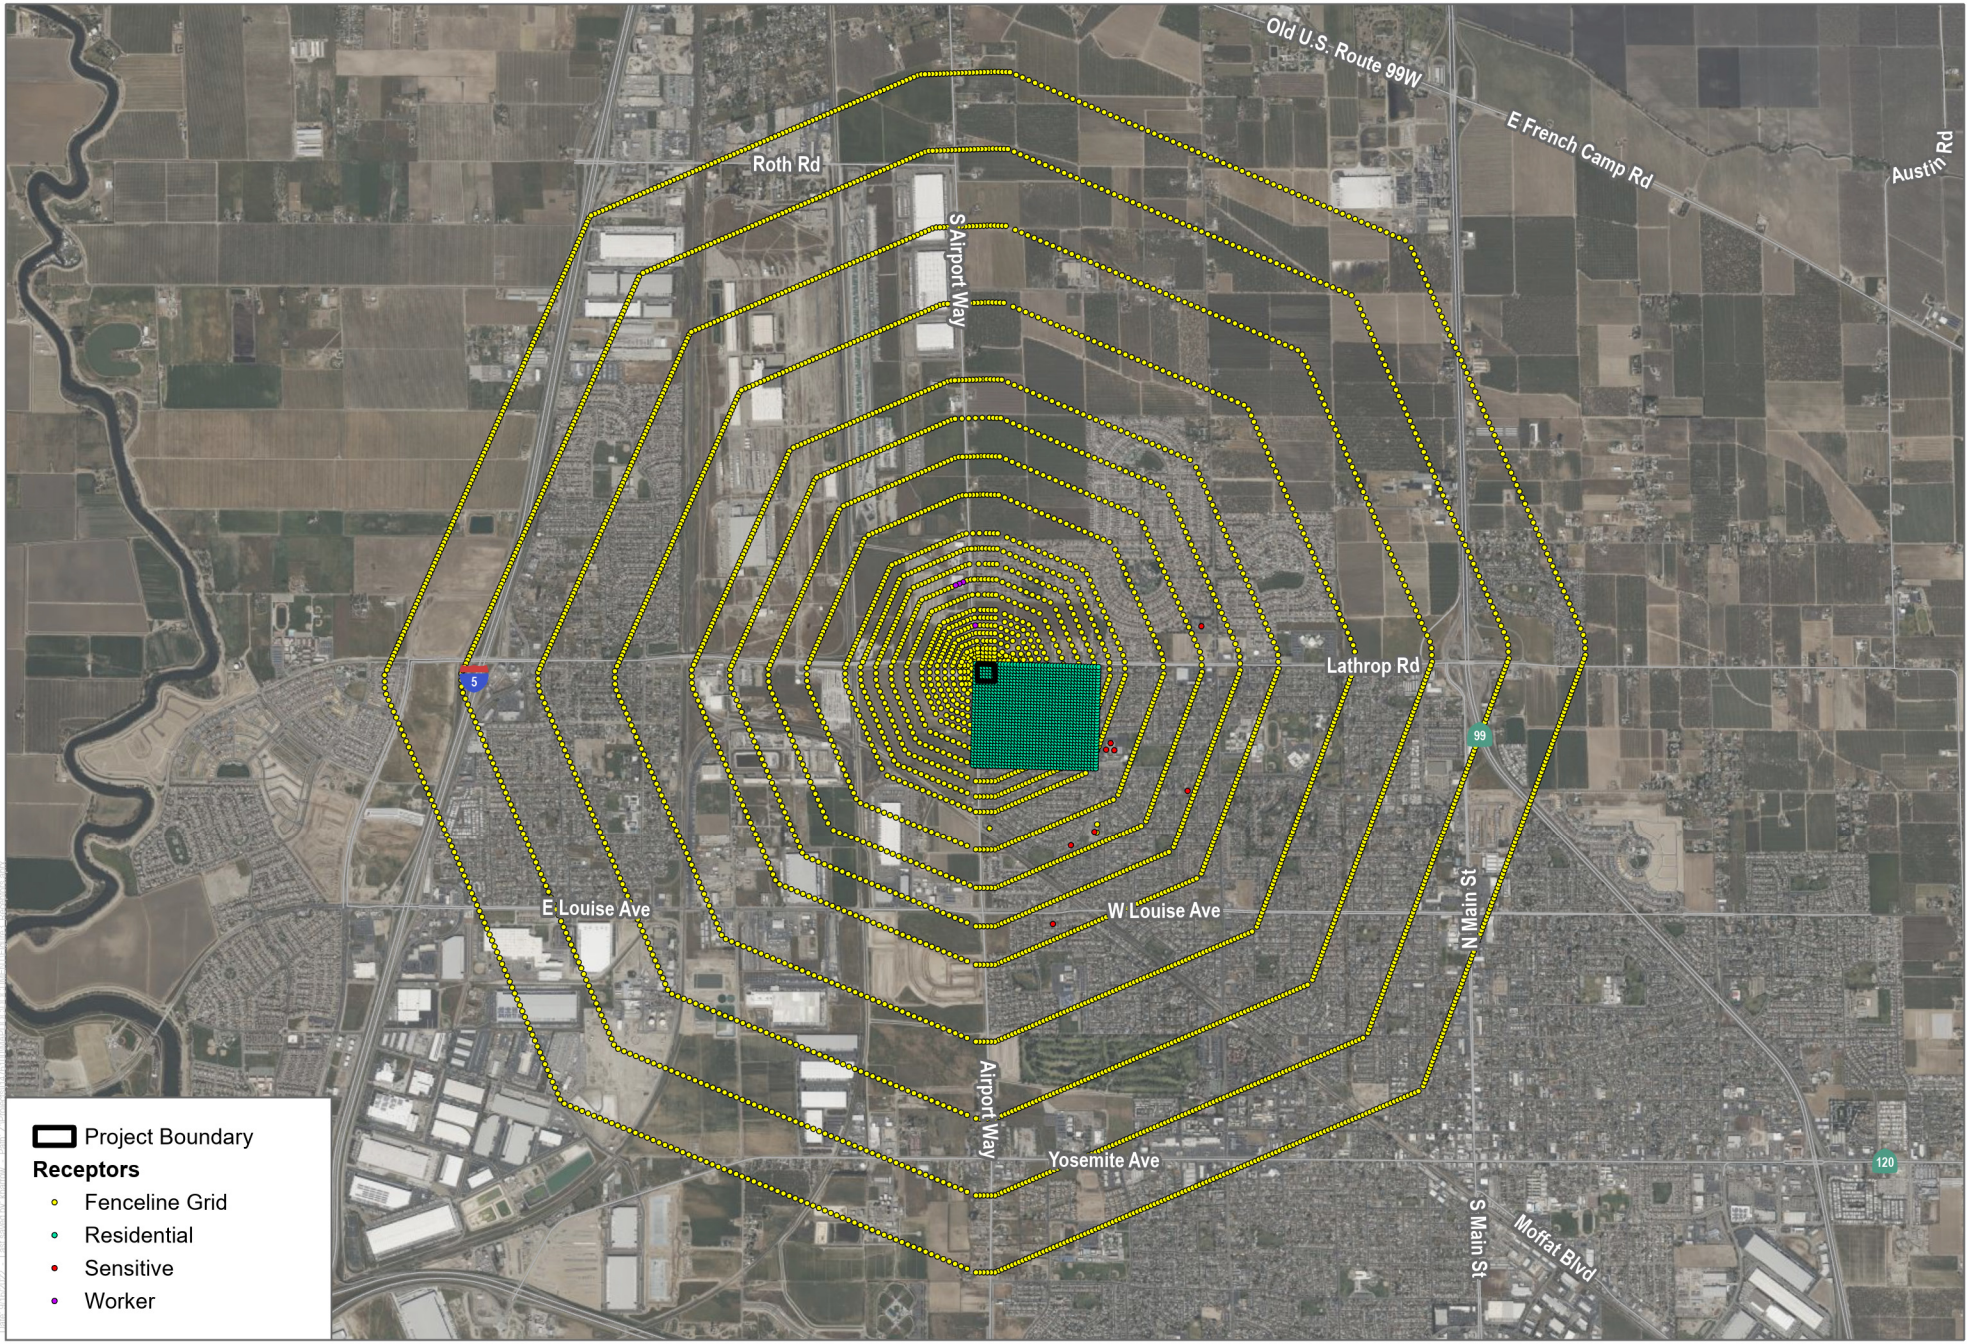
3 Modeling Methodology

The dispersion modeling was performed using American Meteorological Society/U.S. Environmental Protection Agency Regulatory Model (AERMOD) View Version 11.0.1, which is the model SJVAPCD recommends for atmospheric dispersion of emissions. AERMOD is a steady-state Gaussian plume model that incorporates air dispersion based on planetary boundary layer turbulence structure and scaling concepts, including treatment of surface and elevated sources, building downwash, and simple and complex terrain (EPA 2017). The health database version 22118 was used in HARP2 (CARB 2022b). The AERMOD modeling parameters were based on the CARB Guidance (CARB 2022). Table 2 provides the principle modeling parameters used in the assessment. All available electronic input and output files associated with the AERMOD and HARP2 modeling was included in Attachment B.

Table 2. American Meteorological Society/Environmental Protection Agency Regulatory Model Principle Parameters

Parameter	Details
Meteorological Data	AERMOD-specific meteorological data for the Stockton Airport air monitoring station (23237) was used for the dispersion modeling. A 5-year meteorological data set from 2013 through 2017 was obtained from the SJVAPCD in a preprocessed format suitable for use in AERMOD (SJVAPCD 2021).
Urban versus Rural Option	Rural dispersion option was selected due to the undeveloped nature of the Project area and per SJVAPCD guidelines.
Terrain Characteristics	The elevation of the site is 26 feet above sea level and the surrounding area is predominantly flat.
Elevation Data	Digital elevation data were imported into AERMOD and elevations were assigned to receptors and emission sources, as necessary. Digital elevation data were obtained through the AERMOD View in the United States Geological Survey's National Elevation Dataset format with a resolution of 1/3 degree (approximately 10 meters), consistent with the SJVAPCD guidance (SJVAPCD 2006).
Source Release Characterizations	Loading and breathing emissions from the vent stack were modeled as point sources with a release height of 3.66 meters, stack diameter of 0.0508 meters, exit velocity of 0.001 meters per second, and temperature (291 K for loading and 289 K for breathing) (CARB 2022a). Fueling and hose permeation emissions were modeled as volume sources with height of 4 meters, width and length of 13 meters, and release height of 1.5 meters. Spillage emissions were modeled as volume sources with height of 4 meters, width and length of 13 meters, and release height of 1 meter.
Regulatory Options	Default regulatory options were used in AERMOD.
Building Downwash	Building downwash was incorporated for the proposed buildings onsite using the BPIP-PRIME within AERMOD.

Note: See Attachment B.



Cancer risk is defined as the increase in probability (chance) of an individual developing cancer due to exposure to a carcinogenic compound, typically expressed as the increased chances in one million. Maximum Individual Cancer Risk is the estimated probability of a maximally exposed individual potentially contracting cancer as a result of exposure to TACs over a period of 70 years for residential receptor locations and 40 years for worker locations (SJVAPCD 2015). Cancer risk less than 20 in 1 million means that adverse health effects are not expected. The deposition rate of 0.02 meters per second was used (SJVAPCD 2015). Due to the proximity to agricultural land uses, in addition to the inhalation,

soil ingestion, dermal, and mothers milk pathways, the homegrown produce, beef, dairy cows, pigs, chickens, and eggs pathways were included in HARP2. For the inhalation pathway, the fraction of time at home was not included. The "households that farm" option was selected for the homegrown produce, beef, dairy cows, pigs, chickens, and eggs pathways.

The SJVAPCD has also established noncarcinogenic risk parameters for use in HRAs since some TACs increase noncancerous health risk due to long-term (chronic) exposures and some TACs increase noncancerous health risk due to short-term (acute) exposures. Chronic exposure is evaluated in the construction HRA. Noncarcinogenic risks are quantified by calculating a hazard index, expressed as the ratio between the ambient pollutant concentration and its toxicity or REL, which is a concentration at or below which health effects are not likely to occur. The chronic hazard index is the sum of the individual substance chronic hazard indices for all TACs affecting the same target organ system. The acute hazard index is the sum of the individual substance acute hazard indices for all TACs affecting the same target organ system. A hazard index less of than one (1.0) means that adverse health effects are not expected.

4 Receptors Used for Evaluating Modeled Impacts

Some land uses are considered more sensitive to changes in air quality than others, depending on the population groups and the activities involved. People most likely to be affected by air pollution include children, the elderly, athletes, and people with cardiovascular and chronic respiratory diseases. Facilities and structures where these air pollution-sensitive people live or spend considerable amounts of time are known as sensitive receptors. Land uses where air-pollution-sensitive individuals are most likely to spend time include schools and schoolyards, parks and playgrounds, daycare centers, nursing homes, hospitals, and residential communities (sensitive sites or sensitive land uses) (CARB 2005). SJVAPCD considers schools, daycare centers, hospitals, care facilities (adult/elderly), and residences within 2 kilometers (1.2 miles) of the facility as sensitive receptor land uses (SJVAPCD 2006). The closest sensitive receptor to the project site are future residences adjacent to the eastern and southern boundary of the property. The site is located within a residential and agricultural area and the predominant receptor type is residential within 2 kilometers. There are also worker receptors within 2 kilometers of the site. A fenceline grid of 25 meter spacing was created out to 100 meters; 50 meter spacing out to 200 meters; 100 meter spacing out to 500 meters; 250 meter spacing out to 1,000 meters; and 500 meter spacing out to 2,000 meters. Additional uniform cartesian grids were placed over residential receptors of 20 meter spacing out to 650 meters from the property. The following sensitive receptors were identified within 2 kilometers of the site: The Commons at Union Ranch, George Mc Parland School, East Union High School, Kimball Place Daycare, Lyrics & Legos Childcare, Busy Bee's Daycare, and Vu's WeeCare. Figure 3 shows the residential, worker, and sensitive receptors within 2,000 meters of the site.

6 Isopleth Maps and Aerial Photos

As shown in Tables 2 through 5 in Section 5, the non-cancer risk (chronic and 8-hour chronic) did not exceed 0.1. The cancer risk exceeded 1 in 1 million and the PMI and the acute non-cancer risk exceeded 0.1 at the PMI. As such, an isopleth for cancer risk over 1 in 1 million is shown in Figure 4 and acute non-cancer risk over 0.1 is provided below as Figure 5.

7 Conclusions

As shown in Section 5, the results of the HRA are less than significant for the operation of the proposed project. The AERMOD and HARP 2 outputs are contained in Attachment B. Based on this analysis, the residential and worker receptors in close proximity to the project would not be exposed to TACs at levels above significance thresholds established by SJVAPCD.

The results determined in this analysis reflect reasonable estimates of source emissions and exhaust characteristics, available meteorological data near the project site, and the use of currently approved air quality models. Given the limits of available tools for such an analysis, the actual impacts may vary from the estimates in this assessment. However, the combined use of the AERMOD dispersion model and the health impact calculations required by OEHHA and SJVAPCD tend to over-predict impacts such that they produce conservative (i.e., health-protective) results. Accordingly, the health impacts are not expected to be higher than those estimated in this assessment.

As such, the proposed project would not result in significant impacts to proximate residential and worker receptors.

Sincerely,

Adam Poll, QEP, LEED AP BD+C
Senior Air Quality Specialist

 **Model Is Setup For Calculation of Average CONCentration Values.

   --  DEPOSITION LOGIC  --
 **NO GAS DEPOSITION Data Provided.
 **NO PARTICLE DEPOSITION Data Provided.
 **Model Uses NO DRY DEPLETION.  DRYDPLT  =  F
 **Model Uses NO WET DEPLETION.  WETDPLT  =  F

 **Model Uses RURAL Dispersion Only.

 **Model Uses Regulatory DEFAULT Options:
        1. Stack-tip Downwash.
        2. Model Accounts for ELEVated Terrain Effects.
        3. Use Calms Processing Routine.
        4. Use Missing Data Processing Routine.
        5. No Exponential Decay.

 **Other Options Specified:
        ADJ_U*   - Use ADJ_U* option for SBL in AERMET
        CCVR_Sub - Meteorological data includes CCVR substitutions
        TEMP_Sub - Meteorological data includes TEMP substitutions

 **Model Assumes No FLAGPOLE Receptor Heights.

 **The User Specified a Pollutant Type of:  VOCS

 **Model Calculates  1 Short Term Average(s) of:   1-HR
     and Calculates PERIOD Averages

 **This Run Includes:      8 Source(s);       5 Source Group(s); and    6174
Receptor(s)

                with:      2 POINT(s), including
                           0 POINTCAP(s) and      0 POINTHOR(s)
                 and:      6 VOLUME source(s)
                 and:      0 AREA type source(s)
                 and:      0 LINE source(s)
```

```
                and:      0 RLINE/RLINEXT source(s)
                and:      0 OPENPIT source(s)
                and:      0 BUOYANT LINE source(s) with a total of     0 line(s)

 **Model Set To Continue RUNning After the Setup Testing.

 **The AERMET Input Meteorological Data Version Date:  18081

 **Output Options Selected:
          Model Outputs Tables of PERIOD Averages by Receptor
          Model Outputs Tables of Highest Short Term Values by Receptor (RECTABLE
Keyword)
          Model Outputs External File(s) of High Values for Plotting (PLOTFILE
Keyword)
          Model Outputs Separate Summary File of High Ranked Values (SUMMFILE
Keyword)

 **NOTE:  The Following Flags May Appear Following CONC Values:  c for Calm Hours
                                                                 m for Missing Hours
                                                                 b for Both Calm and
Missing Hours

 **Misc. Inputs:  Base Elev. for Pot. Temp. Profile (m MSL) =     7.90 ;  Decay
Coef. =    0.000     ;  Rot. Angle =     0.0
                 Emission Units = GRAMS/SEC                                 ;
Emission Rate Unit Factor =   0.10000E+07
                 Output Units   = MICROGRAMS/M**3

 **Approximate Storage Requirements of Model =      5.3 MB of RAM.

- - - - - - - - - - - - - - - - - - - - -

 **Model Is Setup For Calculation of Average CONCentration Values.

   --  DEPOSITION LOGIC  --
 **NO GAS DEPOSITION Data Provided.
 **NO PARTICLE DEPOSITION Data Provided.
 **Model Uses NO DRY DEPLETION.  DRYDPLT  =  F
 **Model Uses NO WET DEPLETION.  WETDPLT  =  F

 **Model Uses RURAL Dispersion Only.

 **Model Uses Regulatory DEFAULT Options:
        1. Stack-tip Downwash.
        2. Model Accounts for ELEVated Terrain Effects.
        3. Use Calms Processing Routine.
        4. Use Missing Data Processing Routine.
        5. No Exponential Decay.

 **Other Options Specified:
        ADJ_U*   - Use ADJ_U* option for SBL in AERMET
        CCVR_Sub - Meteorological data includes CCVR substitutions
        TEMP_Sub - Meteorological data includes TEMP substitutions

 **Model Assumes No FLAGPOLE Receptor Heights.

 **The User Specified a Pollutant Type of:  VOCS

 **Model Calculates  1 Short Term Average(s) of:   1-HR
    and Calculates PERIOD Averages
```

```
 **This Run Includes:      8 Source(s);       5 Source Group(s); and    6174
Receptor(s)

                with:      2 POINT(s), including
                           0 POINTCAP(s) and      0 POINTHOR(s)
                 and:      6 VOLUME source(s)
                 and:      0 AREA type source(s)
                 and:      0 LINE source(s)
                 and:      0 RLINE/RLINEXT source(s)
                 and:      0 OPENPIT source(s)
                 and:      0 BUOYANT LINE source(s) with a total of     0 line(s)

 **Model Set To Continue RUNning After the Setup Testing.

 **The AERMET Input Meteorological Data Version Date:  18081

 **Output Options Selected:
          Model Outputs Tables of PERIOD Averages by Receptor
          Model Outputs Tables of Highest Short Term Values by Receptor (RECTABLE
Keyword)
          Model Outputs External File(s) of High Values for Plotting (PLOTFILE
Keyword)
          Model Outputs Separate Summary File of High Ranked Values (SUMMFILE
Keyword)

 **NOTE:  The Following Flags May Appear Following CONC Values:  c for Calm Hours
                                                                 m for Missing Hours
                                                                 b for Both Calm and
Missing Hours

 **Misc. Inputs:  Base Elev. for Pot. Temp. Profile (m MSL) =     7.90 ;  Decay
Coef. =    0.000     ;  Rot. Angle =     0.0
                  Emission Units = GRAMS/SEC                                ;
Emission Rate Unit Factor =   0.10000E+07
                  Output Units   = MICROGRAMS/M**3

 **Approximate Storage Requirements of Model =      5.3 MB of RAM.

 **Input Runstream File:          aermod.inp

 **Output Print File:             aermod.out

 **Detailed Error/Message File:   Manteca Gas Station AERMOD.err

 **File for Summary of Results:   Manteca Gas Station AERMOD.sum
